Trouble strikes Altergo Ireland

by George Black
and John Kavanagh

ALTERGO Ireland, subsidiary of the British software house which went into liquidation last year, is in deep trouble again.

It has laid off all 65 of its Dublin workers and expects to call in the official receiver this week.

One of its directors, Frank Muxted, says: "If we haven't got any staff to work with, you can draw your own conclusions about what may happen."

Its managing director, Niall Cugan, is in Kuwait trying to negotiate its £1½ million contract with United Arab Shipping Company. This was the major job that Cord Designs of Stevenage inherited when it took a 67% stake in Altergo Ireland after its parent company crashed last year.

Altero Ireland was an export-only concern, but Cord is hoping to set up an office called Omnimark to sell both in Ireland and overseas.

London venture capitalist Innotech, backed by supermarket tycoon David Sainsbury, had a row.

The system turned out to be more complicated than expected and ran into costly delays. Cord's management is said to have felt that the financial position of the firm was worse than it had been led to believe at the time of the takeover.

Cord also took over a £1.8 million contract for Saudi airline involving 22 staff, but this is believed to be unaffected, as it is handled by Cord in England.

Cord Investments board chairman Michael Kaufman was unavailable for comment. His marketing director, Gerald Penney, quit last autumn. Three top managers left Altergo Ireland in May shortly after the takeover: David Joice, Stephen North and Philip Devonport walked out after a row.

BELL... "Barriers for entering business are negligible."

Apple gives assurances to Office of Fair Trading

APPLE has given the Office of Fair Trading an assurance that it will not try to maintain resale prices for its computers. It has told its retailers that they can sell at whatever prices they choose.

The case arose from a complaint to the Office of Fair Trading by an Apple dealer that the micro maker had withheld supplies because of discounting. An Office of Fair Trading spokesman says that on investigation it found that Apple was attempting to maintain retail prices. But it now accepts Apple's undertaking to stop doing so.

Apple's UK managing director, Peter Cobb, says the firm has nothing to be embarrassed about.

"The Office of Fair Trading asked us questions and we answered them. I can't say whether they exonerated us or not, but they seemed happy with our assurances."

We have not altered our dealer agreement as a result."

The Office is also investigating several other complaints of the same kind, including one against Commodore by London retailer Crestmat. It says Commodore has forbidden discounting on the Vic 24, which Commodore has denied.

Many of the company's most successful minicomputers. He is now chief technical officer at Encore Computer Corp.

His talk at the BCS/Computer Weekly lecture, which will take place on Wednesday, March 14 at the Royal Society in London, will deal with computer evolution.

Further details on the lecture can be obtained from Kate Norman, BCS. Tel: 01-637 0421.

COBB... "They seemed happy."

The reason, says Bell, is that while high density semiconductor and magnetic recording products are clearly high technology, systems assembled from these components are clearly not. As a result, the barriers for entering an end-user OEM or system level business with a generic product are negligible.

All that is needed is someone who can buy and assemble the various circuit boards into a multibus backplane, and a programmer to buy and load a version of Unix, and one or two helpers.

The result, he continues, "is surely one of the largest corporate re-evaluations in the history of business. The only barrier to entering the industry as a board, software, or system supplier is having a personal computer capable of generating a business plan."

Bell until recently was vice-president, engineering, for Digital Equipment Corp. While at DEC, he was involved in the design of

Skill shortage holds back micros

From front page

In the UK there has gone to foreign owned factories, with over 60% using them in processes and 20% in products. This compares to 40% and 10% for factories owned by UK groups and 15% and 3% for UK independents.

Product applications are limited to few industries, particularly engineering, while process applications are more widely but irregularly distributed. The proportion of users is about twice as high in printing and paper as in textiles and clothing.

Introducing microelectronics has only had a marginal effect on the general economic situation for

their failure to get into new technology. Other difficulties were: lack of people with microelectronic expertise (39%); high costs of development (29%); and lack of finance for development (30%).

About 50% of firms were aware of the various government support schemes to encourage use of microelectronics. In particular nearly 50% had heard of the Department of Trade and Industry's Microelectronics Applications Project (MAP).

Concerns in British industry, The Faraday Group, Jim Norcross and Peter Rogers, available from the Policy Studies Institute, 12 Castle Street, London SW1A 2BZ, Registered at the GPO as a newspaper.

Swindlers get 12 years

by John Riley

TWO high-tech swindlers were jailed for a total of 12 years at Old Bailey last week for trying to rob a City bank of over £3 million.

The fraud was a simple one. Laurence Tomsett, 33, teleoperator at the Credit Suisse First Boston Bank in Bishopsgate, was jailed for five years, and bogus telex to switch \$1 million from the Morgan Guaranty Trust in New York to his accomplice's Swiss bank account.

He then tried to cover his tracks by destroying all evidence of the bogus message.

He "interfered" with the M6100 computer which interfaced with the telex machine and removed the telex ribbon.

The scheme had been aimed at the message to arrive on American Thanksgiving Day when all the banks were closed and it was no good for checks to be made.

A non-profit company will be set up to coordinate the venture.

However, art and gold dealer Colin Howard, aged 51, who had three previous convictions for deception and who was subsequently imprisoned for seven years, aroused suspicion in Greater London when he turned up with a suitcase to collect the cash.

Professor John Sparkes,

seconded from the Open University to get the scheme started, began work last week. He is expected to convene a conference of all interested parties in the summer.

Trade and Industry Secretary Norman Tebbit said in a paper submitted last week to the National Economic Development Council (NEDO) that the UK lags behind its main industrial competitors in terms of output of trained engineers and technologists, and in

introductory courses through to "talking heads" lectures on specialist subjects. Bob Kowalski of Imperial College has already agreed to do one on artificial intelligence.

Oakley has been critical of government spending cuts in higher education, which he believes will result in serious computing manpower shortages over the next three years. "It is too late to avert a serious crisis over the next three years now," Oakley says, "but if the government is serious about the sunrise industries, it must do something urgently so we have enough people by the end of the decade."

The cut in grants for higher education imposed in 1982 means, however, that the output of computing graduates from universities will start to fall next year. Oakley estimates that computer industry firms alone will need at least 8% more graduates each year on average.

Some big firms are asking for around 50% more computing graduates during 1984, he says.

See News Analysis, page 9, and Leader Comment, page 15.

OAKLEY... "It is too late to avert a serious crisis."

ACT wins right to make Victor

by John Riley

THE \$30 million turnover UK micro firm ACT has all but won in its bid to take over the remnants of the \$130 million US micro maker Victor Technologies. Bankrupt Victor now wants to sell the manufacturing and marketing rights outside North America for its Victor 9000/Sirius micro to Birmingham-based ACT, in a deal estimated at around \$16 million.

But the deal cannot be signed by Victor, which filed for Chapter 11 protection early in February, for seven weeks yet. Details have to be agreed by the US federal bankruptcy court and others.

An ACT spokesman says that under the proposed agreement with Victor, ACT would be free to

FOSTER... Confident.

manufacture Victor personal computers anywhere in the world and would have worldwide distribution rights apart from in the US.

The Victor machine will continue to be sold in the US, but not by ACT, adds marketing manager John Leftwich.

Germans apply five-year plan

by John Riley

WEST Germany is about to embark on a five year £650 million national programme in information technology. Unlike the Alvey initiative and the European Esprit programmes, which are geared towards fundamental research, the German programme concentrates on applications.

The main areas covered by the programme, which was undergoing approval by the German Cabinet yesterday (Wednesday), are microelectronics, telecommunications and computing.

The German government will contribute DM 500 million (£130 million) a year to the programme, and 80% of that cash will be new money, according to Dr Gerhard Reckel, head of the data processing section of West Germany's Electrical Industry Association (ZVEI).

The deal cannot be signed by Victor, which filed for Chapter 11 protection early in February, for seven weeks yet. Details have to be agreed by the US federal bankruptcy court and others.

The Victor machine will continue to be sold in the US, but not by ACT, adds marketing manager John Leftwich.

An ACT spokesman says that under the proposed agreement with Victor, ACT would be free to

make Victor personal computers anywhere in the world and would have worldwide distribution rights apart from in the US.

The Victor machine will continue to be sold in the US, but not by ACT, adds marketing manager John Leftwich.

TEBBIT... "US strains at every gnat but allows horns through."

Tebbit urges UK independence

by George Black

TRADE and Industry Secretary of State Norman Tebbit has urged Britain to aim for technological independence from the US, at the expense of the Americans.

Tebbit urged Congress to help reduce tension between the two countries by approving amendments which would curtail their extra-territorial claims in the new Export Administration Bill.

A joint House-Senate bill is to be drafted by a committee mediating between the hawks and doves in the US Congress.

Tebbit stressed that Britain had not gone soft on preventing the flow of high technology to the Eastern Bloc. But he said that there were suspicions that US policy favoured the commercial advantage of US companies rather than the shared strategic objectives of the allies.

The implication seems to be that if agreement is not reached over

exports, Britain should forge closer links with either Europe or Japan, at the expense of the Americans.

Tebbit was addressing the North American section of the London Chamber of Commerce last week.

The US practice of extra-territoriality — imposing its own export regulations overseas — had strengthened the argument for a British capability under British control in strategic fields, said Tebbit. He added: "As a second best, Britain should turn to another country with indigenous technology and without pretensions to extra-territorial jurisdiction."

Tebbit stressed that Britain had not gone soft on preventing the flow of high technology to the Eastern Bloc. But he said that there were suspicions that US policy favoured the commercial advantage of US companies rather than the shared strategic objectives of the allies.

Tebbit returns to the US in May with a visit to the West Coast. He will promote export opportunities for UK firms and investment in British industry and is expected to make a trip to Silicon Valley.

Stockbroker Greene tips four for the top

by George Black

LOGICA, Rolfe and Nolan, Technology for Business and Miles 33

are the four hot tips for investors from stockbroker Greene & Co.

Its 1983 survey of prospects in the computing services sector published recently picks these four systems houses as chief recommendations for British investors out of 50 organisations investigated.

On Logica, Greene writes: "The high rating is not out of line with that accorded to other specialist software houses. They should not be omitted from any high technology portfolio at current prices."

It adds that the main growth will be in products, not in its traditional areas of consultancy and turnkey projects.

Recommending City-based Rolfe and Nolan is long overdue, says Greene. Profits have been held back by substantial expenditure on software development, but this has been fully incurred and written off. From May it will be selling turnkey systems in this country and abroad.

Technology for Business has been overshadowed by trading as a subsidiary of the French firm Lo-

gabax. But the brokers feel it is now on a sound financial footing and its dividend yield is one of the highest to be found in the sector.

The company is market leader for solicitors' systems and has enormous growth potential, according to the report.

Miles 33 established itself as field leader in computerised typesetting and the brokers say that it is 18 months to two years ahead of its rivals. The costs of developing the system have been written off, and there has been intense marketing over the past year, particularly in Europe. Marketing will begin in the coming year in the US, the biggest market by far.

Of the 50 firms reviewed, 44 showed positive growth and 20 improved over 25% in the year.

A report by Inter Company Comparisons of London lists the fastest-growing UK computer services firms as consultancy Mancos Holdings, Rolfe and Nolan and peripherals vendor Zyglo Dynamics.

Datastream is the most profitable employee, followed by Rolfe and Nolan. Highest paid staff on most recent data are at Rand Information Services (average £16,325) and BIS (£15,067).

Storage ships in IBM rival

by Keith Holder

STORAGE Technology, the biggest supplier of plug-compatible disk systems in the world, has shipped its first IBM 3380 contender, the 8380, to the UK.

This marks the beginning of a concerted effort by the company to break into the European market for 3380 disc systems, which helped push IBM's peripheral sales to a record figure last year.

Geoff Benjamin, acting managing director of Storage Technology, says: "There is a market in Europe for about 20,000 3380-type disc systems this year, and we are determined to get our fair share."

The race is now on among the plug-compatible manufacturers to grab the biggest slice of this market, with National Advanced Systems (NAS) and Storage Technology both claiming to be ahead at the moment.

MPs doubt Registrar's status

by our Parliamentary Correspondent

AMENDMENTS designed to ensure that the Data Protection Registrar will be independent of the government were水印 during the Data Protection Bill's committee stage by SDP MP Robert Maclellan.

Maclellan is worried about the power in Schedule 2 of the Bill for the Home Secretary to control the size of the Registrar's budget and staff, set out in Section 2 of the Bill.

David Waddington, minister of state at the Home Office, defended the government's control over the Registrar's manpower and expenses. The Bill already did much to guarantee the Registrar's independence, said Waddington, but it would be irresponsible to give the

person too free a rein over public funds.

However, Labour MPs said they were unhappy that the Registrar did not have more powers to investigate complaints by people who suspected that data files concerning themselves were being misused. The MP's wanted the Registrar to take the initiative in investigations.

The Data Protection Bill was also indirectly connected with a question in the Commons put by Michael Meacher, Labour front bench spokesman.

He wanted to know for what purpose a Ministry of Defence installation in Mayfair had been connected to a national network of computers and terminals.

Some of the details of this MIS computer had been revealed by the

New Scientist recently.

Leon Brittan, the Home Secretary, replied that it had been the practice of successive governments not to comment on the use of computers for national security.

Chairman of the British Micro Manufacturers Group, David Broad, agrees, but says although the attrition rate for micro companies will be high, there will be new firms setting up almost at the same rate.

He adds: "The figures given are open to interpretation. We might see the micros of today disappear only because they are replaced with new models."

He points to his own company, Comart, as an example. It now has sales for its most recent 16-bit system exceeding those of its original eight-bit machine, though Broad adds that the older machine has a future.

The report goes on to say that the smaller manufacturers and distributors will be forced to look for specialisations not catered for by large volume manufacturers, like IBM, in order to secure themselves a future.

Broad describes this attitude as "over-simplistic", pointing out that the small business market alone will supply sufficient scope for low volume manufacturers of micros.

He adds: "I don't expect to see any fewer manufacturers in the future than we have now, though they may not be the same companies we see now."

He predicts that the main criteria for sorting out the winners from the losers will be what operating systems are used by a particular machine, and that only 10 or 12 manufacturers will be left by 1988.

Tetra sales soar

HIGH WYCOMBE distributor Tetra sold £3.25 million worth of Fortune systems and software during 1983, netting £250,000 profit.

Tetra, one of two UK distributors of Fortune equipment, also sells Unix-based Tetraplan financial applications to run on the high-powered US micros. Director Gordon Skinner claims it has been an outstandingly successful year.

Second for Intel

THE acute shortage of microprocessor chips has spurred Intel into a second source agreement for its 80186 with Advanced Micro Devices.

Manufacturing data has been transferred; Advanced Micro Devices expects to start production at the end of the year. Demand for the chip, says Intel, will be 10 times that for any previous Intel processor. It can be used to build computers compatible with the IBM-PC.

Survey sees tougher times ahead for many micro firms

by Keith Holder

THE microcomputer market is becoming a tough place to survive — and will get tougher, according to a market research report by Technology Intelligence.

It predicts that, as competition heats up, 40% of current suppliers will go bust in the period 1984-88 and one in three micro companies will not survive two years.

It estimates that the UK market for micros will grow by an average 4% a year, and the market will move from being hardware driven to software driven.

These figures are close to an earlier estimate by the Economist Intelligence Unit, which predicted a 5.2% growth rate and a market value of \$2.3 billion by 1987.

The report also says that 70% of today's machines will not be in production by 1986.

National Computing Centre (NCC) spokesman Bill McCool says that he thinks the Technology Intelligence report is close to the mark.

Broad describes this attitude as "over-simplistic", pointing out that the small business market alone will supply sufficient scope for low volume manufacturers of micros.

He adds: "I don't expect to see any fewer manufacturers in the future than we have now, though they may not be the same companies we see now."

He predicts that the main criteria for sorting out the winners from the losers will be what operating systems are used by a particular machine, and that only 10 or 12 manufacturers will be left by 1988.

US service giant turns to products

by John Kavanagh

A MAJOR reshuffle at the top of US services giant University Computing Company and a \$44 million cash injection has confirmed that the \$153 million company is moving into applications software products in a big way.

Its new applications products division has been given equal status to the mainstay systems software division. And president Allen Huff has resigned after 15 years with the company — nine months after takeover specialist Gregory Liemant joined as chairman.

Meanwhile in Europe the company is considering further takeovers in the microcomputer applications field.

It moved into applications products in the autumn with \$21 million double takeover. First it went for Open Systems, a US firm with accounting packages for eight-bit and 16-bit microcomputers. Then it bought banking software firm Financial Software of America.

These moves followed the arrival of Liemant from services firm Geico — which took over several software companies in the early 1980s. He organised a \$25 million share issue specifically to fund takeovers. Since the first two deals the main shareholder has put up another \$24 million and provided a

further \$20 million research and development loan.

"We're now evaluating the European opportunities for the micro products," says Mike Cocks, head of Software Products International.

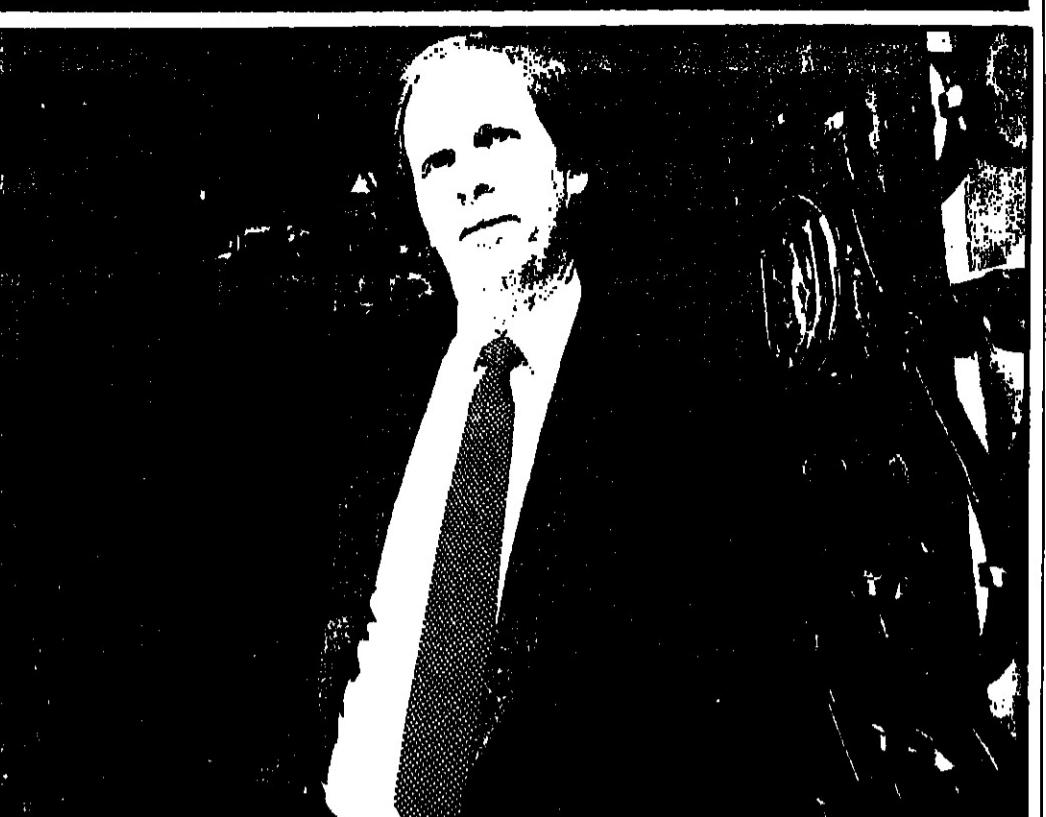

"It could well involve acquisitions of applications companies — and the UK would be the spearhead as it's the fastest-growing market."

"If we go ahead we will expect micro products to make a big contribution, so we'll certainly do it in a big way."

Cocks says that since Open Systems was bought, its annual revenues have grown from \$6 million in 1983 to a projected \$16 million this year.

Huff, who was made president a year ago, left amicably, Cocks says. "Greg Liemant is a very dynamic individual with a very strong personality and his own way of doing things," he says.

After a poor end to 1982 and start to 1983 University Computing has reported a profit of \$190,000 for the year. It was hit by the generally poor state of the bureau business and by the write-off of its unprofitable hardware OEM side. Fourth quarter profits of \$1.2 million show the company recovered in the second half of the year.

O'BRIEN... "It is hard to persuade good software people to go into maintenance."

Thorn-EMI forms new arm

by Philip Hunter

ELECTRONICS giant Thorn-EMI last week moved into computer maintenance by setting up a 90-strong firm aimed particularly at the business micro market.

The new company, Thorn-EMI Computeraid Services, will provide third party maintenance of installed micro and minicomputer systems and peripherals, and will also offer a quality control service to manufacturers and importers.

The company has set up in Farnborough, and is headed by Maurice O'Brien, previously general manager of the firm's Software Sciences Hardware Maintenance division. Predicted first year turnover is £2.2 million.

O'Brien says that the micro maintenance and service market is potentially vast, and is ready to be opened up by the right sort of marketing.

But one problem facing the new company, says O'Brien, is the difficulty in hiring good software maintenance staff. "It is hard to persuade good software people to go into maintenance," he says.

Computeraid Services has opened engineering workshops in 10 UK cities as a base for a return to depot service to users, and its "Total Care" service for importers, OEMs and manufacturers.

Computeraid Services is a subsidiary of Thorn-EMI's Information Technology division, which expects to report turnover of £200 million for its year ending this month.

The group moved deeper into the software market by setting up Thorn-EMI Software with 70 people in October 1983 to market financial and systems software.

The company also owns Software Sciences, which is involved in the UK Ada project.

Trans-Basic prize goes to Wiltshire

A SMALL Wiltshire software company has carried away the first prize in a competition for those who think they can program efficiently in a multi-user environment.

The winner, Panoramic Computing of Chippenham, is an one-year old start-up company. David Warren, managing director of Panoramic, used the application generator from the FMS80 relational database management system to write his entry. FMS80 was developed by David Rodman.

Computer Automation put up the money for the competition, which challenged programmers and systems analysts to beat a simple transaction programming exercise running in a multi-user environment. The Computer Automation example was based on its own Trans-Basic language.

There were 150 entries in the contest, but Panoramic's entry was a clear winner. Warren said that winning the competition was a "wonderful vote of confidence for us and FMS80. Every software house and independent programmer reckons they have the best program, and this was their chance to prove it."

Peter Yellow (centre) of Computer Automation presents the cheque to Warren.

Panoramic received £1,000 for winning the competition, and an additional £500 for beating Computer Automation's own score. Computer Weekly, which backed the competition, will present £500 to the Royal Marsden Hospital, Sutton, as part of the contest.

Micro makers resist efforts to curb adverts

by Keith Holder

EXTRAVAGANT advertising claims made by computer companies should be curbed, and a new watchdog body set up to see that this happens, according to Peter Sinclair, managing director of Sinclair Consultants.

But the computer industry, including micro makers such as the unrelated Sinclair Research, has been quick to pour cold water on the idea.

"The small business systems industry is too often characterised by overselling and under performing," says consultant Peter Sinclair.

He suggests that instead of the present Advertising Standards Authority (ASA), there should be an independent body, under the guidance of the National Computing Centre (NCC), to keep a closer eye on the claims made by manufacturers for their products.

The NCC, however, does not agree. Director David Fairbairn says: "We don't see that a watchdog committee is necessary. The advertising authority, in matters of high technology advertising, should take advice from informed sources."

The ASA says that it does take advice on these matters, though a spokesman declined to name the sources it uses.

"Computer manufacturers are not our number one area of complaints anyway," he comments, "and we are satisfied that we are covering the area adequately."

Sinclair also points to the small "home" computer manufacturers as the most frequent transgressors of the advertising laws, describing their advertising as "too often redundant with absurd hyperbole and unjustifiable superlatives".

Manufacturers do not agree, and think that Sinclair is being unfair.

A spokesman for Acorn Computers, which makes the BBC Micro,

says that any complaint brought by the ASA has been taken very seriously, and remedied immediately.

These companies are adamant that they do not attempt to mislead.

Brian Wilton, who handles Acorn's advertising campaigns and says: "Companies in the home computer market are selling a product that is way ahead of the customers who are buying these machines. Some translation is necessary and there are a few slips made between the brain and the mouth."

Users turn to touch screens

by John Riley

THERE is an "explosive" growth in the demand for touch sensitive terminals, says the boss of Mellardata, the UK manufacturer of off-the-shelf touch systems.

Geoffrey Mellor, managing director, says that the UK is now catching up with the US in user awareness of touch sensitive screens and that his sales of touch sensitive terminals have increased 20 times over the past year, particularly in the past few months.

Colchester-based Mellardata, which distributes terminals and

printers, designs and manufactures touch systems for terminals and is shortly to announce a touch system for several makes of terminal, including US manufacturer Television's Personal Terminal.

The main demand is from process control organisations," explains Mellor, "such as large chemical companies, power station control and military command and control systems. Other interesting growth areas are public access systems, information retrieval systems and training."

Mellor says that several large

orders are in the pipeline from training colleges. "Students can interact with a touch terminal more easily than by using a key-board."

Touch terminals are also good for multiple simulation systems, for example, control panel training, where the user can put up different simulated control panels on the screen at the flick of a switch.

"We've been preaching the touch screen gospel for some time now," says Mellor, "and now we feel that it is bearing fruit."

SALES BRIEF

Ferranti's CAM-X rakes it in

FERRANTI is at last making a return on its investment in computer-aided design and manufacturing systems, with orders for its CAM-X system now running at £1 million a month. The company's CAD/CAM arm, Ferranti Cete Graphics, took five orders in December 1983, including an export order from German engineering group Krauss Maffei for £200,000, and two orders totalling £450,000 from Vickers Defence Systems. The company is expected to announce a multi-million pound CAD/CAM order this week.

DPCE hardware

A HARDWARE maintenance contract worth £250,000 has gone to independent computer maintenance firm DPCE UK. The firm will be responsible for the maintenance of an ICL 2960 mainframe and associated peripherals over the next three years at the Cheltenham premises of Dowty Group Services.

Box office winner

LONDON-based Space Time Systems has won one of the largest contracts for computerised box office systems. The company is to install its Box Office Computer System (Bocs) at all theatre and exhibition venues owned by the City of Birmingham, including the National Exhibition Centre, in a £500,000 contract.

Cray goes to Italy

US supercomputer-maker Cray Research has announced its first order from Italy, and its fourth so far this year. Cineteca, a consortium of 13 Italian universities, has ordered Cray-1 M/2200 worth \$6.4 million, to be installed at its data processing centre in Bologna for scientific research.

Stroud changes

STROUD Building Society is changing its equipment from bureau service, run by National Westminster Bank subsidiary Centrefile, to its own in-house system based on an NCR 9200 computer. The Society has ordered a new version of NCR's Building Societies System developed by Quadra Computer Services.

ICL motor deal

ICL is to supply British Telecom's motor transport division with a nationwide processing network costing £2 million. The network, to be developed in the next six months, will include a System 25 mini at each of 10 regional transport offices, and a further 45 System 25s for the largest service centres.

Shipping contract

THORN-EMI subsidiary Software Sciences has taken a £100,000 order for its multi-user Wicat computer as part of an information system containing details of ships, cargo, movements and crew, and suppliers. The system installed will be the Wicat 220, designed by Seaside Data Systems.

Senate stamp

THE Post Office has gone to Senate Computer Services, a subsidiary of the London-based Gordon & Gotech Computer Group, for a £370,000 order entry, processing and accounting system to manage its Philatelic Bureau's worldwide sales to stamp collectors. The system will run on the bureau's new Burroughs 8690 mainframe.

Nixdorf order

NIXDORF Computer, West Germany's biggest indigenous computer maker, which recently went public to raise money for an assault on its domestic micro market, has taken an order from Banque Belgo-Zairaise for an 8870 mainframe.

"We've been preaching the touch screen gospel for some time now," says Mellor, "and now we feel that it is bearing fruit."

Philips thinks the IBM office way

by Donald Keenett
DUTCH electronics giant Philips last week unveiled its strategy for office automation. Sophomation (Synergistic Open Philips Office Automation), and revealed that it has gone firmly as independent systems.

Philips will manufacture the workstation and will carry out its own further development. The company will aim its initial sales at its traditional banking market and intends to move on from there to tackle other financial markets such as insurance.

"It is an important part of our office automation strategy to make it easier for the customer to adapt to the Sophomation system," Bindels says.

Key elements of the Sophomation scheme are the document handling devices, the networking systems, the software applications and tools. Memphis software generator is claimed to increase programmer productivity by 50% to 160%.

■ Philips last week announced a 49% increase in net profits for the year, to 647 million guilders (£147 million), on sales that had increased by 7% to 46.2 billion guilders (£10.5 billion).

BINDELS... "We don't expect mass production before 1990."

Half of VDU women had abnormal pregnancies

by John Riley

A STUDY of VDUs by the US National Association of Working Women reveals that over half of the 873 respondents suffer from eyestrain, exhaustion and muscle pain. The study also claims that over half of the 48 women using VDUs in a San Francisco airline reservation office who had become pregnant since 1979 had abnormal confinements.

The association, called 9 to 5, produced a report which has received wide coverage in the US computer press. The newspaper Computerworld says the sample of 48 pregnancies in San Francisco is small and that the defects could be due to other factors, including nearby radioactive wastes.

In the UK, eyestrain and aches and pains are usually due to poor attention to ergonomic factors in the office and to minor correctable defects in vision, not noticed in a non-VDU environment, rather than to emissions from the machines themselves.

Idem Carbonless Paper. Clearly the best.

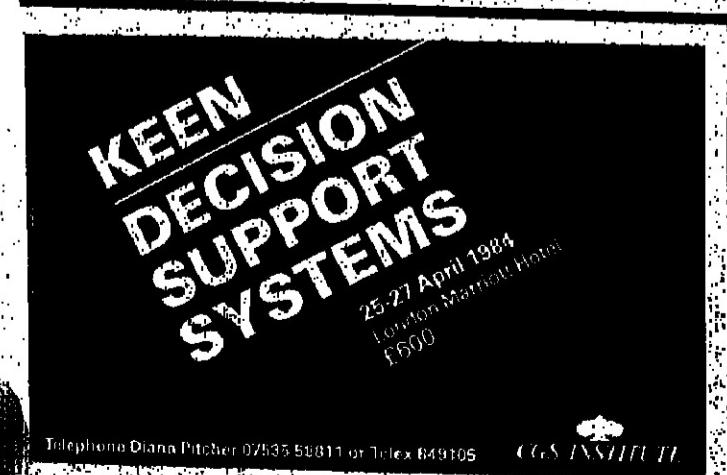

An IDEM copy is Accuracy's ally. None of those smudges and smears which are the equivalent, in terms of distributing information, of talking with your mouth closed. Simply use Idem with Idem in manual typewritten or computer-produced forms — ply after ply, with nothing else added — and you'll see clearly why Idem is Britain's No. 1 carbonless paper, with the widest available range.

IDEML is a trade mark of Wiggins Teape (UK) plc.

Prime buries axe and takes on staff

by Andrew Thomas and Claire Gooding

PRIME is recruiting CAD/CAM specialists at its Stevenage plant – almost a year to the day after 38 staff were axed there. Prime took over the Compedit CAD software house late in 1982 after a long period of uncertainty during which a further 20 employees quit.

A deal with Computervision, the world's largest CAD company, has given Prime a version of the Medusa solid-modelling package for an undisclosed sum.

Until now the rights to Medusa have been split between Computervision subsidiary Cambridge Interactive Systems in Europe, with Prime selling in the US and the remainder of the world.

Now both companies share the worldwide rights, giving Prime the right to enter Europe, where Computervision has already sold more than 300 systems.

After June 1, Medusa is likely to

develop along two separate paths as Prime and Cambridge, the product's developer, add enhancements. Prime plans to integrate Medusa into its own complete CAD/CAM system, and is now looking for up to 14 people "very urgently," says a company spokesman.

The 14 will fill vacancies left at Stevenage by last year's redundancies and resignations.

Medusa runs mainly on Prime kit, but according to Cambridge chairman John Chilvers, a DEC Vax version has been around for three years and until now has been kept under wraps on his orders.

"We weren't hiding it; we just weren't pushing it at all," says Chilvers. "But now we've got worldwide rights, there will be a change of emphasis."

The version of the package bought by Prime, version 4.6, is the current issue, but the US mini-maker will not get any of the

enhancements Cambridge plans for the next six months.

"From now on, Prime will not get any new modules or enhancements; it will have to provide its own," confirms Tom Sancha, managing director. "At present we're not worried about having to compete with Prime in Europe, especially as we are free to sell worldwide. We're now back in full control of our own product, which puts us in a very strong position."

Prime, thought to be behind target with its Medusa sales so far, seems to have paid dearly for a product which Sancha implies will soon be outdated.

But apart from gaining its European foothold Prime will now be released from the vulnerable position of having its premier CAD/CAM system supplied by a competitor. It will now be free to build the product into its own long-term plans to create an integrated CAD/CAM environment.

CHILVERS... "We weren't hiding it, we just weren't pushing it."

Go-ahead for Alvey executive workstation

TWO parallel schemes to build high-performance executive workstations have been put in motion by the Alvey directorate.

Both involve GEC, ICL and Ferranti and the longer-term scheme will also incorporate Thorn-EMI, Plessey and STC.

The first has been given the go-ahead for a £60,000 pilot study into a new machine that could be launched in 18 months to two years.

The longer-term idea is to develop a common architecture for all UK manufacturers of computers and their components. This is likely to take at least three years to accomplish and will probably involve many more firms than the present consortium of six.

Alvey director David Thomas, who is responsible for the intelligent knowledge-based systems aspect of the five-year programme, is about to announce another major plan involving a consortium of big firms in image processing. And another initiative in VLSI is close to launch.

UK firm goes on US takeover trail

by John Kavanagh
UK SYSTEMS house Systems Designers International is on the acquisition path in the US to expand its fledgling business there and to back its planned move into the software products market.

This emerged last week when the company announced annual results, which showed it had maintained its 45% profit growth for the fifth year running. Profit before tax was up 46% to £1.55 million. Turnover rose 47% to £13.95 million.

The share price has risen to almost £6 from £2.10 when the company joined the Stock Exchange at the end of 1982.

"Over the next three to five years we'll be looking for more profits from products," says chairman, Philip Swinstead, who formed the company in 1969.

"The US is the biggest products market, so it's most important for us to get in there. We're looking very seriously at acquisition pros-

"We will still supply big

systems, but some of the components could be packages," he says.

Other products include the Ada programming language, which is being launched in Europe, and the Poplog expert systems language. In 1983 products accounted for just over £1 million of the total £13.95 million.

During 1983 Systems Designers increased its professional staff by over 40% to 425. There are also 100 sales and administration people.

Sales outside the UK totalled £2.9 million, compared with £2.1 million in 1983. Significant overseas business included a £1.5 million software contract from Olivetti to develop a public viewdata system for the South African Post Office.

In the UK the Perspective project control product became the first software system to win the British Computer Society's technical award.

SWINSTEAD... "We'll be looking for more profits from products."

Rapid Recall

An Invitation to drop in on Dec Village

Kensington Town Hall
Exhibition Centre Hornton St W8
March 29th & 30th

Dec Village – it's where the action is on the Digital front. If you're an end-user, an OEM, or a dealer there's something here for you. For the first time ever Rapid Recall and Digital are bringing into focus all Digital's low-end products. You'll find under one roof seminars, products, technical support teams, new Digital software – and all the key people in the Digital World.

There's exciting new Digital products like Microvax, Micro PDP 11, the VT 200, IVIS, DecTalk. And a full range of technical seminars each

day where the experts can answer all your questions.

So put it in your diary now – and come along to the big Spring get together of Dec people and products.

Mercury denies rigged Whitehall comms deal

by Nuala Moran

MERCURY Communications, the private telecommunications company, has strongly denied allegations that the government planned to provide it with guaranteed contracts for re-equipping Whitehall's communications network.

The charge was made last week by Colin Talbot of the telecoms engineers' union, the PORU.

Speaking at a conference on privatising BT said the government was digging tendering for its own networks in order to boost Mercury.

But Mercury says this is untrue. "The guy who made the statement was playing at politics," according to Sandy Skinner, Mercury marketing communications manager.

If any public authority goes out to tender as of now we expect to be asked to tender. We would be very cross if anything went to BT on a single tender basis, but we do not expect to be offered business on a plate,"

A PORU spokeswoman says: "We have suspected all along that

this might happen and that the government would make sure Mercury got some contracts. Talbot appeared very satisfied with his sources when he made the speech and the PORU is now trying to find out exactly what the position is.

And Mercury need not necessarily be in a position to know if it was being favoured."

Meanwhile cable laying for Mercury's figure of eight optical fibre network is "going like a bomb," says Skinner. The cable is being laid in troughs along railway lines.

The threat of work on the network being blacked by the National Union of Railways came to nothing earlier this month when its executive sent a memo to members saying it had decided to co-operate on the network.

Mercury has established one communications link – a microwave link between London and Birmingham.

Skinner says he expects the first customers to start using the service "very shortly".

Ericsson takes bigger share of phone market

by Donald Kennett

ERICSSON, the Swedish telecommunications and electronics group, increased both sales and profit by 30% last year, despite heavy investment and losses in the US.

Sales totalled 25.24 billion Swedish krona (\$3.3 billion) and profits before tax and appropriations Skr 1.76 billion (\$232 million).

Investment in the US went on the development of new products and on the expansion of its distribution network, but Honeywell shared the development costs following the co-operation agreement between the two companies.

Losses in the US were largely in the cable division, but were reduced by 40% on the previous year.

The company's share of the public telephone exchange market continued to rise because of the success of its AXE digital system, which had been ordered by 49 countries by the end of the year.

Sales of its cellular mobile radiotelephone equipment tripled during the year, and it won important contracts in the UK and the US.

The number of staff employed

rose from 66,300 to 70,783.

Ericsson Information Systems, the office systems part of the Ericsson group, plans to add 100 new staff to its UK complement of 230 this year.

UK managing director John Bunce says the company has grown at an average of 51% a year since it was set up in 1981, and more staff are needed for sales and customer support to sustain and improve on this rate of growth.

Last year's sales reached £17.4 million and the main growth areas were electronic typewriters and Apple II computer workstations. But the new company introduced several new products to the UK last year, including the Ericsson 10 teletext terminal, the StepOne microcomputer and the 4544 high-resolution colour graphics printer.

This year it plans to launch its Brixpress access control system, a range of modems and a range of word processing attachments for electronic typewriters.

Bunce adds that a major factor in his company's progress is the merger with Facit, whose office furniture has enabled the company to supply "absolutely everything for office, warehouse and factory management systems."

One separated, the micro uses a large internal temporary memory to store programs such as word processing, spreadsheet and financial

French switch funds

by Jack Gee

FRANCE'S socialist government has opted to channel funds into the computer and electronic industries instead of into doomed state-controlled sectors such as steel and coal, which are to be treated less generously.

Computer maker Bull and electronics giant Thomson will each receive one billion francs (£80 million) this year as part of the effort to achieve the ambitious targets of France's five-year electronics plan. The plan, which runs until 1986, seeks to make France independent of foreign sources for computers and semiconductors by the end of the current decade.

Thomson's finances are in a parlous state, although it has handed over its computer activities to Bull and its loss-making telecommunications division to the joint venture with CIT-Alcatel.

French President François Mitterrand will be keeping a particularly watchful eye on the performance of the nationalised companies.

The companies' chairmen, appointed two years ago after the companies were nationalised, are to be judged at the beginning of 1985.

Those who have shown signs of turning round failing groups – such as Bull's Jacques Stern – can be confident of holding on to their jobs. Others, like Thomson's Alain Gomez, who still have a lot of ground to make up, might be discarded.

The French computer industry will also benefit from FFr700 million (£56 million) which are being channelled this year into Thomson Telecommunications. This is a state-managed company which was set up at the end of last year to pool the efforts of Thomson and CIT-Alcatel in developing digital telephone switching systems.

On top of the financial aid which Bull's chairman, Jacques Stern, will get under this issue of cash, will be a sum for research and development.

The French computer industry is to be judged at the beginning of 1985.

Those who have shown signs of turning round failing groups – such as Bull's Jacques Stern – can be confident of holding on to their jobs. Others, like Thomson's Alain Gomez, who still have a lot of ground to make up, might be discarded.

California-based Kaypro, a micro dealer that already markets a range of business machines, is on the point of finalising a deal with the Japanese trading group, Mitsui, to distribute the machine.

Details of the machine are still shrouded in secrecy, but industry sources say that the computer can closely imitate the IBM PC when plugged into its base station, which contains a screen and floppy disk drives.

The machine was developed by Mitsui in the US, and Kazuhiko Nishi, from Microsoft.

A spokesman for Kaypro says that the preliminary agreement with Mitsui will be made permanent next month, and will result in Kaypro having an exclusive licence to sell the machine.

No price has been agreed yet.

Just as we have the edge over our competitors – you can have the edge over yours.

Because from now on Cullinet's unique integrated software system IDMS/R makes the full promise of computers come true.

IDMS/R, with its automatic system facility (ASF), makes your IBM mainframe as easy to use as a personal computer.

With ASF you can develop an application in seconds by simply defining a relational record.

ASF then dynamically generates all necessary supporting structures

including data definitions, screen formats,

application processing logic, and documentation.

This makes ASF a major advance over 4th generation languages.

However, you need outstanding performance to build a complex, high volume production application.

Typically 5% of the data relationships (joins) in any applications

are accessed 95% of the time. With IDMS/R you simply change these relationships to predefined joins and benefit from a dramatic boost in performance.

We call it Relational Fastpath. This is what makes IDMS/R a unique relational DBMS, and a perfect system for your production applications.

IDMS/R has the most sophisticated back-up and recovery capability of any DBMS, a full integration with personal computers and a complete line of integrated financial and manufacturing applications.

But then Cullinet has always had the edge.

We introduced the 1st dictionary driven DBMS. And we've kept ahead with continuous research and investment producing sophisticated tools based on proven techniques. Call us and we'll prove it.

At Cullinet we believe there's no such thing as second best.

Sinclair seals Korean deal

by Nuala Moran
SINCLAIR Research is expanding its markets in the Far East by way of a deal with Samsung Electronics of South Korea. The deal licenses Samsung for local assembly and distribution.

The deal covers the ZX81 and Spectrum. Sinclair will ship out the components and it is expected that the first machines will be on sale in South Korea later this year.

A Sinclair spokesman says: "There is no published or quotable figure on what this deal is worth, but we are confident that there is significant potential, and obviously Samsung is too. Samsung is an enormous company with a great deal of strength, so it has all its distribution worked out."

"This sort of local assembly deal is the only way to get into this market," he adds. "This is because of high import duties on finished goods."

There are no plans on the software front. "Software was not a subject addressed in any detail in this deal," says the spokesman.

He confirms that there is no possibility of Samsung assembling and selling the Quantum Leap (QL).

The deal involves only the South Korean market, and there are no plans for Samsung to sell anywhere else. The deal will not affect Sinclair's Chinese venture, which in any case is hardly off the ground.

The company made an agreement last September with the

CHUNG . . . Signs with Sinclair.

NEC attacks OEM disc market

by Keith Holder
FLOPPY and Winchester discs from Japanese manufacturer NEC will hit the OEM market this month.

Mike Jeffrey, disc product manager for NEC's European business systems division, says that the move is designed to secure a large slice of the non-captive OEM demand for disc products. He estimates that the growth in demand for 5½ inch Winchester discs alone is around 60% per year.

NEC's initial introductions will be 5½ inch and eight inch Winchester, plus eight inch floppy discs with maximum capacities of 20, 167 and 1.6 Mbytes.

A European distribution network is being set up and Thame Systems has already signed up to supply eight inch Winchesters.

From April, samples of a slim-line 5½ inch floppy disc and a nine inch, 520 Mbyte Winchester disc will be available.

Jeffrey says that two of the discs fit into a standard 19-inch rack, offering a compact unit with over one gigabyte of storage. Later in December the company plans to introduce a 3½ inch floppy disc.

Jeffrey says that the discs will be marketed in earnest from April, but adds: "We are not going to flood the European market."

He says that he expects a slow growth initially, but hopes to build up support with a solid user base.

There are no plans to introduce the company's optical disc system before the end of this year, he adds, and it is unlikely that NEC will set up any manufacturing facilities in Europe for the time being.

DUGGAN . . . "Purely commercial decision."

Receiver tries to save Altergo

by George Black

ALTERGO Ireland has been put into the hands of the receivers, who face the difficult task of reviving its major contract with the United Arab Shipping Company.

Cord Investment, which held 60% of shares in the company, has appointed William Horgan of accountancy firm Arthur Andersen as receiver to sort out its financial affairs. Cord managing director Niall Duggan says that it has lost over £100,000 and has decided not to invest any more in Altergo.

Less than a year ago Cord took a 60% stake in the Dublin subsidiary of Altergo when the parent company went into liquidation. Since then, it has increased its share to 80%, the rest of the stock remaining with other former Altergo shareholders.

Horgan says it is too early to say what can be rescued from the situation as his staff is still gathering information. He hopes to have

assessed the picture by the end of this week.

United Arab Shipping Company will not comment on the collapse of its £1.4 million contract to supply a new system, saying the matter was in the hands of lawyers.

It is extremely doubtful whether the job can be finished now that the 65 Dublin staff involved have been laid off.

Duggan claims that the original contract with the Shipping Company had been re-negotiated when Cord took over Altergo Ireland and the completion date of summer 1984 had been taken out.

He says this means that the Shipping Company cannot claim damages. He adds that it is obliged by the contract to supply staff for testing the new system at certain times, which he alleges has not happened.

Because the testing has not been done, the Shipping Company has fallen behind with its monthly payments to Cord, Duggan says it has been unable to complete the work unless it raised more capital.

"It didn't even try to do this, it was a purely commercial decision," he says. But he believes that if the money had been there the system could have been finished in August.

One ex-employee, however, who would not be named, says:

"When the redundancies were announced there was nearly a riot because people felt the operation had been so badly mismanaged. It had some problems before the takeover, but it has been 10 times worse since."

Duggan met the Kuwaiti managers in November to alter the timetable, but it slipped again.

Altergo's other big scheme, for Saudi airline, is going smoothly and will be finished by June, according to Duggan. But the 20 people on the project will need to be re-allocated somewhere.

Explaining his recommendations, Maddock told the inquiry that he had begun from the

standpoint of making more attractive both in terms of student grants and in support for equipment and postgraduate studies at these centres. They should be allocated a higher proportion of visiting professors, lecturers and other facilities from the best reaches of industry.

Strong emphasis should be put on marketing and international trade methods, opportunities and constraints.

The level of funding provided by the Department of Education and Science should not only be reduced correspondingly, but by an even greater proportion. In its place should be direct funding by industry at both secondary and tertiary level.

Civil industry has much to learn from the armed forces in this respect, he goes on.

Maddock hopes that with the authority of the House of Lords a dramatic attack could be made on this vital question.

The inquiry had already heard

from senior officials of the Departments of Education and Science, and Trade and Industry. It will also take evidence from the Manpower Services Commission and the Science and Engineering Research Council, among others. It is expected to publish its findings by August.

Dr Swann voiced his concern about what Maddock was proposing.

"There is enormous inertia in university research and still more in university teaching," claimed Swann.

"The university system has

given rise to a whole range of middle-class closed shops. We may be in danger of setting up a new establishment here. Shouldn't the initiative come from those firms that need the people?"

He suggested that firms should

NEWS ANALYSIS

Recruitment and training are vital issues that refuse to be solved easily. George Black reports on a House of Lords inquiry into recruitment and Philip Hunter examines the limited success of a government training scheme

Fight the modern fight, DoTI told

The House of Lords Select Committee on Science and Technology is inquiring into recruitment problems through a series of public hearings. Last week it interrogated Sir Ieuan Maddock and the past principal of Manchester Polytechnic Sir Alex Smith. At a previous meeting it took evidence from Alvey Programme director Brian Oakley. George Black reports.

Industry should be encouraged to recruit even into providing money through powerful tax incentives. Where public money is used, it should be committed to educating the high quality staff industry needs.

It is ridiculous, according to

Maddock, to witness giants of the electronics industry whose business is largely with government, bemoaning the fact that they are starved of technical personnel.

The number of higher education establishments should be nominated as national institutes of industrial technology and be funded through the Department of Trade and Industry instead of the Department of Education.

This is the main recommendation of a written paper presented to the Lords inquiry into new technologies by Sir Ieuan Maddock. Maddock, former government chief scientist, is now deputy chairman international, of the US General Electric.

Japan, Taiwan and South Korea have all set themselves the same goal. Britain should now mobilise its labour force for the coming war for electronics markets, as it did in 1939 for the Second World War.

One third of Taiwanese schoolchildren, a terrifying figure, are now coming out qualified in electronics, he said.

"We are fighting a dire economic war, but I think we can do it"

training. Civil industry has much to learn from the armed forces in this respect, he goes on.

He blamed the present shortage of staff for high technology on the flow of the brightest young people into social science, which he admitted is cynical about it. It was fundamentally a social problem that not enough bright people had been attracted into engineering.

For some reason, it was regarded as a specialism, whereas to study Pekinese was regarded as a general education.

Dr Swann measures were now needed to correct this. A series of secretaries of state had tried and failed.

"I'm not suggesting to the government that we should spend more money, only that we should

spend it better. We should shift it away from the elitism of science towards industrial technology."

It needs the University Grants Committee list of priorities to be turned upside down, he said. There would be much opposition, but this must be overcome.

Committee member Lord Swann voiced his concern about what Maddock was proposing.

"There is enormous inertia in university research and still more in university teaching," claimed Swann.

"The university system has given rise to a whole range of middle-class closed shops. We may be in danger of setting up a new establishment here. Shouldn't the initiative come from those firms that need the people?"

He suggested that firms should

MADDOD . . . "Ridiculous to witness giants bemoaning the shortage of technical personnel."

taught as a subject in schools. It was just as important in people's lives as literature or music. But he had failed to win CBI support for this view.

Swann said the most important thing of all was to get schools to understand why manufacturing industry mattered.

Lord Greggan, chairing the meeting, asked Sir Alex whether it was possible to make the great leap forward without adopting an elitist approach.

Sir Alex replied that it was no good having a splendid elite without support from underneath. West Germany had two-thirds of its non-graduate population with qualifications, while the UK had only one third. And Japan is training 11 times as many engineers as Britain.

The problem was that, although money was going into research and development, the matter of staffing had been left entirely to evolution.

Sir Alex Smith, past principal of Manchester Polytechnic and past chairman of the Schools Council argued that industry ought to be

more ready to take people from other disciplines and re-train them, as biologists had been re-trained for radar work during the war.

Maddock agreed there had been a great outpouring of talent in the early part of the war, unlocked by the emergency. People were far more multi-disciplinary than they believed themselves, he said. The head of IBM's Hursley research laboratory was an Oxford classicist.

The problem was that, although money was going into research and development, the matter of staffing had been left entirely to evolution.

Students from these courses have been successful in finding work.

Most of the students from the conversion course have also found work now, but the difficulty they have had is that the government has expanded the total number of places available under the IT programme from 200 in 1982/1983 to 1,000 this year.

Many of the employers surveyed by the Institute welcomed initiatives that increased the number of people with IT skills, but said they would have few vacancies for conversion students.

However, some employers said that students with a first degree in an IT-related subject in addition to a specialist IT qualification were attractive propositions.

But many employers say that their demand is mainly either for good first degree graduates in electronics or computer science, or for people with several years' relevant experience.

Most employers as yet seem to doubt that the government's IT advanced courses, especially the conversion ones, will convert raw graduates into the experienced engineers and software specialists.

While present demand is greater for experienced people than for trainee graduates, training schemes like the government's Advanced IT programme are the only hope of reducing the skill shortage.

The survey also reveals that the IT programme has only had limited success in attracting arts and business graduates into the industry. Only 8% of the 105 students in the survey sample had an

engineering or computer science or other IT-related subjects.

Learn UNIX and C from the UNIX™ systems company

As anyone who's tried to learn a new skill knows, there's no substitute for hands-on learning. It's as true when you're learning how to use an operating system like UNIX or a language like C as it is when you're learning to play the piano.

That's why all our training courses give you as much time as possible at the keyboard, running a live Unix system.

If you've decided that it's time to learn about Unix or C, you'll find that we have designed a course that's just right for you. Whether you're a programmer, systems designer or manager. Whether you're a newcomer or in need of more advanced training.

To book your place or find out more about our courses, please call 01-828 6661. But don't delay too long. Unix's time has come and demand is likely to be heavy for the limited number of places.

McQuillan is a trademark of Bell Laboratories

I would like to attend the following course in 1984:
UNIX for managers (one day) C101 £150
15 March <input type="checkbox"/> 12 April <input type="checkbox"/> 10 May <input type="checkbox"/>
16 June <input type="checkbox"/> 13 July <input type="checkbox"/>
Introduction to UNIX (two days) C102 £225
5-6 March <input type="checkbox"/> 2-3 April <input type="checkbox"/> 30 April / May <input type="checkbox"/>
4-5 June <input type="checkbox"/> 2-3 July <input type="checkbox"/>
The C programming language (three days) C103 £215
7-9 March <input type="checkbox"/> 4-6 April <input type="checkbox"/> 24 May <input type="checkbox"/>
6-8 June <input type="checkbox"/> 4-6 July <input type="checkbox"/>
Combined UNIX and C course (five days) C104 £350
1-3 March <input type="checkbox"/> 2-4 April <input type="checkbox"/> 30 April / May <input type="checkbox"/>
4-5 June <input type="checkbox"/> 2-3 July <input type="checkbox"/>
C-advanced course (two days) C105 £224
12-13 March <input type="checkbox"/> 8-9 May <input type="checkbox"/> 9-10 July <input type="checkbox"/>
The Pascal programming language (five days) C106 £250
26-30 March <input type="checkbox"/> 21-25 May <input type="checkbox"/> 16-20 July <input type="checkbox"/>

Please send me more details of your courses

Please complete the form and return to Bleasdale Computer Systems, Francis House, Francis Street, London SW1H 1DE. Cheques should be payable to Bleasdale Computer Systems Ltd.

More factories take the plunge

Microelectronics in UK industry is the subject of a recent survey. Philip Hunter examines the results

MICROELECTRONICS is being introduced into UK factories but more slowly than in the US and Japan, with rate of implementation hindered by a shortage of skilled engineers and software specialists.

That is the conclusion of a report on the use of microelectronics in British industry. About 34,000 jobs have been lost in the last two years as a direct consequence of microelectronics being installed in factories, with 6,000 compulsory redundancies, according to the survey, published by the Policy Studies Institute (PSI).

But at the same time, demand for engineers with expertise in microelectronics has increased, and the present total of 46,000 is at least 21,000 fewer than industry needs.

So in theory at least, most, if not all the school leavers who have been denied jobs by the introduction of microelectronics, could find work with the same companies if they trained as engineers.

Most of the training effort so far, however, seems to have been concentrated on existing staff.

About 30,000 engineers were sent by UK manufacturing firms on training courses in the last two years, compared with about 18,000 in the two years 1979 to 1981.

It could be argued that the shortage of engineers is only temporary, caused by the proliferation in use of micros, and that the gap between supply and demand will diminish when most factories have already got their new technology.

Certainly the number of engineers with expertise in microelectronics has risen sharply in the last two years — from 20,000 in 1981 to 46,000 in 1983.

Almost half say they rely mainly on training existing staff to obtain engineers, but about half expect

to send no one on training courses in the next two years.

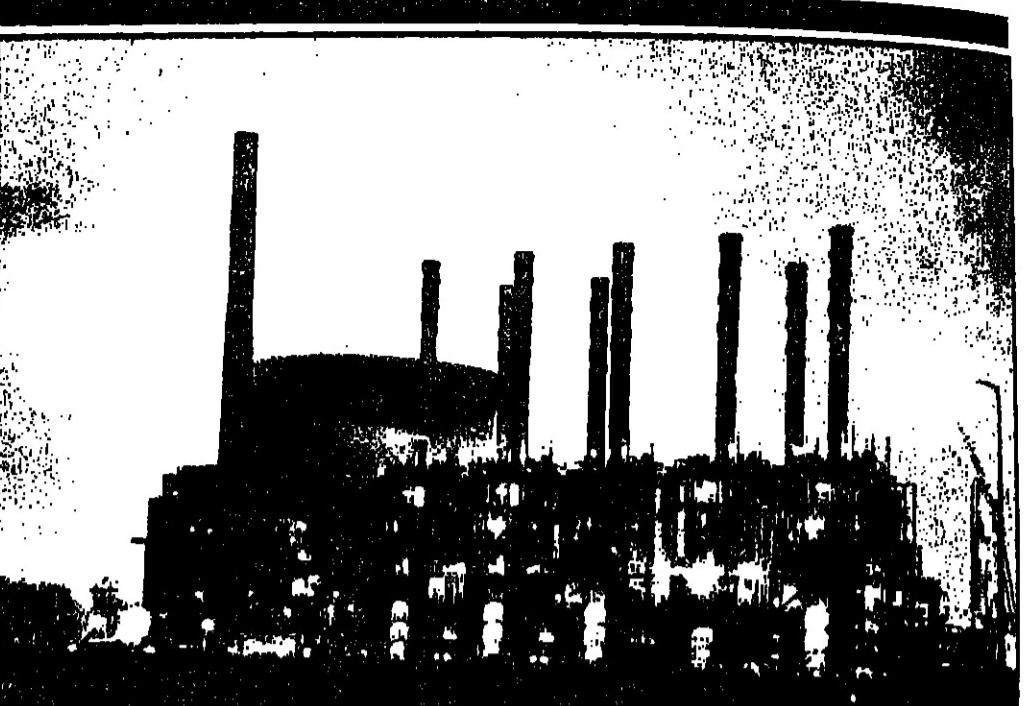

This might make sense from the point of view of these individual firms, most of which also say they do not need any more engineers anyway. But it does not make sense from the point of view of industry as a whole.

About 30,000 engineers were sent by UK manufacturing firms on training courses in the last two years, compared with about 18,000 in the two years 1979 to 1981.

It could be argued that the shortage of engineers is only temporary, caused by the proliferation in use of micros, and that the gap between supply and demand will diminish when most factories have already got their new technology.

Certainly the number of engineers with expertise in microelectronics has risen sharply in the last two years — from 20,000 in 1981 to 46,000 in 1983.

And despite the shortage of

UK factories are steadily switching on to microelectronics.

skilled staff, factories are steadily switching on to microelectronics.

The 1,200 factories in the survey sample, 17% say that they use microelectronics in their products, and 61% in their production processes in 1983. This compares with 10% in products and 39% in production for 1981.

Partly because of the shortage of

engineers, a quarter of the factories in the survey that use microelectronics say that they do not have a single trained engineer on their staff, and rely entirely on support from the supplier of the microprocessor equipment.

Half of the UK's factories now use microelectronics, or plan to soon. Of these only 6% say that opposition from the shop floor or unions have hindered the introduction of the new technology.

Therefore, the survey can be said to have shattered two popular myths: that new technology is opposed by unions, and that it destroys jobs.

Although 34,000 net jobs seem to have been lost as a result of microelectronics being brought into UK factories, this figure does not take account of jobs created in the firms making the microprocessor equipment. Nor does it reflect jobs saved indirectly through more efficient production resulting from the new technology.

Many firms have so far avoided job losses through the introduction of microelectronics. Two thirds of the firms in the survey say that there had been no significant change in numbers employed because of it, although there may have been redundancies for other reasons.

More than two firms in five in the survey cite the general economic situation, sometimes a euphemism for lethargy or ignorance, as the major obstacle to the use of microelectronics in their factories.

More specifically, 14% say that problems with software is the main difficulty, and 10% blame problems with sensors. Both of these reasons point indirectly to the one central difficulty, the shortage of skilled staff, which bedevils the computer industry as a whole.

Problems with the chips themselves seem less important, with only 7% of the firms in the survey putting them top of the list of difficulties.

Microelectronics' suppliers can also take heart from the fact that the small firms that have taken the plunge into new technology say that they have found the benefits greater than expected, while only one in 14 has been disappointed.

However, there is less reassurance for the industry in the reasons given by some firms for believing that they have no scope for using microelectronics.

High cost of development is given as the main obstacle by 33% of firms that have so far shunned microelectronics, and plan to continue to do so. Many firms say they have never looked into the possibility, not knowing what is available nor how it could be applied.

Another common excuse is that microelectronics would be inappropriate because too many different types of product are made in the factory, or because the firm specialises in custom applications.

Many firms look outside for technical help with implementing microelectronics. The most common source of external help are the suppliers of the equipment, with 73% of the firms in the survey seeking their support.

But the government's Micropro-

At Reflex, we've put together a range of products to help you project a professional image for all your computerised information. For training, sales and marketing presentations, internal management meetings — in fact, anywhere that you need to display your data for all to see.

For slide presentations, our Instant Computer Camera: simply creates an exact copy of the screen onto 35mm slides via a direct output cable — in minutes, ready to use. Quality is ensured by the camera's high resolution.

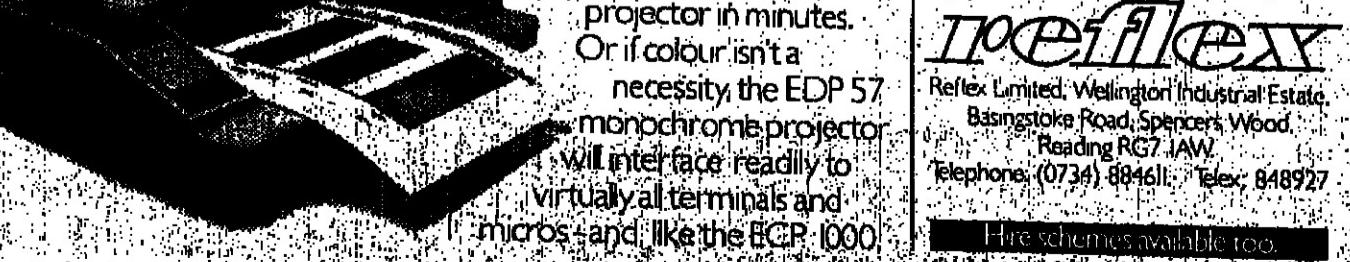

And it's small enough to carry in your briefcase.

For a really professional presentation, our ultra-high resolution mono or colour data projectors offer you the ultimate solution, allowing you to project "live" data directly from your micro or terminal.

The ECP 1000 is a very high resolution (1000 line, 30 MHz bandwidth) colour projector that uses revolutionary Laser Aligned Dicroics (LAD) to converge colours automatically within the unit. This gives a sharper image, and means that anyone can set up the projector in minutes.

Or if colour isn't a necessity, the EDP 57 monochrome projector will interface readily to virtually all terminals and micros — and like the ECP 1000,

more professional way to project the right image for your company.

More professional way to project the right image for your company.

Canadians cut down Cobol slog

by Claire Gooding
A CANADIAN firm is presenting its "intelligent Cobol" to the US Department of Defence in a bid to revive the Department's Stars programme for software reliability.

Ontario-based Netron claims that its Computer Aided Programming technique cuts out 90% of coding, and also claims the technique can supply most of the requirements which the Department specified its long-term plan for Stars (Software Technology for Advanced Reliable Systems).

"Stars was scheduled to be completed by the year 2000," explains Netron's marketing manager Paul Paetz. "We believe that we can supply most of what is required already. The Department has only specified in a very general way, partly because of the cutbacks. We are going to put forward a proposal to complete the specification with the programming tool within a couple of years."

Netron, based in Ontario, has specialised in Wang-based systems for the last couple of years, and recently launched the tool as a way of producing code for IBM.

The tool uses some "expert systems" principles to define which of its re-usable modules can be used in new applications, which need further specification, and which need totally new code to be generated. The specifications are kept separate from the source code, which is generated complete, but can be amended by hand.

Netron is working on a version of the programming aid which can be used to automate existing applications rather than being of use only in building new programs.

Over half of its 55 research and development staff are working on the product, which already earns Netron's bread and butter by generating turnkey applications. This sells to software houses and other users for \$16,000 for a one-terminal system.

"What we have done differently is to apply artificial intelligence and engineering principles to soft-

ware production. It is half way between the fourth and fifth generation of software."

Cobol seems an unlikely vehicle for a project which was planned to end in the year 2000. But the product was built to use Cobol only because of the commercial importance of the language, and according to Paetz, the concepts used could be adapted to another language such as Ada and any other target hardware.

"It uses machine and language-independent principles," says Paetz. "It uses the concept of 'frames' developed at Massachusetts Institute of Technology. Basically, one reduces the tasks into the smallest possible elements and builds a hierarchy.

"What we have done differently is to apply artificial intelligence and engineering principles to soft-

TALBOT... Alvey will evolve three generations of Ipses.

Alvey work is near

by Claire Gooding
TOP independent Pick consultant Jonathon Sisk is coming to the UK to give courses on the increasingly popular multi-user operating system.

Until recently, the Pick world has been a closed one, and training on Pick has been supplied only by the hardware distributors such as Electronic Data Processing of Sheffield, Interactive Data Machines of Doncaster, the University College of London, and Ashton Technology, whose courses are tied to sales of Pick-based systems.

Now Taurus Technology, the training subsidiary of the Spain group, has recognised the swell of interest in Pick and is supplying the first hardware-independent

course on the system.

Sisk will be taking the first one-week course and also a one-day "Management Overview" in London in early June, and will be running a similar course for Spain in Australia.

Sisk is well-known among the Pick community as the author of the *Pick Pocket Guide*, a neat pamphlet-sized guide which gives a quick-reference for programmers and operators on all Pick verbs and commands.

He has worked Pick closely with Dick Pick, originator of the Pick system, and Pick's company Pick Systems, and has long experience giving training courses for Pick licensees.

"Demand for independent

training has become noticeably higher in the last couple of years," says Sisk. "It used to be the case that the licensees wanted training only for their technical people, but now there's a definite interest in a general all-comers Pick course."

Sisk attributes the increase of Pick's sudden respectability and availability, now that longstanding law-suits have been cleared up, as well as Pick's arrival on powerful 68000-based 32-bit micros, which bring its price down.

According to Doug Woodward, managing director of the Spain Group in the UK, the Pick course is complementary to the company's Unix training, not a rival or indicating a change of loyalties.

times faster for some programs.

The new high-performance version supports the Animator and Forms-2 development tools. Its arrival on the scene means that the standard version of the Level II compiler will be re-named Compact Level II Cobol.

The contents of the research came into sharper focus at a meeting of the British Computer Society in London last week. Alvey director David Talbot, outlining the thinking behind the national plan, said they would evolve three generations of Ipses.

Systems Designers has already been involved with Ipses design with its recently-launched product Perspective. But McDermid admitted Perspective was only a first step.

The first, under the Unix operating system and file-based, would be tried out on industrial pundits to get their views. The second, not necessarily Unix-based, would use the results with a

clean-sheet approach aimed at achieving life-cycle coverage of program development, taking the distributed database approach.

The third would seek to incorporate what had been learned by them about intelligent knowledge-based systems.

He emphasised that although the directors had a small budget compared to many of their competitors, the research content of the Alvey Programme would be larger than that of most industrial R&D.

A broad strategy document is issued last December announced the goal as an information systems factory to be designed at a cost of £65 million by 1985.

John McDermid, of Systems Designers, told the BCS meeting that it was improbable that formal methods of specification would be introduced early in the life-cycle of software development.

Systems Designers has already been involved with Ipses design with its recently-launched product Perspective. But McDermid admitted Perspective was only a first step.

PEOPLE

■ Alpha Microsystems GB has appointed Lauri Bright as dealer manager. He joins the company from LSI.

■ The board of Tymshare UK has appointed Jerry Goldman (below) as managing director. He joined the company in 1979 as City branch manager and in 1981 was promoted to area manager. Before joining Tymshare UK Goldman spent nine years as a senior salesman with IBM in the UK and Israel.

■ Jane Smithard (above) has joined Micro Focus as "in-house" legal counsel and company secretary. A barrister, she will be responsible for all secretarial functions, and will play a prominent role in the company's contract negotiations. She spent several years with Control Data. Jeanette Lemon has joined Micro Focus as personnel manager based in Newbury. For 15 years she worked for ICL.

■ Qudos Systems has appointed Ian Temple to be responsible for sales and marketing of the Rescue micro database product.

■ Prime Computer (UK) has appointed two support managers. Peter Towers is South regional support manager, with an area from North London via Oxford, and West to South Wales, while Paul Dean is support manager for the Scottish area. Towers has been with Prime for five years and was previously Northern district support manager for Prime's North and West District for a year. Dean has worked for Prime for four years in software support in Scotland.

■ Norwell Computer Services has recruited Karl Kaegler as sales director. He was previously sales manager with Automatic Information Management.

■ At a board meeting of Datastream Richard Stein, finance director of ROC, was appointed a director of the company. D. W. N. Pitts resigned as a director on February 16.

■ Future Technology Systems has appointed Bernard Crulckshanks as production manager. He was previously production manager with Osprey Electronics.

■ A new systems analyst has joined Alpha Micro. He is Brendan Byrne, from Randar Computer Systems of Oldbury, West Midlands, where he worked as a support analyst.

■ Brixton-based computer manufacturer Jaragate has recruited a further three staff in systems design and sales. Paul Horwitz has been appointed systems design manager, and supporting him as systems designer is Ian Anderson.

Sales manager Ivan Stillwell has five years' experience in running his own software consultancy.

■

Ericsson Information Systems has appointed Tony Stevens as national sales manager, Data Terminals Division. He was formerly Midland regional sales manager for Datapoint, and has more than 20 years' experience in data processing and information technology.

■ Yogie Trivedy has joined Turnkey & Applied Computing Systems as sales representative. Previously with British Olivetti, he has more than five years' experience of selling mini and microcomputer systems.

DIARY

MARCH 15

Image Processing Using Starlink. BCS Dundee. R. Stobie, Royal Observatory, Edinburgh. Angus Hotel, Dundee. 7.15.

Communications in the High Street. BSC Guildford. Stuart Senior, Delaine Huskin & Sell, Ballroom Annex, Stoke Hotel, Guildford. 7.00.

Today's Office is a Place; Tomorrow's will be a System. BCS West Herts. David Flirberg, BCS President, Aubrey Park Hotel, Redbourn. 8.00.

Introduction to CPM. Course, Polytechnic of the South Bank, London. 9.30. £55 including refreshments. For further details phone 01-928 2790.

Visit to IBM Greenock, BCS Glasgow. Limited numbers. Contact J. C. Fleming on 041-886 4141.

CICS/VS Advance Design and Programming. Circle Education four-day course, London. £625. Further details from Brenda Harris on (0753) 889139.

CORE Workshop, Systems Designers Ltd five-day training course, Frimley Hall Hotel, Camberley, Surrey. £550 plus Vat. Further details from Keith Evans on (0251) 22161.

Fundamentals of Computer Operations. Compuware two-day course, Training School, Cannock, Staffs. £80 plus Vat and seminar. London. Free. Details phone (0272) 290631.

Programming for Database DL/I. Compuware four-day course, Training School, Cannock, Staffs. £80 plus Vat and accommodation. For further details phone 01-242 8697.

Reducing Energy Costs with VM/CMS for Programmers. Altergo Education four-day course, London. £450. For further details phone 01-486 7288.

VSE Job Control for Programmers. Altergo Education two-day course, £290. For further details phone 01-486 7288.

Computers in Accounting; Developing Leadership Skills. MSS two-day courses, Worthing. Inventory Management Control. MSS three-day course, Worthing. Project Management and Control in DP. Basic Fortran Programming. MSS - four-day courses, Worthing. For further details phone (0903) 347556.

Network Design, Frost and Sullivan 2½-day seminar, Park Lane Hotel, London. £425 plus Vat. Further details from Carolyn Budd on 01-486 00345.

The BBC Micro. BCS North Staffs. Joint meeting with the BBC. Cobol for Non-Programmers. Staffs. BIS Applied Systems three-day course, London. £350 plus 7.30 for 8.00.

■ Graham Coulson, previously a programmer with Compute Aillaries, has joined Maidenhead-based systems builders MicroScope as an analyst/programmer. In his new position, he is currently project leader, responsible for systems development work on the Micro Space reservation and accounting system for tour operators, which is being developed for Panorama Holidays.

■ Modular Technology announces the promotion of Garry Gordon to UK sales manager, after six months as senior sales engineer. Previously, he spent three years as area sales executive with Codex UK (Motorola).

■ The Ryan-McFarland Corporation has appointed Barbara Franscione (below) as product support manager with responsibilities for marketing and customer support of the RMX/Cobol product range in Europe. She previously spent several years with ITT, responsible for management information systems, and was later appointed software evaluator of ITT's Microcomputer Division.

■ Brixton-based computer manufacturer Jaragate has recruited a further three staff in systems design and sales. Paul Horwitz has been appointed systems design manager, and supporting him as systems designer is Ian Anderson.

Sales manager Ivan Stillwell has five years' experience in running his own software consultancy.

■

Ericsson Information Systems has appointed Tony Stevens as national sales manager, Data Terminals Division. He was formerly Midland regional sales manager for Datapoint, and has more than 20 years' experience in data processing and information technology.

■ Yogie Trivedy has joined Turnkey & Applied Computing Systems as sales representative. Previously with British Olivetti, he has more than five years' experience of selling mini and microcomputer systems.

■

PEOPLE

■ Langton, a computer and communication consultancy and system house has appointed Jeffrey Steel as executive director; Joan Gibson (left) has been appointed to similar responsibilities in office automation; and Iwan Newman (centre), has been appointed a business area manager. Newman, as a senior Burroughs man, twice won the annual Langton essay award. Other new consultants joining the Langton team include Alan Radlett (right) who will be in the telecommunications group.

■

■ The Ryan-McFarland Corporation has appointed Barbara Franscione (below) as product support manager with responsibilities for marketing and customer support of the RMX/Cobol product range in Europe. She previously spent several years with ITT, responsible for management information systems, and was later appointed software evaluator of ITT's Microcomputer Division.

■ Brixton-based computer manufacturer Jaragate has recruited a further three staff in systems design and sales. Paul Horwitz has been appointed systems design manager, and supporting him as systems designer is Ian Anderson.

Sales manager Ivan Stillwell has five years' experience in running his own software consultancy.

■

Ericsson Information Systems has appointed Tony Stevens as national sales manager, Data Terminals Division. He was formerly Midland regional sales manager for Datapoint, and has more than 20 years' experience in data processing and information technology.

■ Yogie Trivedy has joined Turnkey & Applied Computing Systems as sales representative. Previously with British Olivetti, he has more than five years' experience of selling mini and microcomputer systems.

■

■ Two management appointments have been announced by HIS Software to co-ordinate the development and launch of new systems. As planning manager, Don Urquhart, will be responsible for the company's technical and market research and for planning new products. He has been with HIS for nine years, before which he worked for ICL and Sperry Univac. John Wills becomes product marketing manager for HIS Software. He spent 15 years in banking before joining HIS in 1977. He was formerly general manager of HIS Luxembourg offices.

■ Three former EDP employees have formed an independent software house specializing in the Pick operating system. The company, Osys Software, was founded jointly by John Moore (left), previously software product manager at EDP; John Scholey (centre), who was with EDP for 14 years and an associate director and chief programmer; and Alan Watt (right) who has worked in the computer industry since 1971.

■ IMI Computing has appointed Ray Davies as marketing manager, with responsibility for the promotion of all the company's products and services in the IBM marketplace. Davies' data processing career spans 15 years, and in the last year, he has been promoting IMI Computing's specialist IBM 8100 services.

■ Andrew Duncan has been appointed Software Consultant by Automatic Test Engineering. He joins ATB from Hewlett Packard where he was a senior systems engineer involved in the training of personnel in the use of the 3060 ATB system.

■ Stephen Robinson has joined Drive Computing as an account manager. He was previously with Olivetti where he worked for 14 years.

■ Philip Crawford joins MSA's Manufacturing Support Division with a year's experience within MSA already. He was previously account manager at MSA Inc, responsible for after-sales support for the new automatic credit charging system, Sentinel, and for Jupiter 7, the new colour graphics terminal. Before joining Ambitron, Cridland spent six years with Computer Technology as a service engineer.

■ Peter Deacon and Lawrence Jones, previously with Vector General's former UK distributors R. and H. Systems, have joined Vector General as systems engineers, responsible for customer support and maintenance. John Harris, formerly with Software Sciences, also joins Vector General as systems engineer. Another new appointment is that of Mandy Lowe, formerly secretary to the managing director of Fire Engineering Associates, who becomes Vector General office manager.

■ Ferranti Computer Systems, Cheshire Heath Division, has appointed a new sales executive, Paul Fernback, for its Fire and Security Systems Group. He joins from Carter, Thomas, Ashworth and Co, where he was export sales manager.

■ Microvitec has appointed Alan Bland as national accounts sales manager. He was previously with Mattel Electronics as regional sales manager for Aquarius Computers and Intellivision.

■ Terry Cartwright is appointed group director of marketing for Prism Technology (Holdings), the recently announced parent company controlling Prism's high technology distribution and EEC Publications. Cartwright joined ECC four and a half years ago as marketing director and became managing director two years later.

■ Martin Cutler, computer development manager in the Management Services Division of W. H. Smith based in Greenbridge, Swindon, is appointed technical services manager there. He succeeds David Gaynor, who took up a new post with W. H. Smith Cable Services.

■ Hal Computers has appointed Ruth Long (below) dealer sales specialist, to liaise with and support Hal's dealer network.

■ John Cottrell, (left), managing director of STC Telecommunications and Tim Utterton (right), managing director of STC Communications International, have been appointed to the main board of Standard Telephones and Cables. Cottrell became managing director, STC Communications International in February, 1983 and took up his present position last July. He is also a director of two other STC companies: Standard Telecommunications Laboratories and IAL. Utterton became chairman of IAL and managing director, STC Communications International in 1983.

■ Feltix Learning Systems has appointed Alastair Hardie as managing director. The company has already produced and published 18 interactive video programs which are available to business, industry and the public sector. Hardie was formerly general manager.

■ Paradyne has appointed Roger Archer as sales director, European distributors, with responsibility for sales through all European distributors including Israel and Turkey. He has held senior positions with Prime and ICL.

■ Terry Cartwright is appointed group director of marketing for Prism Technology (Holdings), the recently announced parent company controlling Prism's high technology distribution and EEC Publications. Cartwright joined ECC four and a half years ago as marketing director and became managing director two years later.

■ Martin Cutler, computer development manager in the Management Services Division of W. H. Smith based in Greenbridge, Swindon, is appointed technical services manager there. He succeeds David Gaynor, who took up a new post with W. H. Smith Cable Services.

■ Hal Computers has appointed Ruth Long (below) dealer sales specialist, to liaise with and support Hal's dealer network.

■ John Cottrell, (left), managing director of STC Telecommunications and Tim Utterton (right), managing director of STC Communications International, have been appointed to the main board of Standard Telephones and Cables. Cottrell became managing director, STC Communications International in February, 1983 and took up his present position last July. He is also a director of two other STC companies: Standard Telecommunications Laboratories and IAL. Utterton became chairman of IAL and managing director, STC Communications International in 1983.

■ Feltix Learning Systems has appointed Alastair Hardie as managing director. The company has already produced and published 18 interactive video programs which are available to business, industry and the public sector. Hardie was formerly general manager.

■ Paradyne has appointed Roger Archer as sales director, European distributors, with responsibility for sales through all European distributors including Israel and Turkey. He has held senior positions with Prime and ICL.

CONFERENCES

■ THE Association of Simula Users, with the support of the University of Newcastle-upon-Tyne and the Centre for Software Reliability, is arranging a two-day seminar on computing system reliability at Newcastle University on March 27. The papers, to be presented by a set of prominent workers in this field, will address system structure, fault tolerance, programming languages, distributed systems, parallel programs, quality engineering and reliability measurement. Non-ASU members are welcome. Further information from Ron Kerr, Computing Laboratory, Newcastle University. Tel: (0632) 329233.

■ FROM March 26-30 the University of Manchester Computer Graphics Unit will repeat its successful course on interactive computer graphics. The course is updated regularly to cover recent developments, and topics to be discussed include types and uses of graphics equipment, graphics programming with GKS, algorithms for vector and raster devices, drawing curves and surfaces, machine interface design and software, colour theory, 3-D graphics including generation of shaded raster images, and a review of graphics packages. The fee is £150. Further details from Irene Delay on 061-273 7121, ext 5619.

■ A THREE-DAY seminar to be held by Frost and Sullivan at Kensington Palace Hotel, London, from March 26-28, will examine source data entry across a wide range of applications, illustrate the benefits of capturing data at source and examine with examples the many different systems becoming available. An important part of the programme focuses upon the process of designing, selecting, field testing cost justification and installing a source data entry system. Also discussed will be the design of a suitable training programme, the trades unions viewpoint and the need to keep the customer fully informed. The seminar is designed for managers and staff at all levels. Details from Carolyn Budd, on 01-486 00345.

■ A COURSE ON Cambridge Rings will be held at the University of Kent from April 2-4 under the auspices of the Joint Network Team of the Computing Board and Research Councils and is primarily for the benefit of universities. The fee is £100. Details from Carolyn Budd, on 01-486 00345.

BCS JUBILEE LECTURE

Technology has evolved . . .

... but will the new fifth generation, based on micros, be revolutionary? Gordon Bell's lecture explored the theme

GORDON BELL, once head of engineering at Digital Equipment, and now chief technical officer at start-up company Encore Computer, yesterday (Wednesday) gave the Second Annual British Computer Society Jubilee Lecture, sponsored by Computer Weekly.

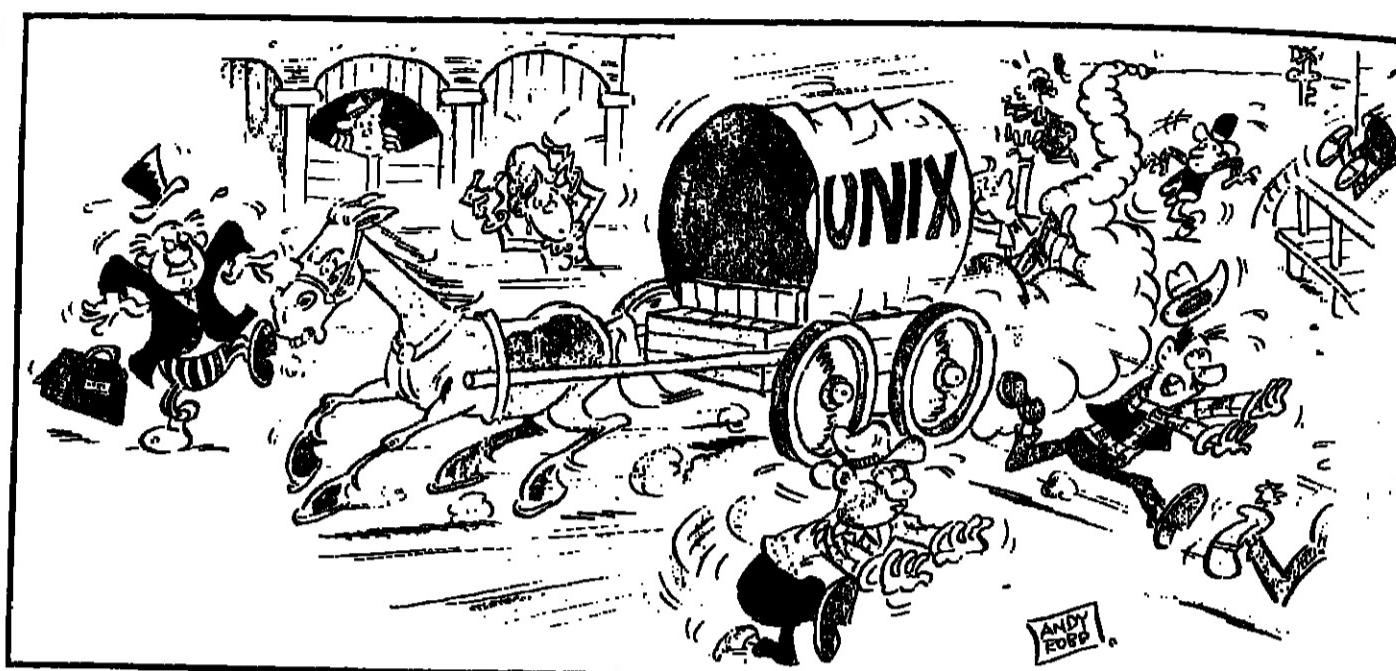

Bell was responsible for DEC's PDP 4, 5, and 6 minicomputers, and also worked on the PDP 11. He is a widely-published author on computer architecture and design and holds several patents in the computer and logical design area.

Reprinted below is some of the material used by Bell in his lecture at the Royal Society in London.

Bell's lecture is entitled "Computer Evolution". The abstract for the speech is as follows: since the ENIAC, the early Manchester machines, and EDSAC, computer development has been evolutionary. Revolutionary circuit technology has provided new structures following the time-worn path.

Can the new fifth generation, based on ultra-large scale integration, be any different, using either revolutionary concepts or more parallelism?

LIKE the minicomputer, hundreds of information processing products can be built using microprocessors and their associated semiconductor and electro-mechanical peripherals because

The only people who love Unix are its parents and those who grew up with it.

or two helpers.

There are about 100 groups of one to a dozen or so engineers who are building workstations for various engineering and business professionals. Design consists of assembling the following:

- boards with microprocessors, disc, CRT and communication controllers that use one of several standard buses e.g. Multibus, Obus, or VME/Versabus;
- appropriate discs and CRTs;
- standard or custom enclosures;
- a licensed version of Unix available from a myriad of suppliers;
- generic software including word processing, spreadsheet, etc.

Each new start-up company believes its product and business plan will beat Apollo, one of the first entrants into the high performance workstation market. Just after going public, Apollo was valued at \$1 billion dollars in the fall of 1983; on annual sales of less than \$100 million with less than 1,000 employees.

In contrast, DEC has a valuation of about \$4 billion with sales of \$4 billion and a workforce of over 70,000.

A typical workstation start-up company compares itself with Apollo on two data points: its start-up date, which is usually one to two years after Apollo (when systems were easier to build), and the current month's annual shipments.

In this fashion, within two years each of 100 companies will be valued at \$1 billion, giving a valuation of workstation companies of \$10 billion to \$100 billion — at least one order of magnitude greater than any optimistic projection of the market.

This valuation does not include the established companies, such as IBM, whose values are approximately equal to sales and who may believe workstations are mainly mainframe products.

Thus today's assembly operations that permit this great overstatement about hi tech are at the root of what is surely to be one of the largest corporate re-evaluations in the history of American business. The only barrier to entering the industry as a board, software or system supplier is having a personal computer capable of generating a business plan.

Formal standards by US and international standards groups establish many of the standards (communications, for designers). These are typically low-level signalling environments, communications links and languages.

An OEM approach usually requires a product range, not just a point product. An OEM customer often requires services, and always requires high-level applications and field support assistance.

An end-user approach requires both a wide product range and complete customer service.

An applications software company (eg CAD) that has to invent

operating systems and application software file formats.

The levels, and corresponding standards, for today's micro-based products are:

- hi tech semiconductor microprocessors (Z80 through 8086 through to 68000 or National 32032) and memory chips (16K through to 64K through to 256K bits/chip);
- boards based on a standard bus (\$100 through to Multibus I through to Multibus II or Versabus/VME; IBM-PC cards);
- electromechanical disc (8in. floppy through to 5in. floppy through to 3in. Winchester disc);
- hardware systems are particular to the structure, but usually use Multibus form factors;
- operating systems (Basic through to CP/M through to MS/DOS through to Unix);
- languages (Basic through to Pascal through to C);
- generic applications (eg, word processing, spread sheets);
- vertical applications within various professional and intellectual domains (eg, accounting, structured design, project scheduling, etc).

Large vendors such as DEC and IBM treat computing as a substitutable commodity in a complete market place. Computing can be traded off among the personal, shared, departmental mini, mainframe levels over a price range of \$1,000 to \$1 million.

There is some evidence that growing use of personal computers increases the need for mainframes by giving more users access to tightly connected databases, instead of decreasing the need for mainframe power.

Computing carried out in any fashion should be treated as part of a single, available market.

Many alternatives are possible for supplying a range of products, from the purely general purpose base system, to the producer that has been highly customised by hardware and software.

The critical mass (or economy of scale) is in the sidescale sales, distribution, installation and service of hardware products. In addition to having very good products, winning requires both the OEM and end-user channels to get critical mass of product distribution and wipe out costs.

An OEM approach usually requires a product range, not just a point product. An OEM customer often requires services, and always requires high-level applications and field support assistance.

An end-user approach requires both a wide product range and complete customer service.

An applications software company (eg CAD) that has to invent

its own hardware system is likely to become either obsolete with hardware, especially when reviewing what happened in the case of minis, or fall behind in its software development.

Furthermore, the company is limited by growth in its own market because investment is required in both vanity hardware and its software development.

Chip makers and system builders who had no means of building software were able to get a system relatively cheaply. Thus, we have more support and the beginning of a standard.

We have turned a large part of our future systems development over to AT&T for one of the key interfaces by adopting Unix.

Much work is required to have a system that supports 803 computing concepts. In order to evolve

BCS JUBILEE LECTURE

The fifth generation – can it add anything?

towards the generality demanded by the broad market, the extensions will include:

- Virtual memory. This function was worked out about five years ago and has been in operation for at least four years in the Vax version of Unix at Berkeley called 4.1.

- Special functions for real time and transaction processing. Unix is being extended and adapted in incompatible ways by diverse organisations.

- Human interfaces that are competitive with the PC. Unix grew up in a timesharing world using dumb terminals. Windowing and fast interaction are critical.

- Multiprocessing. With the micro, many companies started to extend Unix for multiprocessing.

- Networks. Given the origin of Unix in communications, we should demand modern communications capabilities.

- Fully distributed processing across a LAN to form LANCs. The University of Newcastle, Berkeley and several companies have all implemented incompatible systems for fully-distributed processing.

- The Unix phenomenon illustrates the power of standardisation, and we can learn from it. Like all operating systems, the only people who really love Unix are its parents and those who grew up with it. This is a large set. It also illustrates a recurring theme of standards: in order to make forward progress, one has to regress for a while.

- Unix is almost a standard. There is not, however, a single version that is available in "bubble packs" that operates on a variety of systems. Each version requires the manufacturer integrated and distributed;

- through traditional OEM arrangements by encouraging others to embed a computer in other systems, as characterised by the early technical OEM marketing of DEC;

- through other channels such as distributors, distributors to sub-distributors, retail outlets, installers, etc.

Software product segments, ie, new professional software application products, will form from today's experts in existing companies which either have vanity hardware or OEM hardware because the true value of the product is completely contained in the software, ultimately, these companies will disappear to be replaced by standard systems supplied by hardware vendors such as IBM; and software-only companies staffed by the experts who create the professional applications.

For a while, it looked as if a specialised market existed for the growing number of users who wanted Unix. Today, Unix promises to be the whole market, not a specialised market in itself.

Highly interactive computing with Unix is no longer a niche, but rather, the product constraint future users are all likely to demand, or at least specify, IBM has shown its flexibility in adopting industry standards rather than forcing its own in a de facto fashion. If customers want it, IBM will likely supply it. IBM appears to be near announcement of Unix across the range from PCs to mainframes.

In a similar fashion, every minicomputer and microcomputer supplier will supply this standard in a similar way. While the combined market is large, the fundamental market has not been expanded, but merely made more accessible by every manufacturer.

The result will be a much greater fall-out of the smallest manufacturers who have inadequate marketing and manufacturing organisations.

Look at the case of minis. The companies who came out on top did so by having fundamentally good, general purpose hardware and then distributing it.

As a "generic" product for a variety of uses, in the case of minis, DEC opened up many markets with the PDP-11 in the early 70s.

DEC didn't give away operating systems to universities, especially the source code. Unix was essen-

tially free for a limited market to engineers, scientists and business analysts. All have the organisational overhead to start, but none have the critical mass to succeed, except those which are currently well established such as Apollo, Apple, Convergent Technology and Sun.

Finally, the 32-bit personal machines, a broader range, and the introduction of full distributed computing in local area network (LAN) clusters, the need for high performance computers for incompatible workstations at a fraction of the cost.

With much lower priced machines, a broader range, and the introduction of full distributed computing in local area network (LAN) clusters, the need for high performance computers for incompatible workstations at a fraction of the cost.

Several of the BUNCH have been relegated to decline through a declining base as all customers standardise on IBM compatible hardware. The microprocessor-based systems are a convenient product to market.

Old line minicomputer and mainframe supplier markets will not easily be supplanted by new supermicro suppliers because system pricing makes distributing one-product, low-priced, complex systems difficult.

Energetic and unique software applications (eg CAD) which run on a few energetic structures (PCs, workstations and superminis) will fuel this generation.

To sum up:

- There are no barriers to entering what is decidedly not a high-tech industry.

- Economy of scale is most important, distribution and service.

- Economy of scale of manufac-

turing may hold for a single product and single company such as for the personal computer and IBM, but not in general.

■ Time to market is far more important than economy of scale – which decidedly favours the entrepreneurial energy of start-ups who provide a single product.

■ Large vendors such as IBM and DEC believe it's important to supply computing on a full service basis – virtually no organisation provides a full line of networked, compatible, multi-vendor products.

■ Old line minicomputer and mainframe supplier markets will not easily be supplanted by new supermicro suppliers because system pricing makes distributing one-product, low-priced, complex systems difficult.

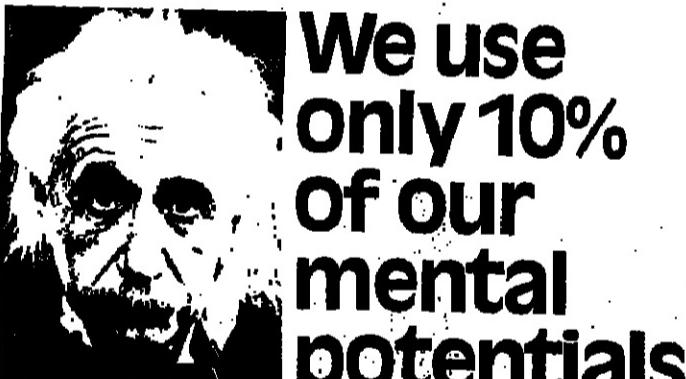

■ Energetic and unique software applications (eg CAD) which run on a few energetic structures (PCs, workstations and superminis) will fuel this generation.

To sum up:

- There are no barriers to entering what is decidedly not a high-tech industry.

- Economy of scale is most important, distribution and service.

■ Economy of scale of manufac-

We use only 10% of our mental potentials

These are the words of Albert Einstein the greatest physicist of recent times. L. Ron Hubbard's discoveries in the field of the mind prove today that Einstein was right. In his book *Dianetics*. The Modern Science of Mental Health, L. Ron Hubbard takes one more gigantic step in this direction. He demonstrates how anyone can use his discoveries and rid himself of the barriers that have so far prevented him from using his mental potentials fully.

More and more people, including artists, M.D.'s, managers and workers use *Dianetics* technology. And the thousands of written reports on their successes are the best proof for the efficiency of this book.

Available in Paperback, 420 pages. Price £3.50 (including p&p).

Order your own copy today! Send the order form below to:

DIANECS Information Centre, FREEPOST, Saint Hill Manor, East Grinstead, Sussex RH19 4ZB.

DATA TRANSMISSION!

Very accurate, very Sanderson.

How to keep track of over 700 buses

South Yorkshire Passenger Transport Executive's buses weren't keeping to time until it discovered the concept of radio data transmission

PICTURE 710 buses housed in four garages in Sheffield, 560 or more of them on the road in the peak hour, three buses a minute leaving the garages in the peak period, and timetables to be kept.

There can be nothing quite as frustrating as having a well-defined and understood bus operating problem without being able to see a solution in sight.

In early 1982, that was exactly the position in which the South Yorkshire Passenger Transport Executive found itself.

In the day-to-day running of a garage, the pressure is on the regulator inspector. His job is to allocate the buses to each route and ensure that they leave the starting points on time.

Timetables, bus suitability and regular bus maintenance programmes all need to be taken into account so that the regulator knows the location and availability of all buses in the fleet.

So far so good. But the best laid plans are disrupted. No two days are the same. Breakdowns, late starts, unplanned maintenance, cleaning – all upset the timetable.

Consequently, the regulator needs constantly updated information from numerous sources – the central control room, which is in radio contact with all drivers, the fitters in the maintenance departments, other garage personnel and even the three other garages.

And he doesn't just need to be aware of problems as they occur; confirmation that things are going to plan is just vital.

The executive was aware that, despite a lot of willing people trying hard with telephones, paper and verbal messages, the regulators were just not in possession of all the information they needed to do their jobs properly.

Research had shown that the information available between the control room and the regulators was an average 45 minutes out-of-date, too late to be able to put right anything that had gone wrong. The lines of communication between the garages and the control room needed improving so that everyone would be instantly aware of individual movements.

A central database of information stored in a computer system, with access available to the regulators and control room staff through terminals presented only one logical solution.

Regulators spend a fair proportion of time away from the garage. If a bus fails en route, they need to know immediately in order to keep both sites up-to-date and availability quickly to dispatch a replacement.

Script incorporates a CMOS

replacement with the minimum of delay.

The Executive considered facsimile transmission between the garages and the control room, but all this achieved was another picture – another historical record. The Executive were on the verge of giving up, when a computer company contacted them.

Sanderson Computers was diversifying and had started to develop a hand-held terminal in early 1983. A hand-held device capable

of two-way, real time communication with a distant computer system would solve the Executive's problem, thought Sanderson. It would also provide a marketable product suitable for a variety of applications other than traditional data capture.

An agreement was made to develop a prototype. The communication mode was critical. It must not inhibit the mobility of the regulator; it had to work without the risk of interference from vehicles and buildings, too. Infra-red and ultrasonics were both considered and discarded, but radio transmission was eventually chosen.

The first stage was to develop the prototype terminal so that real time communication between the regulator and a remote computer was possible.

Trials were successful, and Sanderson set out to develop a field-operational production model. Transmission speeds were upgraded and response times improved with the selection of a powerful multi-user microcomputer. General Automation's Zebra range fitted the bill and Sanderson became a dealer for that company.

Utilising the Pick relational database operating system, Zebra provided a proper database structure with an efficient language for systems development. Sanderson Computers also had had experience in developing commercial Pick systems.

During the summer of 1983, the passenger transport systems software was re-written and refined to run off Zebra micro and production models of the terminal – now known as Script (Sanderson Computers Radio Interactive Portable Terminal) – were produced.

Script incorporates a CMOS

microprocessor (NSC 800) with up to 16K bytes of ROM; logic circuitry for minimising power consumption and reducing sensitivity to voltage variations; and it uses a replaceable, rechargeable nickel cadmium battery pack.

It has a range of up to two miles and weighs under two pounds. It has a liquid crystal display of eight lines by 20 alphanumeric characters, with a 42-key keyboard.

The Executive has now installed

place from the same garage, another garage or from maintenance, by accessing the vehicle's available file.

The total system works in real time – everybody has access to the same up-to-date information. Instead of working with a one-line delay of 45 minutes, information is now only 15 seconds out of step with events.

The Executive has now installed

The regulators were just not in possession of all the information they needed

a General Automation Zebra 250 with 256K bytes of memory, 35 Mbytes of disc storage, four visual display units and an intelligent base station driving two Script terminals.

Before going operational in one garage, the system has been installed for training. Inspectors, both regulators and control room staff, who have welcomed and worked closely with the project, particularly in the design of its keyboard layout and function names, are jointly writing the operator manuals with management.

More skin to a day in the life of the system than a traditional manual, this will provide reference for new users to see what should be happening at any time in a 24-hour day.

Training will be completed in early 1984 and the first garage will go live with the "bus output machines" as the Script terminals have come to be known among the inspectors. Initially, a 4900 baud communications line will link a VDU in the control room to the garage-located Zebra.

The intention is to avoid implementation problems as far as possible, with a fully tried and tested system and a trained staff.

Chris Longley, the Executive's operating systems manager, comments: "We have waited a long time to find what we believe to be the right solution, and we want to get it right. The co-operation of the inspectors has been very good."

"We want to start off with people believing in the system and with the equipment assisting regulators more positively in performing their tasks with less pressure and more effectiveness."

The second phase will be to install additional systems in the three remaining garages, a larger Zebra processor in the control room and the development of more extensive management reports.

Should a vehicle break down, another may be allocated to take its

PICK

Pick rewards its pilgrims

After two years Pick Systems has launched its new proprietary operating system. Jonathan E. Sisk analyses it

THE third annual Pick Spectrum Conference, sponsored by the International Database Management Association (IDBMA), provided a platform for Pick Systems to describe its newest products to several thousand devoted followers, who made the "pilgrimage" to the MGM Grand Hotel in Reno, Nevada, last month.

Pick is especially proud of the new version, Open Architecture Release 1.0. It is a somewhat radical departure from the standards that he himself established back in 1971. Initially entitled R84, Open Architecture paves the way for the Pick OS to become compatible with the "real" world.

"This release is our response to all of the enhancement requests that we have received over the years from our users," Pick states. "A more appropriate name for the release would be Yes. It allows users to do virtually everything they have ever hoped for."

The name, Open Architecture

Release 1.0, was chosen to replace

the previous convention of using

the calendar year in which the

last official release was R80.

"This does not mean that each

new implementation since 1980

method was 'old' code. On the

contrary, each licensee has been

given the right to make changes

to the system.

Users of the Pick OS maintain

an almost fanatical loyalty to the

product and its eclectic originator,

Dick Pick, who is often referred to

in the press as being the guru of

this cult-like following.

In a recent issue of Computer

Systems News, Pick was captured

on a front page photograph

hanging upside-down in his gravity boots. He was quoted as having

said that this position "makes him think better". An equally off-the-wall article in Business Week quoted "puckish Pick" as spelling the OS "Unix" "E-u-u-c-h-s".

His irreverence for traditional methods and approaches is only exceeded in his fervour by his devotion to the ongoing development of the operating system that bears his name.

The announcements of the completion of the in-house implementation of the Pick operating system on the IBM-PC XT and of the release of the company's proprietary operating system called Open Architecture Release 1.0 were also made to the delight of those users who have waited patiently for Pick to deliver what it has been promising for the last two years.

For those unfamiliar with the Pick operating system, it is a virtual memory-based, multi-user operating system (OS) with an integral database management system that runs on a wide variety of systems, from the IBM-PC XT to the IBM 4300 mainframe.

"The name, Open Architecture

Release 1.0, is chosen to replace

the previous convention of using

the calendar year in which the

last official release was R80.

"This does not mean that each

new implementation since 1980

method was 'old' code. On the

contrary, each licensee has been

given the right to make changes

to the system.

Users of the Pick OS maintain

an almost fanatical loyalty to the

product and its eclectic originator,

Dick Pick, who is often referred to

in the press as being the guru of

this cult-like following.

In a recent issue of Computer

Systems News, Pick was captured

on a front page photograph

hanging upside-down in his gravity boots. He was quoted as having

said that this position "makes him think better". An equally off-the-wall article in Business Week quoted "puckish Pick" as spelling the OS "Unix" "E-u-u-c-h-s".

His irreverence for traditional methods and approaches is only exceeded in his fervour by his devotion to the ongoing development of the operating system that bears his name.

Many new features have been added, which users may wish to incorporate into their applications, but none will be mandatory. Among these new features are:

■ Multiple ABS areas. Virtual

code for the Pick OS is contained

in the ABS area. Historically,

there was one ABS area per

system, but with this new scheme,

it will be easier to provide logical

partitions so that other operating systems (or multiple copies of Pick) may coexist on the same system.

■ Unlimited item size. Previously,

data items were limited to a maximum size of 32 Kbytes.

■ All frames are now 1K each. A frame is the means by which Pick addresses disc. In previous releases, frames for storage of data were each allocated 512 bytes, and ABS frames were either 512, 1,024 or 2,048 bytes, depending on the specific machine implementation.

■ This does not mean that each new implementation since 1980

method was 'old' code. On the

contrary, each licensee has been

given the right to make changes

to the system.

■ Subsequent releases will be called 1.1, 1.2, and so on. When a major change is made, it will be called 2.0.

■ Whatever the name, aficionados of the Pick OS have already learned that it provides an astonishingly high degree of application portability, both between new releases and even between different machines.

Lookalikes have been announced on the IBM-PC. The first of these was Revelation, from Cosmos of Seattle, Washington. The second came from CDI Information Systems of Bellevue, Washington, the licensees for Pick on the IBM Series/3.

While neither of these products is claimed to be an exact replica of Pick, both offer products that have a moderate degree of similarity, especially in the area of their respective Basic programming languages and Access-like command structures.

For this reason, it is very likely that Pick will provide a means by which applications and data can be transmitted over asynchronous lines.

Clearly, the Pick OS is a system whose time has come. Pick was user-friendly before the term became popular.

With the introduction of this powerful system on the IBM-XT, Pick Systems might jump off the springboard from its relative obscurity to become a formidable contender in the database management system marketplace.

Jonathan E. Sisk is president of JES & Associates, an Irvine, California, based firm specialising in services for the Pick operating system. He is author and publisher of *The Pick and the Reality pocket guide*.

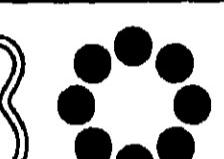

applications will port straight across without conversion. Since most Pick-based systems use 3½in magnetic tape as back-up media, a potential media incompatibility exists for users wishing to migrate to the XT.

For this reason, it is very likely that Pick will provide a means by which applications and data can be transmitted over asynchronous lines.

Mainframe package vendors face a personal challenge

Their task is to link personal computer applications to mainframe databases. How do they go about it?

WALSH . . . "Ability to access different databases is less vital or relevant to Peachpak II."

THE astonishing growth of the personal computer, claims Mark Bennett, manager of the Systems Software Division of RTZ Computer Services, has presented traditional vendors of mainframe package software with a new challenge.

The availability of local processing capabilities has highlighted a requirement for immediate access to the centralised corporate data on the mainframe databases," he says. "The challenge is how to provide that access in a meaningful and useful way."

The task is to link personal computer applications to mainframe databases. But the problem is that there are many applications on many different microcomputers, all needing to link to many databases on many mainframes. It could be called a problem of multiple many-to-many relationships.

Clearly there is no simple solution. The complete answer would be to design a new mainframe database with its own universal

The complete answer would be to design a new mainframe database with its own universal communications capabilities

communications capabilities to a new set of universal and integrated personal applications. But this is not likely. The project is too large, and it would still depend on the ability to persuade existing users to abandon existing databases and existing application programs.

There has to be a compromise, and it is in the area of compromise that most of the current solutions differ.

First, however, we should look at a statement of the requirements of a mainframe to microcomputer connection.

Bennett thinks these are fourfold. "Firstly, selectivity. This is the key to the micro connection in business situations, because working with too much data, if it doesn't overload the micro, is as meaningless in a business situation as working with too little data. The link needs to be designed to process only a personalised amount of data - the data needed to enable the right decision for each problem."

"Secondly, database access. Given the way most applications systems have been developed historically, it is unlikely that the data required on the manager's desk comes simply from one system. It is likely to be scattered across several files or databases. Some means of pulling this data together is required."

"Thirdly, security. The ability to access across several applications requires that strict security be applied to the lowest item of information on the files, especially if real time updating is to be performed."

"Finally, the results of the local processing should update the files in real time without some intermediate batch process."

Bennett's requirements for data base access and selectivity are met

BENNETT . . . "The challenge is how to provide that access in a meaningful and useful way."

in two of the PC Links methods of downloading data: selective and chained.

"Selective downloading," he continues, "depends on the built-in query function within Millenium - an English-like language with Boolean logic facilities. It uses an inverted list index which will allow any VSAM file to be accessed by the content of the record as well as the key."

"Chained download allows a set of stored queries to be executed in any desired order. This enables several different files or databases to be accessed in the same selection."

The Link's security is based on what within Millenium. "It is a user defined facility which can allow the real time configuration of access and update restrictions. Passwords protect the application, function, screen, field, search, value and logical query, and access can be further limited by time of day and day of week."

"The on-line interface for uploading," Bennett concludes, "is a file which the upload interface can map into normal CICS message format. Its mapping facility places the micro data in the correct fields in the mainframe message. Uploading is a real time

process. As a result, the revised information is immediately available for further downloads and revaluation."

One of the best known of the mainframe to microcomputer links is Executive Peachpak from Management Science of America (MSA).

MSA director Stuart Walsh explains how the system matches the requirements specified by Bennett: "The Peachlink communications software enables the user to select online any combination of individual fields from MSA's mainframe systems database and to transfer the current contents of those fields for a specified range of records directly to the personal computer in an on-line real time environment."

"No intermediary files are created, so the data extracted is taken directly from production files and the information is always the most up-to-date available, thus conforming to the real time selectivity criterion."

The ability to access different databases is less vital or relevant to Peachpak II since it is designed primarily for MSA proprietary databases. Security, however, is handled at both mainframe and microcomputer levels."

SOFTWARE MONTH

Double luck provided answer

Two coincidences gave rise to the VisiAnswer PC-database link

INFORMATICS General Corporation, one of the giants of the software world, which historically has specialised in 370 architecture on IBM mainframes, has now added the PC to its repertoire.

The move started about five years ago, before the PC had arrived, but at the height of the rise of the micro, Kaiyo Shroff, the company's marketing manager, explains that at the time the company realised the microcomputer had come to stay, and that the market would specifically need a way to link the micro to the mainframe.

Informatics started by buying an Otel microcomputer and developing methods of linking it to the mainframe.

About two years ago it was realised this was a mistake, but at the same time the first of many happy coincidences occurred - IBM launched its own PC, and forced new standards and maturity on to a previously fragmented microcomputer market.

Overnight (almost) software vendors were given the sort of microcomputer prospect pool that had not been seen since the heyday of CP/M-80's eight-bit domination.

The arrival of the PC came at exactly the right time for Informatics: lessons had been learnt on the Otel, but irreversible steps had not yet been taken. One of the lessons had come from a reappraisal of the needs of the PC user - who is not the traditional 370 user with whom mainframe software vendors are familiar. The 370 user wants reports, or, as Shroff puts it, "he wants financial or industrial archaeology - information on and from the past."

The PC user also wants information, but information from which to predict the future. "The PC user is an executive skill worker who wants to work in planning mode. PC user-friendliness is completely different from 370 user-friendliness, as we knew we had new lessons to learn," says Shroff.

At that time Merritt Lutz, group vice-president, Software Products Group, began to look for an association with a micro software specialist.

And then came the second great coincidence. At the same time Dan Fylstra, of VisiCorp, having travelled the same route in reverse, had begun to look for an association with a mainframe software specialist. It is from this association that VisiAnswer was born.

"Each side," says Shroff, "learnt from the other. VisiCorp knew how to interface with the naive executive user, and we knew how to interface to the mainframe production database. The result is VisiAnswer."

There is one more great coincidence in the history of VisiAnswer, one that is embodied in its name: VisiAnswer is a contraction of two names: VisiCalc from VisiCorp, and Answer/DB from Informatics.

Answer/DB sits on the main-

LUTZ . . . Wanted specialist.

FYLSTRA . . . Was looking for an association with a mainframe software specialist.

frame and is able to interrogate almost any standard 370 architecture compatible database, including IDMS, Adabas, Total, IMS, DL/I, and so on. By interfacing VisiAnswer to Answer/DB, Informatics was able to link the PC to a variety of different databases at a single stroke. So it immediately fulfils two of the four criteria laid down by Informatics for the product. "It is," Shroff says, "both universal and selective. It is universal at the mainframe end (in that it interfaces to all databases) and selective at the PC end (since the user can select precisely that information he wants). It is not just a file dumper."

The other two criteria include a native interface (gained courtesy of VisiCorp), and absolute security.

There are two aspects to database security: sensitive information must not be available to those unauthorised to see it, and the en-

vironment must be protected against accidental or malicious corruption.

VisiAnswer has two main protective devices. The first is that it is simply a no-update system. Live data may be drawn from the database and processed on the PC, but it may not be returned to the database.

"The PC user is an executive skill worker who wants to work in planning mode"

So far,

Doctors and lawyers, accountants and salespeople, stockbrokers and students, big businesses and small are all managing their data better with dBEST. All over the country, around the world, users have found that dBEST is the best solution to all their information needs.

Knowledge is power.

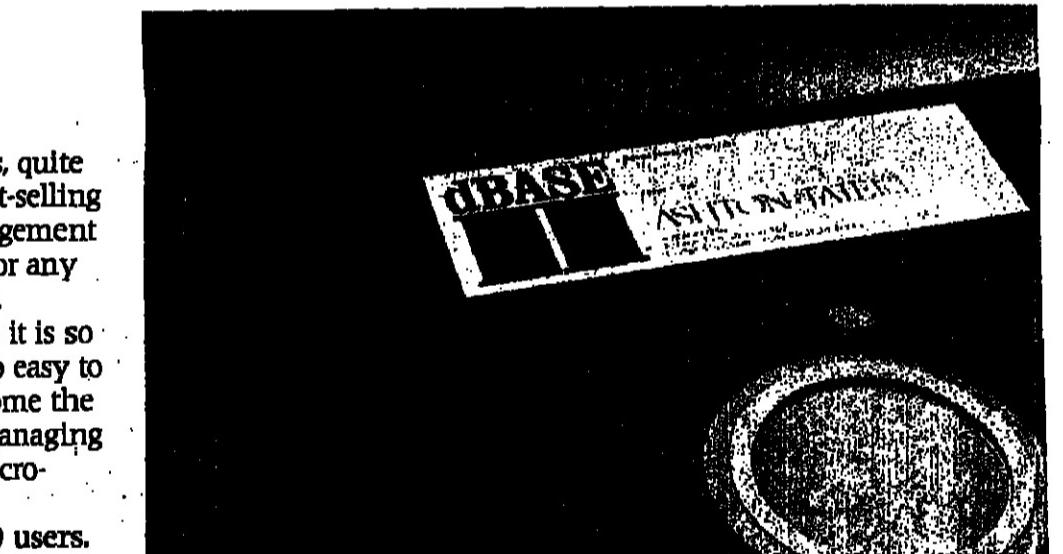

With dBEST, you can quickly and easily create a full business information system that does exactly what you need done. A system that will handle today's problems yet grow with you.

All of your data is at your fingertips with dBEST. Using simple English-like commands, you add, delete, edit, display, print and manipulate your information.

Once you've decided on what you want done, you save the instructions so that even your least experienced personnel can perform the most complex business functions with two words: Do, Invoices, Do Payroll, Do anything that needs to be done.

A question and answer sequence guides the executive through the process, at all times stating what has been done, explaining what can be done and prompting for what should be done. And if it isn't enough, PC quality help files are also available.

A dBEST User Group has been formed. For further details contact User Group Secretariat Caroline Tanner on 0908 568866.

A legend in its own time.

Already, books have been written about it. Hundreds of independent businesses are based on it. And other microcomputer programs measure themselves against dBEST II.

To see why, visit your nearest computer dealer and ask for a demonstration. Then take a package home and use it for 30 days. If it's not everything we said it was, return it and get your money back.

But we think you'll keep it.

Can over 150,000 users be wrong?

For the name of your nearest dBEST II dealer, contact Ashton-Tate (UK) Limited, Cofferidge Close, Stony Stratford, MK11 1BY. Telephone: 0908 568866.

ASHTON-TATE

dBEST II is a registered trademark of Ashton-Tate.

TAYLOR... "Links must operate on both personal computers and in mainframe environments."

How IBM has brought micro respectability

Like it or not, IBM's PC has changed microcomputing

WHETHER you like the company or not you cannot ignore IBM, for the IBM-PC is changing the face and structure of microcomputing. The hardware is already technologically dated, but it has done more for the microcomputer market than any other product, hardware or software, since CP/M/80.

It has brought respectability to the market; it has given the major and senior mainframe software vendors a sufficiently large and

sizable target to justify sophisticated software. And this software, in the form of mainframe to micro links, is drawing the microcomputer, grandchild of the mainframe, up into the adult world of serious computing.

With one or two exceptions, the vast majority of mainframe to microcomputer links are IBM database to IBM-PC links.

But within this conformity there are many different levels of solution, albeit largely with one basic similarity: the majority of solutions depend on some form of interpreter, whether it is primarily hardware or software or both, that sits between the PC and the mainframe and translates the required format of one to the required format of the other. It is the complexity of this intermediate interpreter that defines the extent of the solution.

At its simplest level it is little more than a protocol emulator, allowing the PC to "talk" to the

file server with all the major communications protocols. But, since it can support up to 2,000 Mbytes of its own Winchester storage, can run its own word and data processing applications, it can be used to bind together a corporate DP structure diversified by the past acquisition of a long number of different mainframe and large minicomputer systems.

A different approach to the micro/mainframe problem is at a level somewhere between simple 3270 emulation with basic file transfer, and the true software links inherent to packages like VisiAnswer, Peachip and others. An example here is the Host Interface Manager developed by IMI Computing, the computing arm of the IMI industrial manufacturing group. This package is basically a file transfer system (bi-directional), but it also enables the central DP department to customise and simplify PC access to the

mainframe, and perhaps even to send and receive whole files.

As the interpreter gets more complicated, it could become a box that can send and receive files from many different types of personal computers and send or receive them to or from many different types of mainframe. But at this level it is still primarily a protocol emulator.

Basically comprising its own programming language, it is able to present the PC user with a menu of the available options, whether they are PC resident or mainframe resident, and to perform the relevant logging-on and software loading requirements that are necessary for each different menu specification.

These links must operate on both personal computers and in mainframe environments and should facilitate the transfer of information from corporate databases to personal computers and back again. They need to be powerful enough to accommodate the far-reaching demands of users throughout the corporation and they must also be flexible enough to adapt to needs that differ from one department to another, and even from one user to another.

Towards the end of 1984 or early 1985 we shall release our Interactive File and Record Transfer (IFX) facility. This will provide users with the kind of file transfer facilities already existing between proprietary products within DECnet and PrimeNet. The difference is that it will allow file transfer across dissimilar machines.

"For the moment, however,

days of data item update across dissimilar operating systems and machines, both locally and remo-

tely, are still a long way off."

If the problem is to transfer data quickly, easily and securely between the PC and the mainframe, then one obvious solution is to design a software package that does everything for you, and provides a bridge between existing mainframe databases and existing microcomputer applications. But another obvious solution is to design a new and integrated package to deal with data on both the mainframe and PC simultaneously. This would clearly be an expensive

endeavour.

"This facility is available to

users of IFPS and IFPS/Personal. IFPS/Personal models can be solved by mainframe IFPS, and mainframe access to the models and data on the mainframe while allowing each user of IFPS/Personal complete flexibility to interrogate and change the assumptions in the models on the PC. The corporate planner can consolidate the individual user's model with the mainframe IFPS and distribute access to all users of IFPS/Personal.

This would clearly be an expensive

endeavour.

"The applications problem is much more intractable, and one that will fully be solved only by an internationally agreed standards solution"

process, but one that we can expect to see in the future.

Meantime, both Hoskyns and Cullinet have compromised by acquiring or developing an integrated set of micro packages (Keepit for Hoskyns, and the Cullinet PC Software); and developing a linking method to an existing mainframe database (Hoskyn's RAMS II from associates Mathematics, and Cullinet's IDMS/R Codasyl database).

Cullinet's CPCS is an integrated set of PC software tools (spreadsheet, text editing and for-

matting, graphics and relational

database) that can be linked to the mainframe IDMS/R via the Information Database (IDB). This is a mainframe package that serves a purpose conceptually similar to Informatics' AnswerDB/VisiAnswer.

One of the simplest software

links can be made where a package has already been implemented in both micro and mainframe formats. If the two systems are truly file compatible, then the link need be little more than a file transfer utility. Software where this is possible would include some of the major financial modelling systems like Final from D. M. England and Partners, the Wizard range from Comshare, and Final from Corporate Modelling Consultants.

Another example is IFPS from Package Programs Ltd. Red Tey

FASCIA 34. Equally as successfully and effectively as FASCIA

management, it caters for all aspects of on-line asset

and effective financial computer systems in the UK.

We've achieved wide-ranging success with many top

national and international corporations, and in the public sector through our constant commitment to present and future needs.

Comprehensive training by our application specialists gives a complete understanding of how our software works for you.

Our continual after sales product development ensures that your financial management stays ahead of changing trends.

The RTZ Computer Software range comprises:

General Ledger

G/L PLUS. Extremely versatile and extensive, yet simple

to use. The reporting facilities accommodate any reporting requirement very effectively, providing timely and accurate control and investigative information.

Its advanced system design features a unique translator

that allows other sub-systems to communicate directly to the ledger. Its flexible report writers include a planning and

forecasting module which gives you total control over your financial affairs, now and in the future.

Fixed Assets Mainframe, and System 34.

FASCA, the most successful and widely used Fixed Assets

Management System in the UK, its great strength being that it conforms totally to the latest inflation accounting standards.

FASCIA is used today by an ever widening range of

management personnel, including accountants, engineers, maintenance managers and stock controllers.

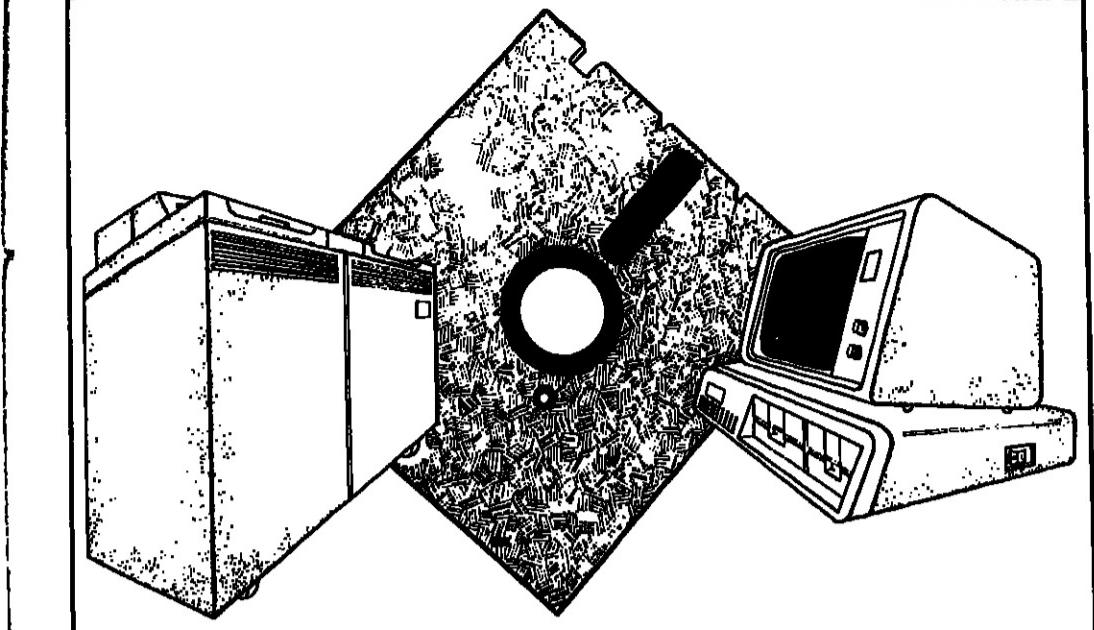

For further information on how to take the pressure off your accountants, contact:

SOFTWARE MONTH

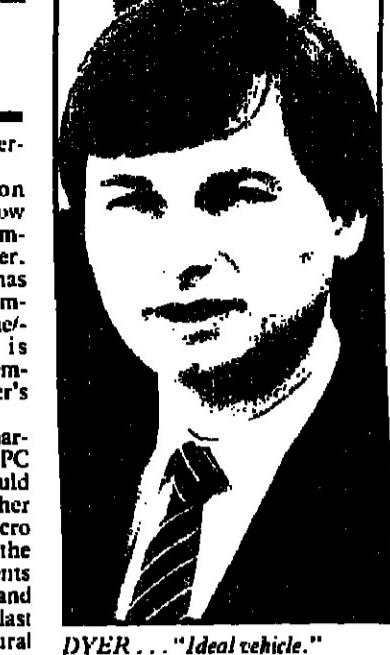

"The effective link of PCs to a mainframe cannot be provided by file transfer software and terminal emulation hardware/software"

tain either physical data or real time logical views of the production data.

Philip Dyer, technical director of Cullinet, comments: "The effective link of PCs to a mainframe cannot be provided simply by file transfer software and terminal emulation hardware software. The Cullinet Information Database used in conjunction with Cullinet's PC software provides an intelligent and transparent link between the mainframe, where data security and integrity are easily controlled, and a PC, where the power to drive end-user type tools is readily available."

"The mainframe provides an ideal vehicle to store end-users' information which has been created on a PC. With Cullinet's Information Database this storage is protected by standard security and back-up routines - which is a much better solution than trying to copy 10 megabytes to floppy discs."

"By using Information Database, information that has been created on a PC can be held on a mainframe and also be available for other authorised PC users. But more importantly this information can also form part of the company's database and subsequently

DYER... "Ideal vehicle."

end-users can enjoy micro-to-mainframe facilities.

"For the software developers we will provide tools that allow the programmers to work on a microcomputer rather than on a mainframe. These, unlike the mainframe, are naturally interactive, providing an excellent program development environment."

IBM brings respectability

From page 26

As a provider of mainframe information, IDB is used to contain "objects" (units of information within IDB) that actively derive their data from the production database. These are designed by the DP department to the PC user's specification, and can con-

tain either physical data or real

time logical views of the production data.

"The Cullinet Information Database allows a controlled flow

of information to - and very im-

portantly from - the PC user.

Data collected by PC users has

already been paid for by the com-

pany. Using Cullinet mainframe-

micro software this data is

available for use by other em-

ployees subject only to the user's

authority."

By the concentration of mar-

eting effort on the corporate PC as

an executive workstation should

not be allowed to hide all the other

uses of the microcomputer. Micro

Focus, a UK company much in the

news recently with announcements

of increasing profitability and

hints at future acquisitions, last

year moved out of London to rural

Berkshire, and in the process

installed something like 14 kilo-

metres of communications cabling

in its new offices, with the avowed

intention of putting a networked

IBM-PC on every employee's

desk.

Peter Hewitt, the company's

marketing manager, explains the

rationale: "The scenario we en-

visage, is one in which both soft-

ware developers and application

HOW TO CATCH UP ON CAD BEFORE IT CATCHES UP ON YOU

CAD '84

April 3-5, 1984 Brighton Metropole

Open 10am-6pm daily 10am-5pm on final day

If you're involved in draughting, design, manufacturing engineering, graphics, or using a computer, a visit to CAD '84 is just important - it's essential!

For here, all under one roof, you'll find out everything you need to know about computer-aided design.

How far it has come. Where it is going. What impact it will have on your business. And even your job.

CAD '84 is the sixth exhibition in the highly successful series. And it's going to be the biggest ever.

You will be able to see and use the products and find out how CAD is being integrated into total manufacturing systems.

CAD/CAM is one of the most important areas of the new technology. Make sure you keep ahead of what's happening.

For entry to the exhibition complete and present the following complimentary registration ticket.

YOUR COMPLIMENTARY REGISTRATION TICKET

This ticket will save you £2.00

on entry to CAD '84.

Where to get the tools to form the links

The following survey of software tools to link personal computers to mainframes covers most known products - but should not be regarded as exhaustive:

ADP Network Services

179/193 Gt Portland St
London WIN 5FD
Tel: 01-388 1912
Product: Datapath
Mainframe: DEC 10, DEC 20
Software: TSAM, Screen, Fastock
Micro: IBM-PC, XT
Software: Lotus 1-2-3

Software to software: yes
Mainframe updates: yes
Product: ADP Remote
Mainframe: DEC 10, DEC 20
Software: IPL, Ingres
Micro: IBM-PC, Rain, and anything supporting C
Software: Debas (screen formatting and data capture)
Software to software: yes
Mainframe updates: yes

Stanmore, Middx HA7 4DU
Tel: 01-954 7333
Product: Cullinet PC Software
Mainframe: IBM
Software: IDMS/R+Information Database
Micro: IBM-PC
Software: PC-DOS
Software to software: yes
Mainframe updates: yes

Not that kind of link, Smith!

Wokingham, Berks RG11 2PQ
Tel: (0734) 793131
Product: Hinet
Mainframe: IBM, ICL, HP, CMC etc

Digital Microsystems
Molly Millars Bridge
Molly Millars Lane

Software: ICL, IBM
Software to software: yes
Mainframe updates: no

Maidenhead SL6 1SA
Tel: (0628) 39242
Product: Executive Peachpak II
Mainframe: IBM
Software: all commonly used database management systems

Micro: IBM-PC, XT
Software: All Peachtree, plus 1-2-3, VisiCalc, dBaseII, and DIF files

Software to software: yes
Mainframe updates: yes

Hoskyns Group
64-78 Kingsway
London WC2
Tel: 01-242 1951
Product: ITS Series
Mainframe: IBM
Software: almost any, particularly Ramis II

Micro: Now IBM-PC, XT. Soon HP 150, Wang, Digital

Software: ITS Series, plus a number of 3rd party standards

Management Science of America

MSA House

Coden Road

"It's a lovely fit, Sir..."

How many times have you been faced with packaged software that promises a lot and delivers little more than aggro?

Particularly when it comes to choosing management application software that will fit comfortably into your existing environment.

Happily, at Peterborough Software we can state with some confidence that our human resource management products - Unipersonnel, Unipay and Unipension - will suit most D.P. people down to the ground.

Our products are unashamedly packaged software.

So how can we be so confident?

Firstly, we've chosen to specialise. Unipersonnel, Unipay and Unipension are designed for IBM mainframe users.

Which immediately means that our software doesn't have to try to be all things to all men.

We've also chosen to specialise in our application areas. We're in the business of human resource management. So because we're specialists you'll find that your colleagues in the personnel, payroll

and pension departments will have their needs more than adequately met.

And of course from a DP point of view, our application specialisation means that you're not using software designed for one range of tasks to do things it was never intended for.

Secondly, our confidence stems from a wealth of experience. We've been in this business for over twenty years, making us one of the longest-standing software specialists around.

Perhaps most importantly of all, our rental-only policy commits us to continuous relationships with our customers.

So if there's a problem (and let's face it, any software will sometimes hiccups), our Customer Support Team are only a phone call away with a troubleshooting, problem-solving service for you.

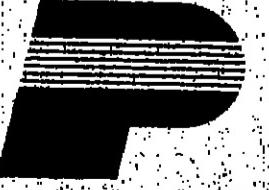

Please tell me more about Unipersonnel Unipay Unipension

PETERBOROUGH

Life emerges from the Silicon Fen

Peterborough is rapidly becoming a high tech town. Nuala Moran went there to see why it is such fertile ground for computer firms

WE'VE all heard of Silicon Valley, and latterly of Silicon Glen. The latest contender in the silicon stakes is Silicon Fen — otherwise known as Peterborough.

This appellation was coined by the managing director of one of the companies which started life in the area. A look at what's happening in the computer industry does seem to indicate that Peterborough is approaching that "critical mass" situation, where companies get drawn into the town because other companies are there and people are interacting to spawn new ideas and new companies.

But it's still a long way from the stage where everybody's anybody has to be there.

In a sense Peterborough has grown of necessity. It was designated a new town in 1967 and the Peterborough Development Corporation was set up in 1968 with the brief to expand the town's population from 81,000 to 147,000.

This is done by developing the infrastructure. The corporations provided houses, offices, factories, schools, roads and leisure

The number of jobs has gone up during a time when many parts have seen unemployment rise

activities. And it went out and persuaded companies to move into the area.

There are a lot of statistics to illustrate exactly what the corporation has done. Perhaps the most telling is that the number of jobs in the town has gone from 45,500 in 1967 to 67,650 now, during a time when many parts of the country have seen unemployment rise and rise.

This begins to make it sound as if there was no life before the Peterborough Development Corporation. In fact Peterborough already boasted two significant computer companies, Peterborough Software and Geest Computer Services.

It also had several large engineering firms which have been transformed by the application of computer technology. One of them, Baker Perkins, has a Department of Trade and Industry-sponsored CAD/CAM awareness centre and another has indirectly spawned a recent high tech start-up.

The development corporation takes credit for enticing some big computer users into the area. Large installations include those at the British Sugar Corporation, Thomas Cook, the Trustee Savings Bank, Pearl Assurance, and the latest "acquisition", Lloyd's Life Assurance.

Explaining his choice of Peterborough, David Whitney, Lloyds Life Assurance management services manager, says: "We've looked at moving from the City, number of times, and realised it was likely to be desirable at some stage, purely for cost reasons. When the decision was finally made, we gave instructions to agents that we wanted to relocate within a certain distance of London, and set the costs we were prepared to pay."

"It turned out that Peterborough had the right office at the right price. At the level of taking the decision on where to go, we were just looking at fundamental cost. Having made the decision, we do realise that Peter-

rough has other attractions. "For instance, an advert in the local paper for computer staff brought in 200 replies. From this we will offer nine or 10 jobs, which is a considerable return on one ad."

"And we found that most of our senior people are prepared to relocate." There will be about 200 staff to start off, but there is space for about 380.

"Moving to Peterborough," Whitney continues, "probably won't save us that much on computer staff salaries, but it certainly will on clerical staff. If we'd just moved to the edge of London, we wouldn't have made those savings on salaries, and the M4 corridor is too expensive for offices."

"Other areas in the South-east are very expensive for housing, so it would have been difficult to get our staff to move."

It has now always been so easy to

get computer staff to go to Peterborough. When Thomas Cook went there in 1975 it lost all

"But having said that, the facilities in the town do make it easier for us." Thomas Cook has about 120 DP staff.

"The growing number of installations in Peterborough means there is quite a good labour pool, though it works both ways, because we lose people as well. But I think it's good that other companies are coming in; it's healthy for us all."

"Our staff turnover has never gone up unduly, but it would be wrong if there wasn't a turnover."

Warren is himself a proof of the Silicon Fen argument. He is part of the "old guard" of the Peterborough computer industry. He was born and bred in Peterborough and moved into the travel business when Thomas Cook moved into the town. Before that he was with one of the established Peterborough computing concerns, Geest

The company moved to Peterborough in 1972 for two reasons. Director Les O'Reilly

says:

"Most of our customers were in Peterborough anyway and the Peterborough Development Corporation underway we foresaw a growth in the market."

While Peterborough did turn out to be a good area for business, the growth aspect worked both ways. "Whenever a new company comes to the area, you get a tremendous ripple. This is because it's new and can offer London rates. I suppose most firms in the area suffer from rippling effects," says O'Reilly.

"We have lost some staff, but we have also come to accept this will happen."

"On the other hand, the type of people we employ at Geest need to have wide experience, so new companies bringing new people into the area can also work to our advantage."

Geest is now furthering the development of Peterborough's computer segment with a move to micros. The company is opening a business micro retail store in the town later this month.

The shop is the brainchild of Phillip Wainwright, managing director of Geest. "There isn't a micro shop for business users anywhere in the area, so I think the market is there," he says.

"For the past two to three years people have been talking about micros as if they will satisfy every business need, they've been oversold tremendously. The reason why it now seems to be a good time to get into micros is that there's some sense coming back to the marketplace and the hype is being checked."

"Everyone is realising that although the hardware is cheap, you do have to consider maintenance and training and such like things. That's the area Geest will go for, as we won't necessarily be the cheapest in the market."

Wainwright emphasises that going into micros doesn't mean Geest is deserting the bureau business. "Really the main aim is to sell micros to link back to the bureau and use the shop as a way of getting business."

"In fact, we've been selling standalone micros since last year and we've sold 70-80 from our existing office. But it's not ideal, because we qualify our customers

While older companies may eschew the Peterborough effect, some of the new ones are enthusiastic

by the problem they have finding us."

Having a town centre site should mean that customers just drop in. "After all," says Wainwright, "two or three visits from a salesman and you're probably wiped out any profits you might have made."

"I think the shop will be a focus for computing supplies for 3-4

■ Continued opposite

WAINRIGHT . . . "The hype is being checked."

PETERBOROUGH

Peterborough pulls in the businesses

From page 30

miles radius, and there are 20,000 businesses in that area."

The sort of skills we're after are scarce, but people come to work here because of the type of jobs we offer, not because of Peterborough."

While the older and more established companies may eschew the Peterborough effect, some of the new ones are frankly enthusiastic about it. One company that demonstrates how things can rub off is Tourism Technology Limited.

There is one computer company in the town that goes back further than Geest Computer Services, one where Wainwright himself worked in its early days. Peterborough Software has been around for about 20 years and, as managing director John Mills points out,

Germany and recognised that the UK market in local area networks was just about to take off.

"I came to Peterborough because I didn't have that much money and I was stunned at the cheapness of houses," he says.

"We're now moving into manufacturing, and our first product, an advanced broadband modem for point-to-point applications, will be available soon from Network Technology, the distributor.

"We've subcontracted the making of the board to a local firm. There was no choice of subcontractor as there would have been in the M4 corridor, but then it was half the price."

There is now quite a mix of different computer companies and users in Peterborough.

Tourism Technology was set up to develop Modulus, an office management system for travel agents. "My immediate thought when I was asked to do it was to go back to London because the various parties involved were based there. But the choice was up to me and I decided Peterborough would be cheaper."

Adams started off in two rooms in an office block built by the Peterborough Development Corporation and has expanded to five. The original staff complement was three and this is expected to reach nine by April.

Integrated Vision is another of the companies which have started up in the area, set up by someone from another Peterborough firm.

The company specialises in manpower packages. It is a market leader in its field and its customers tend to be of the large variety.

At the moment Peterborough Software has its offices spread over three sites. It has just been given planning permission for £3 million worth of new offices in the grounds of Thorpe Hall, a Cromwellian mansion in the area.

Mills says: "What we are aiming at is to establish our own identity in our own place. Work will start this April and we expect to move in at the beginning of 1986."

"The building will be exclusive, in a nice area, but only five minutes from the town. The premises will show us as a significant force in our industry. They will also provide a better environment for us to work in."

Mills does not think that Peterborough's new town status has contributed to the success of its namesake. "We've grown because of growth in the computer industry, not because of the Peterborough Development Corporation. There's no factor in our success which I would attribute to being in Peterborough."

Wainwright emphasises that going into micros doesn't mean Geest is deserting the bureau business. "Really the main aim is to sell micros to link back to the bureau and use the shop as a way of getting business."

"In fact, we've been selling standalone micros since last year and we've sold 70-80 from our existing office. But it's not ideal, because we qualify our customers

THE PROGRAMMING STORY BEHIND THE FRONT PAGE NEWS

The news is all from Morgan-Grampian plc., a major publishing house responsible for 50 important titles, many of them required reading for people concerned with the advances of high technology in business and industry.

With the installation of a large new IBM system 38 configuration at our Head Office in Woolwich by leased line to an IBM 3083 connected at Croydon, we're now ready to take on the exceptionally bright, people-orientated Programmers who will write the synopsis for our future growth — in RPG and COBOL — and do much more besides. There will be opportunities for writing systems using micros, minicomputers and mainframe in a multi site environment.

IBM 38 experience is not a requirement — we can provide all the training you'll need to use our advanced equipment to develop — then expand — a complete range of software systems. Everything to support exciting developments.

What we want from you

(8338)

is a minimum of 2-3 years' good programming experience and ability to liaise well with people in every area of our business from editorial chairs to finance and media sales.

Later, it could be possible for you to move out into these departments in a key interface role. So you'll need to be the kind of communicator who can bring about a clear understanding of computer systems amongst non-computing people.

If that's the sort of challenge you're equipped to take on, you can expect a starting salary up to £10K, a superb range of benefits and a lively and companionable environment — our staff club amenities include a restaurant and bar. We're also conveniently located close to Woolwich BR station and an excellent shopping centre.

Now for your programming story — everything you've done up to date. Send it to: Personnel Officer, Morgan-Grampian plc., 30 Calderwood Street, London, SE18 6QH. Tel. 01-855 7777.

Systems Development — Broad-based challenge in a commercial environment

FULHAM

At British Gas London Computing Centre we are working on a challenging range of projects, developing systems to cover wide areas of our business: Major Project Scheduling, Stock Control, Engineering, Management, Finance and Accounting, Large Contracts and Personnel. We are now looking for DP people to join our professional team in Fulham.

Analyst Programmers up to £13,452

With the ability to develop programmes through all stages, analysis, design, programme development and system implementation. Background: at least 3 years in a mainframe commercial environment, and practical experience in COBOL and mainframe job control language. Ref EP/7640 [147].

Programmers up to £10,520

With at least 15 months experience, including use of COBOL, job control language, structured programming and either ICL 2900 VME or large IBM. Ref EP/01216 [147].

The tools of our trade? We work on an ICL 2900 VME using structured techniques, COBOL and programmer productivity tools. There's a Univac 1100/61 on site plus access to a large IBM mainframe. The use of database is well-established and we are now moving into networking and distributed processing. We operate under ROSCOE and RPF procedures, with MVS and JES2. Training will be given where necessary.

Please write with full personal and career details, quoting the appropriate reference number to: Assistant Personnel Manager [HQ Services], British Gas Corporation, 59 Bryanston Street, London W1A 2AZ.

BRITISH GAS

Head of MVS Systems Support

The Rutherford Appleton Laboratory, part of the Science and Engineering Research Council, supports scientific researchers in universities and polytechnics throughout the UK. The Computing Division provides large scale computing services and coordinates computing research programmes. There is a large IBM-compatible mainframe complex, and a large number of distributed computers.

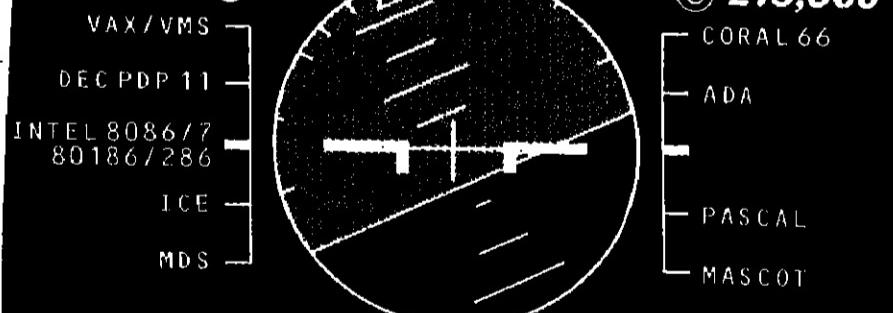

There is a vacancy for a head of MVS support, who will take responsibility for maintenance of MVS/JES3 operating systems both on the scientific (IBM 3081 and 1011, Amdahl 10) and administrative (IBM 3032) systems. This will involve applying updates, solving problems, reporting bugs to the manufacturer, reconfiguring and tuning, establishing operational procedures, etc. The post is in Computer Services Group but there is a need for liaison with the users and development groups as required.

The post is at the following grade:
Senior Scientific Officer £8,970-£11,476 p.a.
Some assistance with expenses incurred in house sale/purchase may be available.
The laboratory is a friendly community with its own restaurant and sports facilities nearby.
Benefits include a local transport service, sick leave allowance and generous holidays.
Application forms from: Recruitment Office, Rutherford Appleton Laboratory, Science and Engineering Research Council, Chilton, Didcot, Oxon OX11 0QX. Tel: Abingdon (0235) 445435, quoting ref. VN 204.
Closing date: 5th April 1984

SERC Rutherford Appleton Laboratory

SOFTWARE ENGINEERS

West of England

What makes a Software Engineer so special?

Is it working on the latest technological development, or using creative ability to design successful and envied products, with future aircraft design.

We believe we have the answer to software engineers' dreams, with their need to utilise state-of-the-art design tools, and their desire for recognition.

You are a rare professional, and deserve a rare opportunity. We are working on intriguing new aerospace control and display systems for use in tomorrow's aircraft, and desire highly talented, creative and ambitious engineers.

Within a small stimulating team Suite 201-208 Albany House 324 Regent Street, London W1R 5AA.

environment, your excellence will be exploring and pioneering new design using your industrial experience and expertise.

Using primarily CORAL 66, Mascot, Pascal and possibly ADA, you will be developing systems incorporating Intel's range of micro's including the latest series 80186/286.

With consistently competitive salaries and one of the finest benefits packages available, including relocation, you can expect to target your career well into the future.

Please telephone Nicholas Marsh on 01-637 9617 or send your C.V. to:

MANAGEMENT & EXECUTIVE SELECTION

SOFTWARE LECTURERS SLOUGH/MAIDENHEAD AREA

Our client is a highly successful U.K. based manufacturer and supplier of computer systems, with a reputation for high quality products and an excellent back-up service.

As part of their ongoing service in their future they provide first class training for their employees, customers and students on Government schemes. They are about to take a major step forward in this programme by establishing a completely new training centre in their purpose-equipped offices.

Our client therefore wishes to appoint a number of lecturers who have expertise in one or more of the following areas:

- A thorough knowledge of COBOL (preferably on DEC based equipment).
- Systems Analysis and Design from Feasibility to Implementation.
- Structured Programming/Analysis.

Naturally you will be articulate, self-confident, and resourceful, and preferably have previous experience. Training in course design and trainer skills will be provided as necessary.

In return for your highly developed skills our client offers an attractive salary with company and departmental bonus schemes plus a range of usual big company benefits.

Our client wishes to make these appointments without delay so please write with full C.V. as soon as possible to Mr. G Green.

Nightingale Executive

103 The Parade, Slough, Berkshire M27 2BD
Complaints to which you do not wish your application to be forwarded should be listed in a covering letter.

Analyst/Programmers

- * 3 years + PL1 with TSO/SPF
- * IMS and ADF is essential

Systems Programmers

4 years + supporting MVS/ES2 and/or IMS/VS, TSO internals, VTAM, SNA design and MVS structure and design.

IBM Programmers

- * PL1, Fortran
- * Mark IV (an advantage)
- * Scientific applications (an advantage)

Training Instructors

- * PL1 and/or Fortran
- * VM/CMS and/or TSO/SPF

Analyst/Programmers

To convert mainframe applications to run on a personnel computer hardware.

- * PL1, MVS JCL, EXTENDED SPF, MARK IV
- * Micro networking experience (UNIX an advantage)

Systems Analysts/Systems Programmers

Candidates should either have a B.Sc Engineering qualification with at least 4 years DP experience or 7 years related job experience with 2 years as an Analyst. Experience in PL1 programming is essential and ISPF is preferred with sound knowledge of some of the following:

- * SPF, OS, JCL, TSO, Project Development Methodology, Panvalet Program Management, IBM Utilities, Flow Charting - Data Flow Diagrams, ISPF Dialogue Manager, Structured Programming Techniques, Documentation Writing.
- * The ability to liaise with users to define maintenance and development projects through to implementation with minimal supervision is essential.

LOOK TO THE FUTURE... ...IN COVENT GARDEN

***IBM 3083**

*** To £13,500 + Generous Benefits Package**

We are leaders in the field of providing finance for the domestic and business markets. Computer systems are absolutely essential to the daily operation of our business. We have two large IBM mainframe sites - 4341s and shortly a 3083 - connected by interactive communication links. A Tandem system supports a countrywide network of more than 400 terminals in over 100 branch offices.

We are now at the early stages of an all embracing development programme requiring approximately 200 man years work. Our current plans include - redeveloping our principle business system using DL/1; increasing the facilities provided for our branch office system; and building new systems using CICS and DL/1.

What will your future hold with us? For a start you will be working with the very latest hardware and software technology from IBM and Tandem. We will provide you with every opportunity for career progression leading to systems analysis. Combined with this will be a personal training plan designed to give you the 'tools' to do your job properly. Our development teams are recruiting as follows:

IBM Programmers

For these positions you will need two to three years' IBM COBOL experience. If you have MVS, CICS or DL/1 experience already, so much the better.

You will be working in a productive environment as nearly every desk has its own terminal.

Our location is easily accessible from virtually all mainline stations and the underground system. Company benefits include a six month salary review, profit sharing, non-contributory pension scheme, health care plan, subsidised staff restaurant and, subject to qualifying conditions, an interest free season ticket loan and subsidised mortgage.

For a preliminary discussion about your future with us, please telephone our Advising Consultant, Stephen Brown, on the SCR London office telephone number below or 04024 72610 evenings and weekends. Alternatively submit a detailed C.V. to him at the SCR London office.

Tandem Programmers

From Junior to Senior levels we need COBOL Programmers with one or more years' experience. At a Senior level you will need Tandem experience as well as supervisory and design skills.

You will be working in a productive environment as nearly every desk has its own terminal.

Our location is easily accessible from virtually all mainline stations and the underground system. Company benefits include a six month salary review, profit sharing, non-contributory pension scheme, health care plan, subsidised staff restaurant and, subject to qualifying conditions, an interest free season ticket loan and subsidised mortgage.

Real-Time Software CAREER OPPORTUNITIES

NW England

£9K to £15K neg.

The advent of information technology has created the need for highly advanced communications and message processing systems dependent totally on the quality, sophistication and innovation of system software. The opportunity to contribute to the development of future generation systems is currently being offered by a major international force in communications technology in the building of a new specialist team. Current opportunities exist for:-

PROJECT LEADERS

Ref: - W/171

PROGRAMMERS

Ref: - W/173

SYSTEMS ANALYSTS

Ref: - W/172

The ideal candidates will be:-

- 23 to 40 years of age
- Qualified to BSc or equivalent
- Currently employed within a Real-Time software environment (either commercial or defence)
- Conversant with Block-structured high-level languages (eg. PASCAL, CORAL) and operating systems such as CONTEXT or RSX11

Some experience of Assembler on minis or micros would also be an advantage but training in all areas will be offered to successful candidates.

You will be involved in challenging work incorporating multi-processing and distributed processor systems in message processing, Command, Control and Information systems and packet switching. The software development will be on VAX 11/780, PDP/11's and 8086's.

The benefits include an excellent negotiable salary and working environment with a full relocation package for the successful candidates with the opportunity to become an integral part of a special team developing tomorrow's technology.

For an initial and confidential discussion please call Bob Archibald on Newbury (0635) 33445 quoting the appropriate reference number or write in strict confidence to:-

ARCHIBOLD RAE CONSULTANTS LIMITED,
(High Technology Search & Selection)
7, London Road, Newbury, Berkshire RG13 1JL.
Tel: Newbury (0635) 33445.

ARC

Plessey Microsystems Limited is destined for dramatic growth in the next 12 months. Add to this the impressive range of development work which we are doing in commercial and military fields, our outstanding profitability and the attractive location in which we operate and the advantages of developing a career here in Towcester, start to add up. What's more we're small enough with 400 employees, to enjoy a particularly friendly atmosphere. Our projects are technically and intellectually challenging and include magnetic bubble memories and a range of systems products such as memories, microprocessors and microcomputers. Advanced software includes UNIX.

We are now seeking to recruit suitably experienced and qualified men and women within the following areas:-

We will offer:-
A salary which reflects the high value we place on the skills we seek. In addition we will offer a range of benefits including life assurance, contributory pension scheme and family PUPA cover. A generous package for relocation is also available.

We are well served by motorway and rail connections from the South East and the Northamptonshire countryside is within a few miles drive. Local amenities such as schools, libraries and restaurants are good and housing is reasonably priced.

How to apply:-
Either telephone Mike (ext our Engineering Executive either between 8am and 6.30 pm on Towcester (0227) 70312 or on Brackley (0220) 773322 between 7pm and 9pm quoting the reference number which interests you. Or fill in the Click Response Coupon or send a fax quoting reference CWP/PO1 to John Lerner, Personnel Executive, Plessey Microsystems Limited, Water Lane, Towcester, Northamptonshire NN12 7UN.

SEVERE ENVIRONMENT SYSTEMS GROUP

Software Engineers to design/develop products based on 8086/80286 processors.

With experience/knowledge of the following:

- Logic design
- Intel processors, MDS, ICE and assemblers
- Serial communication interfaces
- General microprocessor knowledge
- Provision of data for product manufacture
- Assembly, PLM and ADA

Ref MS1

Experience/knowledge of the UNIX operating system is desirable, together with hardware appreciation.

Hardware Engineers to design and develop 80386-based products for VME.

Experience/knowledge of the Motorola 68000 processor and associated products is required.

Ref MS2

Component/Reliability Engineers to work on all aspects of component specification and procurement including MIL-STD-883, MIL-STD-202, MIL-STD-217.

With experience/knowledge of:

- VMS with Pascal or Fortran
- UNIX and RSX11
- Plessey and Scicon engineering workstations

Ref MS3

Software Engineers to design firmware for microprocessor controllers and to work on software aspects of integration with various host processors.

Experience/knowledge of TI9900/AMD2900/Fine 8086, 8088, 80386 processors is desirable.

Ref MS4

With experience/knowledge of:

- VMS with Pascal or Fortran
- UNIX and RSX11
- Plessey and Scicon engineering workstations

Ref MS5

Software Engineers to work on the development and integration of CAD systems, solving problems of software and hardware compatibility, provisioning and testing tools and enhancing software systems.

Senior Programmers

CROYDON

up to £12,800

Can YOU handle this creative role in one of Europe's foremost installations? Programming at SEGAS is no ordinary job - we work in project teams where there is considerable scope for you to exercise your creative skills in systems development.

Projects too are more satisfying - each one usually covers a major area of our business and is big enough to involve you, alongside the Systems Analysts, in various stages from start to finish, including program specification and user contact.

Our computer installation is one of the most advanced in Europe, being continually developed and updated to maximise our business efficiency. Currently we operate on an IBM 3081 and an AMDAHL 580/60 with a network of over 1400 VDUs, while software includes ROSCOE, structured COBOL, CICS, DL/1, DATA MANAGER, TSO, FOCUS, UFO, GENEROL, EASYTRIEVE and 8100 COBOL.

These positions, arising from internal promotions, require you to have at least 3 years relevant experience, preferably with a background of on-line and/or Database programming, and a keenness to further develop your technical and managerial potential.

Other benefits include: excellent working conditions, generous holidays, sick pay, pension and insurance schemes, sports and social facilities (including squash and tennis).

Applications in writing, giving full details of career and qualifications, to: Personnel Manager, South Eastern Gas, Segas House East, Katharine Street, Croydon CR9 1JU, quoting reference OR105. For further details, please ring Bell Everit on 01-688 4466, ext. 381.

SOUTH EASTERN GAS

Software Sales

Fee Software Products Ltd. is expanding and requires sales people to meet the increasing demand for its products.

Fee operates in the IBM DP marketplace and sells a range of highly successful software products including UFO, InterTest, Guardian and OMNILINK.

Applicants should be well versed in IBM systems, with sales experience and keen to meet the challenges presented by a fast expanding company. With prospects of rapid development within the company, a keen approach will count more than a lengthy sales track record.

The job includes a company car while salary plus commission for the successful salesman will more than meet the demands of today's high flyer.

COBOL PROGRAMMER

Feltham

Hertz are the pace setters in the car-leasing league and at our headquarters in Feltham we have the right opportunity for a young Programmer eager to join a dynamic company. You'll be writing new applications to support existing systems, working closely with the M.S.S. Manager. Aged 22-35, you'll need at least 3 years' experience, ideally gained on a Texas Instrument Mini-computer, and the ability to write test programmes. Any experience you have in programme specification would be an advantage in this role. With Hertz you can expect to earn around £10,000 p.a. plus all the benefits you would expect from an expanding company.

Please contact Barry Andrews, M.S.S. Manager, Hertz Car Leasing, North Feltham Trading Estate, Feltham, Middlesex, Telephone 01-781 6363 or 01-781 6261.

Our Client

Is the Treasury Division of a major international bank embarking on further extensive computerisation of their dealing operations, to take them to the forefront of technology in this area.

Specialists since 1971 in UK and International computer & technical appointments
OCC Computer Personnel
5 Hospital Street
NANTWICH
Cheshire
0270 627 206

For further discussion in complete confidence please telephone Tony Roberts on 0270 627206 daytime or 0270 624058 evenings and weekends, or write to him at the address across. Candidates' identity will not be made known to our client without prior approval.

The Positions

Call for innovative business analysts with a good financial accounting background ideally gained in a dealing or Foreign Exchange environment.

Candidates

Will be self starters with highly developed inter-personal skills capable of operating in a Project Leadership role. A minimum of three years relevant experience is called for, gained in a real time financial environment. Experience of multi-currency systems would be an asset.

Benefits

As well as salary and subsidised mortgage there is a highly attractive package embracing all the usual banking benefits.

SOCIAL & COMMUNITY PLANNING RESEARCH PROGRAMMER

SCPR, an independent social research institute require a programmer to join a small team concerned with the processing and analysis of data from a series of individual research studies, and with the development of a variety of related applications.

The institute has links to an external VAX computer running UNIX, but an increasing number of applications are being developed to run on in-house microcomputers.

A sound computer background, adaptability and the ability to communicate well with others are essential for the job. Experience in handling survey data would be a distinct advantage.

Salary in the range £7-10,000 according to experience and qualifications.

Please write or telephone to obtain further details and an application form to the Data Processing Director.

DATA COMMUNICATIONS

outstanding opportunities in sales and product marketing

To £30,000 + Car

Our client is one of the world's leading data communications manufacturers. They continue to forge ahead in all areas: sales up to 54%, acquisitions and new products announced last year, high investment in research and development. To meet growth for the new fiscal year, the company has the following outstanding opportunities.

PRODUCT MANAGERS c£30,000 + CAR

With an increasing emphasis on networking products in the UK, two skilled Product Managers are required for the two key product groups:

- * DATA PABX
- * MULTIPLEXOR PRODUCTS

You will assume full responsibility for pricing, strategic targeting of business sectors, promotional advertising activity and product planning.

Essentially, your background will be in a blue-chip marketing role and should also include strong technical/product awareness.

For further information, please contact Paul Child, on Windsor (0733) 56155 or write to him at: Kramer Westfield Associates Ltd., 23 Victoria Street, Windsor, Berks. SL4 1HE.

Recruitment Consultants to the Communications Industries.

COMMUNICATIONS

Communications is the fastest growing and most exciting sector of the computer industry. Our client is continually demonstrating its expertise in the implementation of voice response, viewdata and associated communications and network systems. This has led to an impressive list of major companies throughout the UK and Europe who have chosen our client's products as the best available for their needs.

Software Manager to £17,000

To maintain the excellence of our software we need a strong manager to control a small group of seven professionals and the development and implementation of communications based systems.

The following attributes are sought:

- Ability to communicate well with senior management and D.P. staff.
- Ability to motivate others and to lead by example.
- Experience of communications software development (ideally with some IBM Communications exposure).

In return you will have the opportunity to become totally involved and play a significant part in the company's ongoing success.

Sales Support Analyst to £15,000

High quality products necessitate high quality support. To maintain our client's reputation for excellence we are seeking a further support analyst with the following:

- Good interpersonal skills.
- Previous support experience advantageous.
- Experience of communications software (IBM, ICL, or X25 will be valuable).

Working in a small friendly and informal environment will ensure that endeavour and application are instantly recognised and subsequently rewarded.

USA Senior Software Development Specialists Permanent or Contract

We are seeking Senior and very Senior Software Development Specialists for our client in the USA.

These are very exciting career opportunities. Successful candidates will work on a fourth generation language and once familiar with it, are expected to have the ability to develop it further.

Experience of PL/I and/or Assembler would be ideal. However candidates with good logical and creative skills will also be considered.

In addition, we have an opportunity for a candidate with strong DL/I experience.

Our client is happy to accept people on a contract or permanent basis. Initial interviews will take place in the UK during the next two weeks. If you would like to be considered for these opportunities please send a comprehensive CV to Joan Lovejoy, Computer Search & Selection Limited, Hamilton House, Marlowes, Hemel Hempstead, Herts HP1 1BB, or for further information telephone 0442 40761.

CS + S Computer Search & Selection

European Support Specialist £17.5-£20K+car

Our client, an American based company, seeks a European Support Specialist. This is an exciting opportunity for someone with exceptional skills.

The job is to install a systems software package, tuning a fourth generation language and to support customers until they are familiar with the package. Currently the areas covered are UK, France, Germany, Scandinavia and Holland.

Candidates will probably come from a systems programming or systems engineering background and will have a minimum of 5 years' experience in operating systems. It is essential to have in-depth knowledge of MVS and experience of VM, IMS or IDMS is desirable.

The person we seek will have the ability to combine technical excellence, with an instinctive feel for systems work and an ability to communicate effectively with customers.

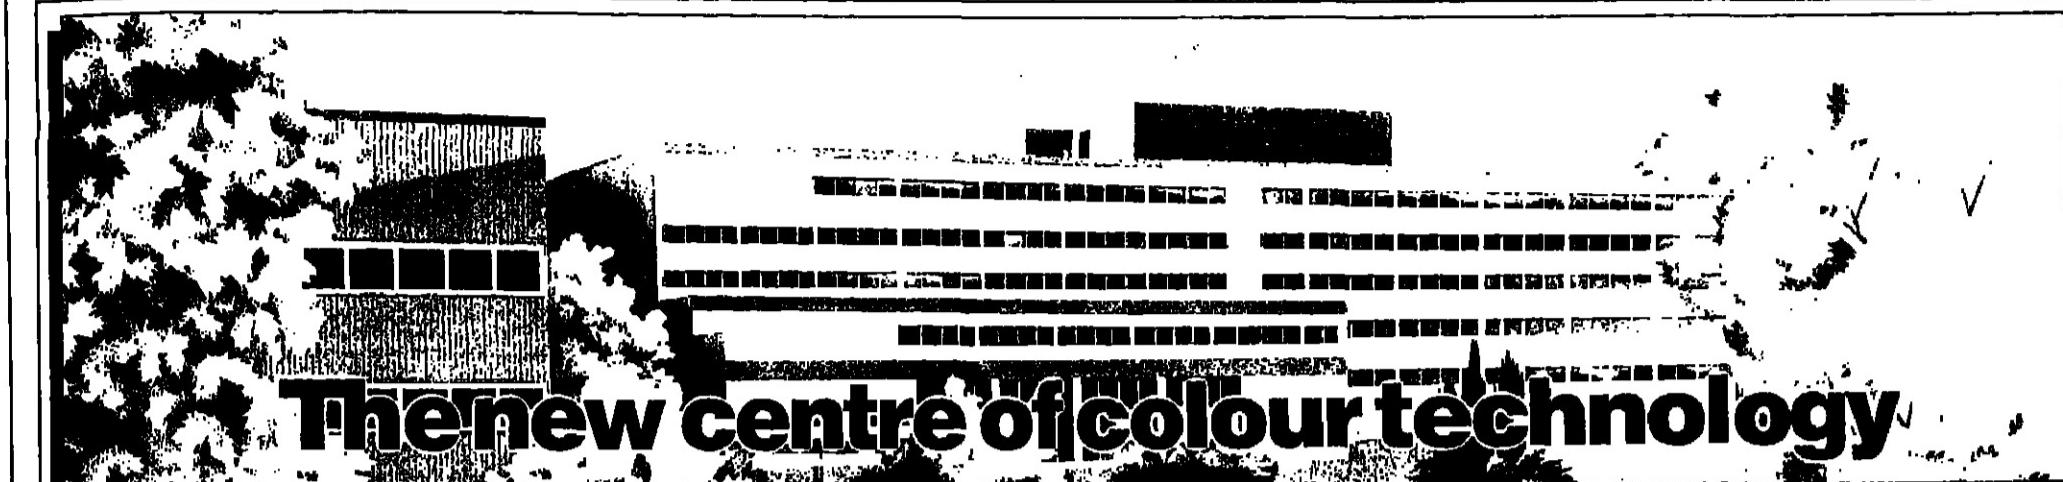

Considerable travel is involved.

Initial interviews will take place in the UK within the next two weeks. If you would like to be considered for this vacancy, please send a comprehensive CV to Joan Lovejoy at Computer Search & Selection Ltd, Hamilton House, Marlowes, Hemel Hempstead, Herts HP1 1BB, or for further information telephone 0442 40761.

Software Engineers

c.£10,000-£15,000 (or more)

The new centre of colour technology

Hemel Hempstead. Your next career move.

After months of planning and preparation, we're now moving into our new R & D centre. For us it represents the culmination of a lot of hard work — and for you, it's the unique opportunity to enjoy the benefits of some challenging commercial projects and outstanding career development prospects.

A British company with an enviable success record in very high resolution colour graphic systems and advanced data-link communications products, ours is a fast moving commercial environment, totally committed to software research and development. A commitment backed by the fact that no less than 20% of our current manpower is directly involved in R & D.

Your specific experience is not as important as your future potential. What we're looking for is a flair for technical software design and programming, a sound knowledge of Assembler and high

level real-time languages, and ideally, exposure to DEC environments. We hope that we've coloured in the picture a little, now we'd like to talk to you and add some depth. Call Stephen Smith our Resourcing Manager on 0442 218311 and have a more detailed chat about what the future could hold. Alternatively write for our information package enclosing a brief CV to: Stephen Smith, Resourcing Manager, Crosfield Electronics Ltd., Three Cherry Trees Lane, Hemel Hempstead, Herts. HP2 7RH.

Systems Specialists DEC and HEWLETT PACKARD

Alderley Edge Rural Cheshire to £13,000 + benefits

THE POSITIONS
Two technical support vacancies exist within a team looking after software developments in a rapidly expanding mini-computer environment. One position will initially be associated with VAX systems software and applications development, and the other with a similar range of work on HP equipment. Applications to be supported require database and on-line systems experience.

EXPERIENCE
 Ideally candidates will be graduates in a scientific or numerical discipline with five years computer experience gained both in programming (including Cobol and/or Fortran) and technical support. Experience gained across more than one computer manufacturer preferably including VAX or HP would be particularly relevant, although specific training will be provided where required.

BENEFITS
In addition to the salary other benefits include up to five weeks holidays, profit sharing and bonus payments, an attractive relocation package and good career prospects.

SUPPORT PROGRAMMER/ANALYST

Salary Range £8,500 - £11,550 p.a. + Benefits

Beds

* International Projects

* Career Position

* PC Involvement

* Blue Chip Organisation

Our Group, with an unrivalled reputation for excellence across a diverse range of high-tech products has successfully established its Central Support Group for the European Sales operation.

Now, due to promotion, we are able to offer a position of PROGRAMMER/ANALYST to provide a full range of services to our plants throughout Western Europe. Based in our prestigious complex in Bedfordshire, you will travel when required, to assist both users and sales staff on the effective use and development of systems.

The person we seek should have experience of COBOL in a mainframe environment, but also have had exposure to the personal computing sector, as this is a growing facility within the Group.

Your brief will be to provide effective programming and analytical support in identifying opportunities to improve sales effectiveness through computerised aids, training on current systems, improved sales systems, training of sales staff on software available within personal computing. The ability to produce systems and programming specifications, together with the task of ensuring that these will enhance the effectiveness of sales staff, will be the main objective.

Personal attributes required are a business orientated personality with the self-discipline to plan your own activity and the ability to interface, at all levels, both in a user and training situation.

This is a career opportunity coupled with an attractive range of benefits, including profit sharing, private health plan and full relocation where necessary.

Candidates wishing to seize this opportunity should contact our Advising Consultant, Brian Harris on 021 236 3781 (24 hour answering service) or send a Résumé to the Birmingham address shown below at the earliest opportunity.

Join a winning team

We realise that we ask for many qualities in our search for new talent. This will come as no surprise to people who are familiar with our methods. A sound computing background is necessary to talk sensibly to the range of people in the industry with whom we deal and an interest in helping those people is vital in providing objective assistance. For those of you who are trapped on a fixed income and who would be attracted by a reward system related to effort, this could be your ideal move. You will be given on the job training to help you achieve performance goals and every encouragement to develop your own style of working. First year earnings should not be less than £14K and can be significantly higher. A company car is provided after a qualifying period with no upper limit to eventual earnings. Some jobs offer high rewards, some offer significant job satisfaction. If you are successful as a recruitment consultant you can have both.

Systems Programmers

Oxon. to £13,000

We are seeking degree level programmers who have experience working at assembler level and with high level languages preferably gained on implementing systems software. Ideally you will also have a reasonable understanding of microcomputer hardware. Our client has opportunities for you using 16-bit processors and gate array technology. In the development of new, advanced products. Relocation assistance where appropriate.

Micro Sales Support

Bucks/Berks. c£11K + car

You will probably have had a programming background in business and commercial applications from which you will have gained in-depth knowledge of CP/M based micro systems. We will expect to see a well presented person with a confident, pleasant manner who can think on his/her feet. Our client's name and products are already an established part of the micro business world.

Technical Applications

Herts. £28.5K-£42.5K

The systems division of a major computer manufacturer requires several experienced analysts/progammers for positions caused by expansion. Ideally 2 years in a well structured environment with 4 or more for team leader level positions. The company expects to host candidates for most of a day to cover technical and personnel interviews and a tour of the facilities. Excellent long term career prospects.

Fortran Prog/Analyst

S. Middx.

to £14,000

Ideally your assembler experience should be MACRO-11 or IBM-170. You will join a team where you will be expected to participate in a range of activities which could include product validation, communication, i.e. technical input to support for PTT and other authorities, LAN interconnections, LAN specials or DEC PDP-11 software. Occasional U.S. and European travel. A golden opportunity to extend your career with a major company.

Software Engineers

Herts. £9.5K-£12.5K

Ideally your assembler experience should be MACRO-11 or IBM-170. You will join a team where you will be expected to participate in a range of activities which could include product validation, communication, i.e. technical input to support for PTT and other authorities, LAN interconnections, LAN specials or DEC PDP-11 software. Occasional U.S. and European travel. A golden opportunity to extend your career with a major company.

CAD/CAM Development

South-West £8K-£15K

This is an outstanding opportunity to join a respected company in the CAD/CAM field with an impressive range of systems. All development work is in 'C' or Pascal on DEC VAX's running UNIX; however, our client is interested in applicants at all levels with one year or more experience of high-level scientific languages such as ALGOL, FORTRAN, CORAL, etc.

Industrial Applications

Hants. £10K-£14K

A major international company has several vacancies created by expansion which require DEC software expertise. Systems are from PDP-11 to VAX with experience required in Macro-11, FORTRAN, BASIC, Pascal and Ada. Projects cover industrial control, instrumentation, real time simulators and in-house applications. If you have from two years experience upwards please get in touch.

DEC Programmers

Bucks. £10K-£12K

Our client is a long established firm of Consulting Engineers. They have prestigious offices on the outskirts of a large town with attractive employee amenities. Although currently running a PDP 11/34 under RTSS/E a VAX machine and DEC micros are planned for this year. We wish to hear from programmers with sound FORTRAN/BASIC experience to work with design engineers.

Development Engineers

Cotswolds £9K-£11K

A specialist subsidiary of a large and successful engineering company requires a number of additional electronic engineers to join existing teams. Ideally graduate level with 2-3 years work experience at component level. Project engineer with hardware and/or software experience in real-time applications are of particular interest. This is a highly interesting and topical application of today's technology.

UNIX "Experts"

London to £14,000

A small team of computer science engineers with extensive experience in UNIX systems and currently developing a very exciting high-resolution graphics workstation, is seeking additional like-minded people to join their team. The company has major financial backing and is prepared to pay whatever is necessary to obtain the right people. An all too rare type of opportunity.

Commercial Analyst/Prog.

W. Middx. c£11,000

This is a marvellous opportunity to join a major international company in a small, friendly in-house D.P. function. Candidates will be expected to modify and develop existing Data General systems in Finance and Personnel applications leading to new, planned systems. We will be looking for previous mini computer experience using COBOL and/or FORTRAN. Long term career prospects.

Detective Programmer

Herts. £10K-£13K + car

Post-sales support provides absorbing work for programmers with an investigative nature. Our clients range of software and hardware engineers with a background in the design of bit-slice computers and microcoding. Typical applications include device drivers, multi-tasking process control, C & C, communication and graphics display systems. An outstanding opportunity to lead a department of designers in advanced product development. Relocation where appropriate.

Real-Time S/W and H/W

S.W. London to £15,000

Owing to healthy and continuous expansion, our client requires additional real-time systems programmers ('C, Pascal, Assembler) and hardware engineers with a background in the design of bit-slice computers and microcoding. Typical applications include device drivers, multi-tasking process control, C & C, communication and graphics display systems. An outstanding opportunity to lead a department of designers in advanced product development. Relocation where appropriate.

Data Administration Analyst

Uxbridge

£21,000

Our client, Rank Xerox, is the world leader in reprographics, a highly successful and profitable organisation with a massive investment in data processing worldwide.

This key appointment is within their International Systems Development organisation. Your role will be to support the development of a large scale integrated IMS DB/DC systems environment for implementation throughout their European subsidiaries.

You will work within a support team whose primary responsibilities include data analysis, data dictionary control, logical database design, and liaison with project groups and operating subsidiaries to establish control and standardisation of corporate data.

The operating environment is multiple IBM 3083 with MVS/SP, IMS DB/DC, Datamanager, Roscoe, Panvalet.

You should have a background in system analysis or programming. Some knowledge of data analysis and the use of data dictionaries would also be advantageous.

Whilst your starting salary will be dictated by your level of experience, you can expect to progress rapidly within an organisation which places considerable emphasis on career development.

To apply please write or telephone quoting ref. ML 7805.

Young Business Champions

Up to £25,000

Our client's business stands at the threshold of a new era. It is already a force in an area of business which has grown at an astonishing rate. This pace will accelerate through the introduction of a new range of state-of-the-art microcomputer products which will take the market forward dramatically.

Our task is to find the core sales team for this new development. We are inviting applications from extremely bright high fliers who want an opportunity to drive the business forward. The jobs to be filled are not for traditional sales people.

We need for this team, people of considerable intellectual ability, high energy and self-awareness. They will work in an extremely stimulating environment as the Company already employs a highly talented and committed team.

For these crucial roles, we expect to meet people who have achieved a great deal and now wish to work in a creative and fast growing environment, and this is of greater importance than the area in which you have acquired your track record to date. If you feel what we have said strikes a chord, we are anxious to know about you and to discuss your role in our client's future.
Age indicator 26-36 years.

To apply either send a curriculum vitae or telephone for an application form quoting reference YBC/GK. Please address your replies to Geoffrey King, Managing Director of Cambridge Recruitment Consultants. These positions are open to both men and women.

Cambridge Recruitment Consultants

Beds

We are a multi-national Corporation and wish to enlarge our Central Support Group which is currently involved in developing, implementing and supporting a range of systems for our European sales operation.

An opportunity has now been created within the Support Group, due to internal promotion, for an experienced Programmer/Analyst with TI 990/COBOL. Having seen the implementation of major new systems in a number of European sites, we require your skills to maintain the momentum of development, later moving into on-site implementation of these systems, travelling to such locations as Helsinki or Madrid.

Our ideal person will have sound experience of TI 990 COBOL and will be able and willing to travel, sometimes at short notice, to various locations throughout Europe for perhaps one or two weeks at a time.

Our network of TI 990's interfaces with a large IBM mainframe resource and, you will also become involved in this and other levels of computing. You will also have the opportunity of becoming involved in up-to-date technology including such interesting aspects as electronic mail. The Central Support Group forms part of a large Management Services Organisation which provides a comprehensive range of d.p. services to internal departments throughout Europe.

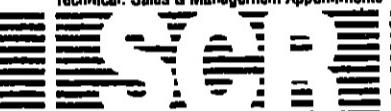

We see this as a superb opportunity for an energetic and ambitious Programmer/Analyst who wishes to build a career with one of the world's major blue chip Organisations. We have the opportunities available — if you have the talents to match. We are quick to identify potential and promote on merit — not on length of service.

We also offer an attractive range of benefits which include profit sharing, private health plan and full relocation expenses. We have attractive modern premises situated close to the centre of an historic market town which is surrounded by pleasant Bedfordshire countryside, yet only 45 minutes from the heart of London.

Give your career a chance to really take off — contact our Advising Consultant Brian Harris on 021 236 3781 (24 hour answering service) or send him your current Résumé to the Birmingham address shown below, at the earliest possible opportunity.

JUNIOR – SENIOR – SPECIALIST ENGINEERS

FOR RESEARCH AND DEVELOPMENT

A unique opportunity to join one of Europe's leading software development teams
Phone 01-370 2012/3 today

Our client, pioneers of software design for word processing, has rapidly achieved a prominent position in the U.K. in the field of high technology. In keeping with their pioneering spirit, they are at present heavily involved in the field of distributed processing. With specialist expertise in design, manufacturing and marketing, their turnover exceeds 50 million pounds, with demands for their products still growing.

Right now to keep abreast of their impressive planned expansion for the 80s, they are looking for a large number of Junior, Senior and Specialist R & D software engineers to come and be part of what are considered Europe's leading software development teams in Word Processing, Personal Computing and Communications technology.

Based in London and the South West of England, the successful candidates will have a minimum of 2 years' experience in Communications/Office Automation or related areas and high level language programming (PLM86 or C). Further experience of Unix, Pascal, Cobol, Coral, CP/M or PC/DOS will also be an advantage. Candidates should also have some knowledge of the design of operating systems and Database techniques.

In return we are offering extremely competitive salaries ranging from £8,000 to £18,000 and company cars, depending on age, experience and potential. This is in addition to a very valuable benefits package.

So if you have the experience we require, combined with ambition and the determination to succeed in a young, dynamic organisation at the forefront of technology, then we would like to hear from you.

For further details, please ring Steven Knowles-Baker on 01-370 2012/3, or alternatively, send a brief C.V. to him at N.K.B. Associates Ltd, 159 Gloucester Road, South Kensington, London SW7 4TH.

All enquiries will be treated in the strictest confidence.

In touch with the future

Analyst/Programmers FORTRAN ? - A rare opportunity.

Manchester to £10K + Car

As the computing industry continues to change rapidly, only those who can adapt to change and gain relevant experience quickly will ultimately be successful. To do this, you need the opportunity to work in an environment which offers exposure to the latest technology both hardware and software.

Our client is the European Headquarters of one of the largest computer service organisations in the world. The company deliver business solutions into specific industry sectors via bespoke software development, facilities management, and turnkey systems based on mainframe to micro computers. Extensive use is made of a wide range of DEC hardware and software.

Due to the company's outstanding success, they seek to recruit a number of people with sound FORTRAN experience to play significant roles in major projects.

Applicants should be able to participate in the design of systems and have the necessary personal skills to be able to work closely with clients and supervise other project staff.

These positions offer you the opportunity to:

- Stay at the forefront of technology (including the use of UNIX, Relational databases, 16 bit micros etc.)
- Broaden your analytical, programming and project management skills on a wide variety of applications.
- Progress rapidly within a diverse and stimulating computer services environment.

The excellent remuneration package includes an initial salary of up to £10,000, company car, and flexible hours.

Please telephone Andrew Cousins on (0794) 595346 for further information or write enclosing full c.v. to the Reading Office. Interviews will be held in Manchester or Central London.

SALES EXECUTIVES

BYTE SHOP BUSINESS CENTRES

c.£15K PLUS CAR & BENEFITS PACKAGE

LOCATIONS: CENTRAL LONDON, MANCHESTER,
BIRMINGHAM, SOUTHAMPTON, NOTTINGHAM, GLASGOW

Due to rapid and continuous expansion, The Byteshops, the U.K.'s leading chain of specialist micro-computer stores, are seeking high calibre Sales Executives at each of their regional business centres. Applicants must have a minimum of two years' sales experience in the computer industry and will already be selling micros in a retail, dealer, manufacturing or distribution company or alternatively have worked with minis or mainframes. As The Byteshops are one of the U.K.'s largest IBM PC and ACT Apricot dealers, familiarity with these models would be an advantage. Greater importance, however, will be attached to a knowledge of routine business and/or specialist application software. These are genuine career opportunities for ambitious Sales Executives who can work on their own initiative.

A generous salary package is offered with up to £10K p.a. basic plus a realistic commission scheme enabling earnings of £15K p.a. to be fully achievable (most of our Sales Executives are already earning considerably more than this). As part of the Comart Group, you are assured of big company benefits, which include a company Ford Sierra 1.6L and both profit sharing and pension schemes.

Interviews will be held locally, but in the first instance telephone June Hamilton or Helen Wilson on 0480 215005 (24-hr. answering) for an 'information pack' and further details, or if you prefer, write and tell us about yourself, enclosing a short CV, addressing your letter to: June Hamilton, The Byte Shop Head Office, Little End Road, Eaton Socon, St. Neots, Huntingdon, Cambridgeshire PE19 3JC.

Trading Places

Analysts and Analyst/Programmers c.£14K. West London

Rather than just sitting and watching others doing it, step up there and join the action.

The MIS team at UIP is an integral part of the whole worldwide business of motion picture marketing and distribution. That's why its dynamic growth is just a reflection of the company's success story.

And now there's the emerging new industry of Cable TV too, with all its obvious potential. Their confidence in the future is mirrored in a working environment that's professional, informal and designed to reward initiative and achievement.

Are you ready to trade places and join some top performers?

Analysts c.£14,000

To take the stage you'll need a background in applications programming with at least two years' good experience of analysts on commercial/financial systems development, ideally on IBM mainframe. Plus strong user contact skills and the ability to see difficult projects through to a successful conclusion - on time.

Analyst/Programmers c.£13,000

To get into this picture you'll have to demonstrate a minimum of 2 years' experience of IBM Cobol development programming under DOS/VSE with some online experience, ideally CICS. Plus some real ability in analysis and the potential to grow with the company. That's the ticket!

To join the cast call our adviser Richard Goldie on (0992) 552552 or send him a brief C.V. at Macmillan Davies Personnel Consultants, The Old Vaults, Parliament Square, Herford SG14 1PU.

UNITED INTERNATIONAL PICTURES

United International Pictures provides worldwide marketing services for the films of MGM/United Artists, Paramount and Universal.

Stockbroking

City of London

Twice-yearly bonus

This progressive stockbroking firm has been operating since the turn of the century and was a pioneer in the use of economic analysis in investment decisions. They were also among the first stockbroking firms to deal extensively overseas and to advise clients to include overseas investments in their portfolios. As well as the usual broking services, they offer professional expertise in the following areas:

- Investment/Portfolio Management
- Investment Planning
- Economic Analysis
- Economic Research
- Gilt-Edged Market
- Overseas Investment
- Company Launch

The DP department is now well established, having developed its own standards and structured approach, yet has remained small—about a dozen—friendly and enthusiastic. They use DEC and HP equipment.

In addition to good salaries, a bonus is paid twice-yearly and staff are eligible immediately. These bonuses add significantly to individual's remuneration.

Please contact JOAN AINSWORTH on 01-681 8311 or write to her at: C.S.S., 6th Floor, Carolyn House, Dingwall Road, Croydon, Surrey CR0 9XF.

Analyst/Programmer £10-12,000

Following its planned expansion path, the DP department is now looking for an analyst/programmer of good academic background, able to be responsible for their own part of a project from start to finish.

User contact plays a large part in the day-to-day activities of the department, placing requirements over and above those of technical skills on applicants. These interpersonal skills and an alert mind are more important than particular hardware and software experience, although obviously, any previous experience in the financial sector and knowledge of BASIC-I-2, would be very useful. If you have 1-3 years' experience and would like to contribute to the further success of DP within the partnership, we should like to hear from you.

Computer Search & Selection Ltd

COMMERCIAL OPPORTUNITIES

PL/I Programmers Insurance, Surrey To £11,000 p.a.

As an essential element of this company's growth plans for 1984, a number of positions have been created for PL/I programmers to support and develop a leading Financial organisation's current projects. An IBM/DOS/VSE background is essential and SHADOW experience would be desirable, however, in house training is provided. In return the company offers a range of benefits which include flexible working hours, excellent pension scheme, subsidised staff restaurant, social and sports centres, 20 days annual holiday, and the opportunity to develop your career within a progressive company.

Systems Analyst (IBM 4343) Insurance, Surrey To £13,000 p.a.

A challenging opportunity exists for a Systems Analyst with a good knowledge of IBM online database systems to make a significant contribution to the development of a major project within this expanding DP department.

The ability to liaise effectively with users is essential and in return the company offers an excellent career and benefits package which includes: free life assurance, flexi-time, video training/courses and the chance to work with the latest technology.

Analyst/Programmer Major Oil Company, W1 £8-£12,000 p.a.

A major International Oil Company based in the West End currently has vacancies for Programmers and Analysts who wish to become involved in a wide range of Commercial projects. Experience of IBM 4341 DOS VSE CMS is an essential prerequisite alongside a knowledge of CICS and DLI.

Excellent company benefits include Group BUPA, £1,500 London allowance, LVs (£500 p.a.), 4 weeks holiday, 3% contributory pension etc.

For more information about these positions call Andrew Rutherford on 01-938 1804 or write to him enclosing a career resume.

FINANCIAL APPLICATIONS ANALYST/PROGRAMMERS SUPPORT CONSULTANTS

Walton-on-Thames & Stonebridge Park

SPERRY is a recognised world leader in the Computer Industry. This progressive and dynamic organisation is seeking Applications Development Analyst/Programmers and Support Consultants for a Financial Applications System.

We are looking for people who have experience in COBOL, on-line systems programming, Database or banking applications. This would be an ideal opportunity for those with approximately 5 years' commercial experience who now wish to further their career with a major manufacturer.

The Development Team is based at our offices in Walton-on-Thames, Surrey and the Support Group at our headquarters at Sperry Centre, London NW10.

Positions are available at a number of levels. We are offering starting salaries of between £9,000 and £13,000 in addition to the company benefits you would expect from a large organisation. Certain positions will include a company car as part of the package, and will necessitate international travel.

Please write enclosing your cv to Mrs. Valerie Solomon, Sperry, Sperry Centre, Stonebridge Park, London NW10 8LS.

SPERRY
We understand how important it is to listen.

COBOL Programmers

Croydon

to £10,000

Our client is an established Management Services department, in the process of developing new systems.

If you have at least one year's practical COBOL experience, preferably gained in a VME, DME or VMS environment, these positions offer you the opportunity of initial training in appropriate areas and other training as your career develops.

DEC Programmers to £11,000

Surrey

- Subsidised mortgage
- Non-contributory pension
- Life assurance
- Free BUPA
- Removal assistance
- Flexible hours
- LV's

Our client, part of a major group of companies, is a young, dynamic software house looking to recruit experienced programmers, who will enjoy being part of a growing company and making their own effective contribution to its growth. Client contact is an important part of the job—which means that we are looking for able communicators who are articulate, presentable and in possession of a wide range of technical skills. These technical skills will include programming in COBOL and/or BASIC, (on commercial applications using DEC equipment) program testing and, ideally, program specification writing.

In addition to the skills you bring with you, you will subsequently acquire others—in particular on micro-computers (including SIRIUS and APRICOT). The systems you will be developing will be both batch and on-line.

To apply for these and other

positions, please contact
Joan Ainsworth on 01-681 8311
or write to her at Computer Search
& Selection, 6th Floor,
Carolyn House, Dingwall Road,
Croydon, Surrey CR0 9XF.

**VAX/VMS

**Computer Search
& Selection**

Our client is a long established British company with an enviable reputation worldwide for engineering excellence. With the production of over 100,000,000 precision components each year, they rank as a major force in the automotive world and their products are used in nearly every make of vehicle in virtually every country in the world in addition to other sectors within the industry.

With the introduction of a broad-based 5 year DP strategy, this company is dedicated to information technology which includes the latest in developments: CAFS, NETWORKS, Office Automation, CAD, etc.

Central to this, is the recruitment of a Senior Systems Analyst who will be able to draw on experience gained in the areas of Sales Order Processing, Invoicing, Production Planning, etc.

The candidate's age will not be a barrier as maturity of character will be a positive asset. As this is a development position, candidates will need to demonstrate written and oral communication skills, as well as the ability to deal with users at all levels. This is a key position and will offer considerable variety and scope for personal development.

For further information and an informal discussion please contact Marshall Cligman at the London number below or in the evenings at EPPING 76085

WANTED-ALIVE-

THE TOUGHEST COMPETITORS in (or out of) the business

When we say tough, we mean the sort of hard-bitten, earnings-driven Sales people who need success as a plant needs sunshine.

We are a leading U.K. data communications manufacturer, marketing innovative data comms and electronic office equipment to all sections of the business community.

Our reputation and indeed our success has been built on extreme sensitivity to market requirements, the highest technical expertise and attractive pricing.

Product lines include: Modems, multiplexors, Data exchange switches, L.A.N.s Network Access modules and our new 32-bit super mini to provide the solution to large corporate networking problems. We expect this latest product to boost company growth far beyond the current 80% p.a.

You will have a first class record selling to computer users or selling a technical product (photocopiers, components), and will wish to join a company where effort and salesmanship are rewarded by extremely high earnings and rapid career development in a dynamic organisation. Basic salaries are excellent and our top salesmen are earning in excess of £45,000 p.a.

A technical/computer background is desirable but not essential as our most successful people are those with the highest level of salesmanship. In short, we're looking for tough cookies.

For further information and an application form, please telephone our consultants Mike Reynolds or Craig Millar, or simply clip and return the coupon below.

MANAGEMENT & EXECUTIVE SELECTION

SYSTEMS AND PROGRAMMING

PL/I £8-12,000

Internationally renowned marketing firm on the Middlesex/Berkshire borders requires an analyst/programmer with around three years' IBM PL/I experience to take a leading role in their team. They utilise DOS/VSE, CICS and DL/I. You will be developing a range of on-line sales and marketing applications, liaising with users on a regular basis and writing specs. Benefits include a bonus. I also have positions in London, Surrey, Middlesex and Kent for programmers with 18 months+ PL/I, offering excellent career progression, relocation expenses, etc. CW/1741

IBM ANALYST/PROGRAMMER To £12,000

My client has recently moved to North West Middlesex and houses an IBM 3431 under DOS/VSE, VM/CMS with CICS. They require analyst/programmers who wish to strengthen their analysis skills from both a technical and business point of view. If you have two years+ IBM COBOL, DOS/VSE, preferably with some CICS and VSM, then I would like to tell you about this outstanding opportunity in a progressive and expanding organisation. CW/4166

RPG III PROGRAMMER CITY £11,000

My client, a financial establishment in the City, is looking for a graduate programmer with around two years' RPG III experience gained in a financial environment. In return a very attractive salary is offered together with the chance to gain analysis exposure and user contact in a small but efficient D.P. department. If you are looking to increase your financial rewards and gain new skills, please contact me now. AW/4256

ANALYST/PROGRAMMER LONDON c.£11,500

An integrated manufacturing, marketing and sales company in Central London is looking for an experienced analyst/programmer to work on an IBM System 34. The position reports directly to the DPM and requires a suitable person to develop new integrated information systems and see them through to implementation. If you have RPG II programming experience, and some exposure to analysis, with an innovative mind, then this company offers a high salary and many fringe benefits. AW/3017

ICL ME29 PROGRAMMERS, ANALYST/PROGRAMMERS LONDON To £12,000

This prestigious financial concern are currently looking to recruit a number of D.P. professionals to enhance their present team. They wish to hear from candidates with relevant ICL COBOL experience and knowledge of either TPS, MIS or finance. You will NOT be joining a maintenance team, there are a number of new development projects underway. So if you have worked on a major development system and have genuine experience of on-line work this company offers excellent prospects. BW/4000

ICL PROGRAMMERS/ANALYSTS - MANAGEMENT OPPORTUNITIES LONDON £8,000 To ?

There are currently a number of vacancies within this well-known ICL company for ambitious and talented applicants, with an integral and active role to play on a variety of ICL hardware. This includes Dual 2950 and a number of locutors with DPS 21s. The development work is in COBOL and ILLIAC with CP/M on the smaller machines. You will be working in a friendly department on a variety of financial and operational systems and must be highly motivated. Lots of user contact and sound promotion prospects. MW/4461

'DEC' SKILLS ARE WANTED

To £11,000
Based on the Middlesex/Berkshire borders, this expanding Systems House is seeking to recruit three Analyst/Programmers with good DEC skills. You will be an integral part in a small test environment, developing systems in a variety of areas to high standard. To qualify you must have ability in one of the following: RSX-11-M, FORTRAN, BASIC+/-2, VAX/VMS, in either scientific or commercial applications. Training is offered in other areas and you will be encouraged to deal first-hand with the client and become involved in analysis. HW/4399

DEC PROGRAMMERS To £8,500

If you can offer six months+ commercial programming experience in a RSTS/E, BASIC+ environment, my London-based client can offer you the opportunity to further your career and update your knowledge. This large financial organisation currently houses a DEC/PDP but will be taking delivery of VAX machines in the next few months. Full training will be provided on this machine, and also in the analysis and communications areas. There is much development work planned. Benefits include B.U.P.A., I.V.S. and a generous yearly bonus. HW/4392

SYSTEMS ANALYST CITY

To £14,000 + Mortgage
This leading financial organisation requires a Systems Analyst with two-three years' experience in analysis and a background in on-line systems development within an IBM Hardware and Software environment. The candidate appointed will be responsible for performing data-gathering investigations in user departments, implementing and developing systems, and the supervision of system testing and staff. Excellent benefits which include Subsidised Mortgage. CW/4780

SENIOR PROGRAMMER HERTS £9,000+

This international manufacturing company based near the M1 in Hertfordshire, run IBM 3083s with CICS and DL/I. They are looking for a programmer with 18 months+ IBM COBOL and some on-line and database knowledge. They offer excellent training, the chance to develop your analytical skills, and utilise your talents and ideas to the full. If you are young and ambitious and feel that you would fit into a team environment working on development and maintenance projects, this could be the job for you. AW/4325

DATAPPOINT UNLIMITED OPPORTUNITIES CITY/BERKS £10-12,500

My client is a prestigious UK financial services organisation with worldwide links. Due to continued expansion they now require talented analysts/programmers with good Datapoint/Databus experience for several major interesting development projects. Once progression opportunities are unlimited and if you prefer to specialise in a certain area you will be given every opportunity to do so. People with the skills and ambition to work in this fast growing and challenging environment will be rewarded with an excellent package and first-class working conditions. MW/4356

MINI COBOL ESSEX £10,500

My client, a well-known household name, urgently seeks an "above average" COBOL programmer. They currently utilise B800, and are in the middle of upgrading to B900s. Burroughs experience would certainly be an asset, however the company invite applications from self-motivated individuals with a solid commercial background and a minimum of 18 months COBOL expertise. The work itself involves interesting development plans and enhancement to existing systems. This company also houses IBM Hardware and as all vacancies are advertised internally the opportunity to travel on IBM will be available to you. First-class benefits include flexible, subsidised restaurant and profit share. MW/4461

HEWLETT PACKARD STOP PRESS!!!!

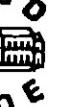

Senior Analyst/Programmer. European Travel. £14,000 Berks. D.P.M. Aged 30+. 10 years+ good HP 3000. £20,000 Berks. Analyst/Programmer. Lots of development. £11,500 Herts. Project Leader. Great prospect. £15,000+ Car Beds. Analyst/Programmer. Manufacturing exp. £13,500 Essex. Systems Analyst. Knowledge of IBM. Management prospects. £13,500. London. Programmer/Analyst. Existing applications. lots of analysis. £12,500 W. London. HW/1616

These are just a selection of the positions we have available in London and the Home Counties. If you have 12 months+ experience in systems and programming, on any machine, we would like to hear from you.

ORGANISATION FOR ECONOMIC CO-OPERATION AND DEVELOPMENT

An opportunity has arisen for an analyst/programmer with a minimum of two years' IBM COBOL and sound analytical experience. The installation is an IBM 4331 with a wide range of systems under development and significant expansion on the on-line network using CICS and DL/I. The company believe they can offer a rewarding career path as the main concentration is on systems development. The position carries benefit normally associated with a large company. CW/4376

IBM SYSTEM 38 WEST END To £11,500
My client, an international consumer products group, now has openings in their D.P. department for an experienced programmer and analyst/programmer both with an RPG III background. This is an expanding department therefore the candidate appointed can expect career progression as a main emphasis of the positions will be the implementation of new systems. To discuss these positions further please contact me as soon as possible. CW/4349

DATA COMMUNICATIONS ANALYST

Reporting to the Head of Systems Software, the appointee will be responsible for the installation and maintenance of several Burroughs and IBM networks and for the development of the communications software. The successful candidate will have:

- degree in data processing or other relevant discipline;
- minimum of 5 years data processing experience in an interactive environment with a large community of users;
- proven ability to coordinate and supervise the work of staff of several units and liaise with equipment manufacturers.

(Ref. WEEK (83) 33)

The successful candidate will have:

- degree in data processing or other relevant discipline;

- minimum of 5 years practical experience in data communications;

- expertise in standard communications protocols, European standards for local area and international networks, and good knowledge of communications software.

Familiarity with Burroughs data communications and software is desirable.

Attractive salaries and excellent benefits are offered.

Work will be carried out in Paris but occasional travel might be necessary.

Vacancies open equally to both male and female candidates. Applications from nationals of member countries, together with detailed CV form in English or French and specifying the chosen post should be sent to: Personnel Division OECD

TECHNICAL SUPPORT C. £12,000

Update Computers, a young and expanding systems house, is looking for a capable and experienced person to be responsible for providing hardware support and to help in the further development of its systems.

Applicants should be experienced in maintaining microcomputers, hard disks and other peripheral equipment down to board level. Experience with local area networks would be an advantage.

A successful person could look forward to a larger role within the company.

Present systems are based upon the IBM PC.

Benefits include 5 weeks' annual leave, a non contributory pension scheme and a private health scheme covering the applicant's family.

Central London location.

Systems Programming

Salary to £11500

We are a well established and highly respected Company with a substantial and innovative history of Data Processing activity. As such we are fully aware of the need continually to appraise the benefits available from modern technology.

We are based on the Staffordshire/Derbyshire border, in an area which offers the dual benefits of beautiful countryside and access to the shopping centres and nightlife of several large towns close by. Housing is plentiful and inexpensive and excellent sporting and cultural activities are within easy reach.

Our Data Processing configuration comprises a large IBM compatible mainframe, currently running MVS, CICS and a TSO equivalent, supporting an extensive 3270 telecommunications network. However, we are reviewing carefully our level of MVS and are actively planning the introduction of VTAM.

Staffs/Derbyshire Border

You will need to be already employed in a systems programming environment and will be required to demonstrate previous experience, together with a sound understanding, of either MVS or CICS. As VTAM features in our future plans, a knowledge of this would obviously be advantageous.

The comprehensive remuneration package includes pension, Life assurance cover, 24 days annual leave and full relocation where appropriate.

If you can relate to this challenging opportunity, contact Jim Mitchell on 021-236 3781 (24 hour answering service) or at home on 021-427 2291 (evenings and weekends until 9.00 p.m.).

You are assured of a prompt and confidential interview.

datascene

Datascene International Limited
Sceptre House, 189-193 Regent Street, London W1R 7FB
Telephone: 01-439 7871 Telex: 25851

We're bringing our jobs to you.

We are coming to your doorstep because we're an energetic Company not content to stand and let things happen. We are prepared to go out and get what we want — YOU!

The last few years have consolidated our position as a leading manufacturer in the commercial real-time computer field. We are now building on this and expanding: our product ranges — our marketing base — our field of operations.

Meet the challenge of some of today's most stimulating opportunities and help us to achieve even greater success in the forefront of tomorrow's technology.

Right now we seek wide ranging skills for Wythenshawe, South of Manchester and Programmers and Designers for our Aberdeen office.

Come and meet us for an informal chat in a friendly atmosphere and find out why we think you should now come to us. **FERRANTI**
Selling technology

Programmers
Relevant skills include any of the following:
CORAL 66, FORTRAN, C, PASCAL,
ASSEMBLERS, UNIX, ZRTS, MTOS, CPM,
MSDOS.

Systems Designers

Design experience in micro-processor based products; real-time information and communications systems or process control.

Hardware Designers

Experience of modern computer architectures and technologies.

Technical Authors

Skilled in designing technical and user documentation for products and large scale projects.

Technical Support

To provide customer support of high technology software products.

Project Engineers

Ability to configure equipment for a variety of systems and liaise with outside sub-contractors.

ATE Programmers

To design test programs for automatic test equipment on new hardware development.

Sales

With a proven track record in sales or sales support OR relevant experience of process control, communications, or terminal systems.

Now meet the people from Ferranti Computer Systems.
Members of the Wythenshawe team will be available for informal discussion between 4.00 pm and 9.00 pm at various locations throughout March.

The Market Leaders

SMR

Sales & Marketing Recruiters Ltd
WITH TECHNICAL SUPPORT PEOPLE LTD.

SALES EXECUTIVES FREEDOM TO BREATHE, ROOM TO GROW!

Many sales people never reach their full potential, because they are constantly frustrated by executive whim or stifled by corporate edict. How nice it is, therefore, to make available such jobs as these in

SOUTH EAST ENGLAND and the WEST MIDLANDS

that not only provide a 'ground-floor' opportunity within a fast growing and progressive organisation, but which also gives the individual salesperson freedom of action, scope for creative selling and real involvement in shaping the destiny of the company.

Our client is a well established name in both minicomputer based turnkey systems and computer terminals and has secured some 25% of a specialist market. Such is the success, that all of their existing salespeople consistently achieve target. This is most likely due to the company's unusually high investment in advertising.

We are seeking three accomplished salespeople; one with significant experience of selling DEC based commercial and industrial Turnkey Systems up to a value of say £200k, and two with a good track-record of selling Computer Terminals. In the former case, a pre-sales support analyst would also be considered. In the latter case, some exposure to DEC equipment will be advantageous, but not imperative. Whereas, a proven ability to communicate at a senior level, is essential.

An attractive compensation package is negotiable, including a company car and a variety of fringe benefits.

Please contact Lindsay Howie (London), or Roger Dodd (Midlands), quoting reference HSC/024.

**£15k + CAR + BUPA + PENSION SCHEME
+ U.S. TRAINING**

Our client, a leading manufacturer in micros, has a ground-floor opportunity in its London office to become the senior support representative. He or she will be expected to make customer visits in pre- and post-sales situations, to present the detailed benefits of our client's prestige products, evaluate problems and propose solutions whilst being prepared to modify standard software. Freedom to exercise own initiative is a key part of this position and our client will consider applicants with a view to future progression.

STOP PRESS... U.S. 32-bit mini manufacturer offers new opportunities in office automation - comm., etc., applications to support people with ambition!

Keith Wallis now on 01-843 4844 or 048641 2676 (evenings/weekends)

ALLTRONICS PEOPLE (Agy.)

COMPUVAC

COBOL PROGRAMMERS

To £12,000
We currently have a large number of openings for COBOL Programmers. Ideally you will have worked on IBM mainframes for at least one year and have some knowledge of software, especially CICS and DL1 or IMS. Vacancies exist in and around London.
REF: LD/CW

PL1 PROGRAMMERS

To £11,500
A number of clients based in London and the Home Counties are looking for PL1 Programmers at all levels. Any experience of CICS or IMS would be advantageous but not mandatory and most opportunities offer a good career path into Senior Programmer and Analyst positions.
REF: LD/CW

ANALYST PROGRAMMERS

To £14,000
Our client based to the South West of London is urgently seeking Analyst Programmers with a good knowledge of COBOL or PL1 on MVS or DOS systems. You should also have experience of on-line systems working from feasibility through to implementation.
REF: LD/CW

SYSTEMS PROGRAMMERS

To £19,000
Based in the London area, our clients are looking for experienced people with a sound knowledge of DOS, VM or MVS systems. Applicants must have experience of some of the following: CICS, ACF, VTAM, DL1, IMS, TSO, SNA. A number of the positions include generous benefits packages.
REF: RC/CW

SYSTEMS ANALYSTS

To £15,000
Candidates should have up to five years' experience in Analysis and would have seen a major project from feasibility through to implementation. You should possess good communications and supervisory skills and preferably have worked on the database side. Positions are based in Home Counties and London.
REF: RC/CW

IBM CONSULTANTS

To £20,000
A large software house based in Central London are looking to recruit senior data processing personnel in a number of areas with sound IBM mainframe experience on OS or DOS/VMS systems. A previous programming background in ASSEMBLER would be desirable as is proven supervisory or management experience.
REF: RC/CW

PROJECT MANAGER £15,000

Babygro Ltd., a leading manufacturer of babies' and children's clothing, employing 500 people at their Kirkcaldy and Cowdenbeath factories, wish to appoint a Project Manager for an initial 2 year contract.

The person appointed will lead the implementation of the company's Interactive Manufacturing Control System utilising NCR 9040 system hardware.

Reporting directly to the Director of Finance, the successful applicant will have the maturity and personal authority to liaise with both senior management and end-users to ensure the satisfactory completion of the project.

This key role demands a high degree of enthusiasm to get the job done. Previous experience in a manufacturing environment is essential and a knowledge of COBOL and previous NCR equipment exposure is desirable.

A salary of £15,000 p.a., free life insurance and assistance with relocation to this attractive part of Fife, within easy reach of Edinburgh, will be the reward.

If you feel that you have the experience and ability for this demanding opportunity, please call Jenny Combe on 031 226 5381 for a confidential discussion; alternatively forward a detailed O.V. to her at:

ATA Selection & Management Services Ltd.

Anglia House
26/28 Frederick Street
Edinburgh EH2 2JR

(0372)

City OPERATIONS

Deputy Controller to £10k

An ideal opportunity for a conscientious Senior Operator/Shift Leader to move into a Days Only Supervisory position.

Our client is a progressive organisation with markets worldwide and an annual turnover exceeding £95m. The London office is the focal point of their operation. The Data Processing department has a good reputation within the company and is recognised as a vital part of their business.

The configuration is a Honeywell DPS4 (75MB) running under GCOS4; one PERKIN ELMER 3229 (1MB) and one PERKIN ELMER 3230 (2MB).

Whereas knowledge of these disciplines would be preferable, comprehensive training will be provided for the right applicant with a good supervisory background.

You will be responsible for the effective and efficient operation of all computer systems both in the computer room and in the user departments. The appointment involves an element of hands-on operating and in addition you should possess good administrative skills and the ability to communicate at all levels. Ideally you will have 1-2 years experience in a similar position within a small D.P. environment.

To learn more about this challenging role contact Steve Parsons on 01-836 8411 or send your curriculum vitae to Co-Operators
68-69 St. Martins Lane, London WC2N 4JS

Co-Operators

68-69 St. Martins Lane, London WC2N 4JS

MAXIMISE YOUR POTENTIAL

Our Client, a major driving force in the semi-conductor industry, has spearheaded many of the technical innovations over the past decade. The European Division of this major blue-chip Organisation is making full use of systems innovation to enhance and benefit the efficiency of their operations. With plants throughout Western Europe, the systems are developed and supported by a Central Support Group based in the UK. Due to major developments in hand and the need to further enhance this facility, they are able to offer two unique career opportunities for the following:

Programmer/Analyst

£8,500 - £11,500
+ Benefits

You will be developing and supporting systems throughout the European Division and will need to travel as required spending short periods off site if necessary.

Your skills will have come from IBM experience probably 370 based, including COBOL/DL1. With an integrated systems policy the use of communications and interface facilities incorporating TSO/SPF is standard.

The role will demand self discipline in organising your own schedules and a business approach in analysing requirements and dealing with end users at all levels and in a variety of situations. Without doubt a challenging role, in an Organisation where ability, not length of service, is the criteria for career progression.

The current environment utilises IBM mainframe facilities, with a range of minis and micros throughout the installation. Providing services to a group utilising over 22,000 terminals, 8,000 stand alone processors and 470+ disk drives creates a dynamic environment offering tremendous challenge and interest. These career openings within this highly regarded Organisation represent the opportunity to see yourself develop to the leading edge of the industry. Additional benefits include profit sharing, private health plan and full relocation where necessary. Candidates should contact Brian Harris on 021 236 3781 (24 hour answering service) or send a current Résumé to the Birmingham address shown below at the earliest opportunity.

SENIOR PROGRAMMERS IBM CICS COBOL INTERNATIONAL BANK

This leading European Bank, well established in the heart of the City, is undergoing substantial expansion and requires two additional senior programmers. These candidates must have a certain spark, enthusiasm and imagination, and in return for these qualities will be offered a remarkable opportunity. The Bank has IBM 4341s with CICS and advanced online database systems and needs people to:

- Design CICS COBOL Systems
- Work in the centre of CICS expertise
- Provide guidance to other programmers
- Demonstrate analysis potential for the future

This organisation employs teams of dedicated individuals, who use their initiative to participate in developing new systems and are given the freedom to use their creativity.

THE SALARIES ARE COMPLETELY OPEN: There is no fixed scale for these positions.

You will negotiate your salary to reflect the experience and future contribution you can make. You will also be entitled to the very substantial benefits associated with a major banking institution.

For details phone JILL McGill on 01-734 9723 or 263 2261 (evenings and weekends)

COMPUTER SERVICES CONTROLLER – Direct Mail

One of the country's leading Direct Mail companies requires a Computer Services Controller with proven ability.

Their current success and future growth is dependent on bureau based computer systems for the manipulation and delivery of data that must meet the exact needs of clients.

To manage these vital functions, from their central London offices, requires an enthusiastic professional, with strong organisational ability and a background that includes:

- ★ Considerable knowledge of the use of computers in direct mail
- ★ Familiarity with de-duplicating techniques and printing methods
- ★ Provision of systems advice to clients
- ★ Control of computer services via terminals
- ★ Job scheduling

A generous salary will be paid, commensurate with experience and the importance attached to the position. Excellent company benefits include: a generous travel allowance, participation in the bonus scheme, pension and free medical assurance.

Please contact Tim Pearce or Ivor Brookstone on 01-637 9611 or send your c.v. to the address below.

Please advise which companies you do not wish to have your details forwarded to.

MANAGEMENT & EXECUTIVE SELECTION

Langton

Langton Electronic Publishing Systems Limited is an established but fast expanding systems house specialising in information management.

As a stable and profitable organisation they cover areas such as text and graphics, demand printing, videodata, on-line retrieval systems, optical and video discs and computer assisted retrieval and delivery systems.

TECHNICAL SUPPORT ANALYST

UP TO £14,000

As part of their expansion plan they now require a technical support analyst.

You will be involved in the installation and support of electronic publishing software products, including trouble-shooting on customer sites.

The position will require some travelling to Europe and potentially North America.

Ideally your background will include eighteen months plus experience in a development or support environment with exposure to IBM VM.

EXCELLENT BENEFITS PACKAGE

- * Bonus Scheme
- * Interest Free Season Ticket Loan
- * Pension Scheme
- * Flexitime

ENGINEERING OPPORTUNITIES Northants

Our Client, market leaders in the provision of turnkey systems to interactive graphic and CAD applications; have seen a marked growth in their Client base and are now able to offer two unique career opportunities.

As sole UK distributors of leading interactive systems used across a diverse Client base in industry, commerce and public utility Organisations, the engineering facility is a vital factor in their success. Utilising the latest systems innovations which include VAX, 11/23, H.P. and M8800 technology, and with a planned development policy coupled to continuous evaluation of market and product availability, they fully intend to sustain their established reputation for technical excellence.

To support this, they now seek to appoint two key people into critical positions, in order to further improve the provision of a complete and efficient engineering facility servicing installations involving critical production areas.

Service Manager

c.£15,000 + incentives

2 Litre Car

Your task will be to further develop and implement a Service Organisation on a system basis, to support users where down time is critical.

Able to demonstrate a solid technical career encompassing both hardware and software experience, you will lead from the front a competent engineering staff.

Experience in graphic/CAD facilities would be advantageous, but more critical is your ability to implement effective Management controls and supply technical and motivational leadership to your staff.

Providing support services from centre, phone support will play a major part, though you should be prepared to take on site visits personally if required.

To apply, candidates should possess a minimum education standard of HND (preferably a Degree) and be able to demonstrate a career to date that proves technical competence and the ability to assimilate new skills. By contributing to the growth of the Company, you can be assured of personal benefit and excellent career opportunities. Full induction and product training, together with generous incentives and benefits, including pension, private health plan and full expenses, indicate the environment. Full relocation assistance is available where necessary. Candidates should contact the Advising Consultant, Brian Harris, on 021 238 3781 (24 hour answering service) or send current résumés to the Birmingham address shown below as soon as possible.

DALROTH

SAUDI ARABIA
TAX FREE £19,000-£32,000

IBM · DEC · WANG

Commercial or
T.P. Network Expertise

The skills currently required to maintain the thrust of new development now urgently include personnel from areas of medium size mainframes and small computing systems backgrounds.

You will be working within a computing environment internationally recognised for the development of their state-of-the-art equipment and facilities; socially you will discover that located in the Arabian Gulf leisure and sports activities are also almost without limit.

The standard consultant's package includes free flights, accommodation and Medicare. This together with the generous tax-free salaries available, can provide an opportunity beneficial to candidates with the following backgrounds:

1. SYSTEMS ANALYST/TRAINER

- specific responsibilities will include analysis and design together with the training of applications oriented personnel working in DEC/VAX based systems.

2. SYSTEMS PROGRAMMER

- main responsibilities will include DEC/VAX hardware installation and software development for network systems.

3. SYSTEMS ENGINEER

- Installation and software support for WANG systems including SNA interface to IBM hardware.

4. PROGRAMMER/ANALYSTS

- to maintain and/or develop medium size mainframe business applications for conversion to run on a P.C. network for which PL/I, MVS, JCL, extended SPF and Mark IV is required. Knowledge of IBM P.C. and Micro networking/multi user operating systems with mini/micro networking hardware/software preferred.

The start dates are flexible, however, the client requires interviews scheduled over the next few weeks for which you should contact Caroline Tee on day, 01-493 2847 or evenings/weekends 01-455 0236 without delay for further application details quoting ref. 5057.

ALLTRONICS PEOPLE (AGY)

Control/Application Engineer
Bingham - Notts.

A current vacancy exists for an industrial control engineer, with a thorough knowledge of programmable controllers or microprocessors.

Ideally qualified to degree level, although ONC/HNC/HND qualifications with the relevant experience will be considered, the ability to program in ladder logic is an essential requirement. Additional knowledge of a computer language and/or in-depth experience of Allen Bradley, Modicon, IEC or GEC programmable controllers would be a distinct advantage.

We have a major involvement in the application of computers, graphic equipment, programmable controllers and communication networks to most industrial process control systems. In addition, we have the expertise to handle all facets of control, from conception through to customer acceptance.

Candidates must be dedicated and capable of working independently both at base in the highly attractive market town of Bingham and on occasional overseas assignments.

Salary is negotiable with benefits appropriate to a company of our standing.

If you feel that you can meet the requirements of this position, we look forward to hearing from you. Send a cv to Peter R. Clark, Haden Automation Systems Limited, P.O. Box 14, 7-12 Teviotstock Square, London WC1H 9JZ.

Closing date April 2, 1984.

EPSON

OPEN DAY

MARCH 20th

READING

EPSON cordially invite you to after-work refreshments at the Ramada Hotel, Oxford Road, Reading, Berkshire, on Tuesday March 20th. Not only refreshments but the chance to discuss what could be the most important career development opportunity for you so far.

EPSON have the largest share of the world market for Mini-printers, Dot matrix printers, and LCD's. We are also manufacturers of the HX20, the top selling business portable computer in the UK and are rapidly expanding our penetration of the desk top micro-computer market.

Since 1979, the annual turnover of the UK operation has risen to over £30M including a growth rate of well over 250% in the last year. This has been achieved by the relentless pursuit of excellence at every level from research and development through production to marketing.

We are now planning to launch many new and innovative products in the next 12 months and offer exceptional ground floor opportunities for specialist personnel at our UK headquarters in Wembley.

* Software Development Specialists - with UNIX, CP/M or MS/DOS, PASCAL, C, Z80 and 8086 experience.

* Operations System controller (VAX 750) with experience of a UNIX and LAN development environment.

* Technical Support Specialists - Applications - Software with Basic and CP/M.

* Technical Support Specialists - Hardware - with micro and peripherals experience.

* Senior Service Engineers - with inhouse and field service experience.

* Technical Trainer - Hardware/Software with qualified training background.

* Technical Product Managers for Printer and OEM products.

* Technical Author.

* Systems 34/36 Manager with ops, analyst/programming experience.

We look forward to seeing you on the 20th. If you have any queries please call our advising consultants, Craig Millar or Karen Whelan on 01-637 9611, or send your C.V. to the address below.

**MANAGEMENT &
EXECUTIVE SELECTION**

PUBLIC SECTOR APPOINTMENTS

UNIVERSITY OF CAMBRIDGE

DEPARTMENT OF ENGINEERING

COMPUTING

The Department is expanding its computing facilities and integrated computer-based teaching, a project made possible by a generous grant from IBM. Applications for the following posts are invited from candidates with a good honours degree in Engineering, Mathematics, Physical Sciences or Computer Science.

MANAGER OF COMPUTING

The principal responsibility of the holder will be to supervise the development and running of the department's major computing systems and to provide a computing service for teaching and research. The manager will be closely involved in the development of the department's new computer-based teaching project.

A minimum of 10 years' experience in practical computing and some managerial experience is required. Experience of interactive computing and an interest in the use of computers for teaching would be highly desirable.

The post is of Computer Officer Grade I or II, depending on age and experience, with salaries in the range £10,085 to £16,085 for CO I and £9,426 to £12,546 for CO II. The post is a permanent one with initial appointment for 5 years.

RESEARCH ASSISTANT

Applications are invited for 4 posts of Research Assistant. The principal duties will involve the development of the computer-based teaching system together with its appropriate range of applications packages and utilities.

A good honours degree, preferably with some postgraduate experience, and some experience of systems programming is essential; an interest in interactive computing and its use in teaching is highly desirable.

The salary is in the range £6,315 to £9,425 depending on age and experience. The posts are tenable for 3 years with the possibility of reappointment for a further 2 years.

Further particulars and application forms may be obtained from the Secretary of the Faculty Board, Department of Engineering, University of Cambridge, Cambridge CB2 1PZ, to whom applications must be sent by April 13. (8422)

CHORLEY BOROUGH COUNCIL
(AN EQUAL OPPORTUNITY EMPLOYER)
TREASURER'S DEPARTMENT
COMPUTER PROGRAMMER/ANALYST
Scale 5 £7,191-£7,896

Applications are invited for the above post from persons having some experience as a programme preferably, but not necessarily, in Local Government.

The Council is currently developing its computer system and has installed an ICL 2907 with a variety of terminals and an IBM link to Lancashire County Council. The RJE link will continue for current application, but future development, particularly non-linear, will be carried out locally.

The successful applicant will be responsible for some systems analysis plus writing, testing and maintaining programs, involving close liaison, in conjunction with the Data Processing Officer, with Senior Officers of other Departments. Programs will be developed in COBOL, BASIC and TMS. It would therefore, be an advantage if applicants had a knowledge of COBOL and TMS.

Application forms and further details are available from the Chief Executive Officer, Town Hall, Chorley, Lancashire PR7 1DP Tel: Chorley 68811 2289. Completed forms should be returned by March 22nd, 1984.

Completed forms should be submitted by any member of the Council will disqualify

FINANCE DEPARTMENT - COMPUTER SECTION

SENIOR ANALYST/PROGRAMMER
Salary Grade SO1/POA £9,060-£11,052 p.a. annum

A Senior Systems Analyst/Programmer is required to assist in maintaining and improving existing systems, in addition to developing a wide range of new projects.

The Council operates a Honeywell Level 84 D.P.S.2 with distributed terminals. The successful applicant must have sufficient systems analysis/design experience to lead a small team in implementing a project from feasibility study to operational running. Familiarity with 'on-line' concepts will be expected and experience of COBOL would be an advantage, as would a local Government background.

Commencing salary within the above salary grade will be dependent on age, experience and qualifications.

Assistance towards removal and relocation expenses will be available where appropriate.

A closed shop policy is in operation and all new employees are required as a condition of employment, to become a member of an appropriate trade union.

Application forms and further details are available from the Head of Personnel and Management Services, Town Hall, Darlington, Co. Durham. Telephone: (0225) 460801, extension 318. Closing date: Monday, April 2, 1984.

(8430)

UNIVERSITY OF CAMBRIDGE

DEPARTMENT OF ENGINEERING

COMPUTING

The Department is expanding its computing facilities and integrated computer-based teaching, a project made possible by a generous grant from IBM. Applications for the following posts are invited from candidates with a good honours degree in Engineering, Mathematics, Physical Sciences or Computer Science.

MANAGER OF COMPUTING

The principal responsibility of the holder will be to supervise the development and running of the department's major computing systems and to provide a computing service for teaching and research. The manager will be closely involved in the development of the department's new computer-based teaching project.

A minimum of 10 years' experience in practical computing and some managerial experience is required. Experience of interactive computing and an interest in the use of computers for teaching would be highly desirable.

The post is of Computer Officer Grade I or II, depending on age and experience, with salaries in the range £10,085 to £16,085 for CO I and £9,426 to £12,546 for CO II. The post is a permanent one with initial appointment for 5 years.

RESEARCH ASSISTANT

Applications are invited for 4 posts of Research Assistant. The principal duties will involve the development of the computer-based teaching system together with its appropriate range of applications packages and utilities.

A good honours degree, preferably with some postgraduate experience, and some experience of systems programming is essential; an interest in interactive computing and its use in teaching is highly desirable.

The salary is in the range £6,315 to £9,425 depending on age and experience. The posts are tenable for 3 years with the possibility of reappointment for a further 2 years.

Further particulars and application forms may be obtained from the Secretary of the Faculty Board, Department of Engineering, University of Cambridge, Cambridge CB2 1PZ, to whom applications must be sent by April 13. (8422)

Senior Systems Analyst

£12,555-£13,929

Systems Analysts (2)

£11,136-£12,894

The Council has recently approved an increase of 3 systems posts to undertake priority development of a major Housing system and is now seeking applications from suitably qualified computer professionals to join our expanded systems teams involved with Housing and other new developments.

The Senior post requires a minimum of 3 years' proven computer systems experience having successfully completed on target at least one major system combined with the ability to lead and control a system team of 1-4 staff. The Systems posts require a minimum of 2 years' systems experience having been responsible for successfully completing at least one system to target.

Experience of database software and TP systems will be an advantage. Opportunity is afforded to start right at the beginning of the Housing project which is likely to prove both challenging and exciting.

Software in use includes IDMS, TPMS, DDS and IDH, and an extensive network of nearly 200 dumb and intelligent DRS terminals is connected to the ICL 2972 VME/B system.

Conditions of service include a 35-hour flexitime week; 31 days' annual leave (plus 5 statutory days); and a season ticket scheme. As one of the largest London Boroughs opportunities for career advancement are excellent.

To discuss these positions informally please telephone Phil Collins (Development Manager) on 01-874 6464 ext. 210, or if you prefer, apply for an application form to Director of Finance, Town Hall, London SW18 2PU. Tel: 01-874 6464 ext. 410. All posts close 30th March, 1984.

NORTH WESTERN REGIONAL HEALTH AUTHORITY
Regional Treasurer's Department

REGIONAL COMPUTING SERVICES MANAGER
Salary Scale 27 £12,958-£16,824 per annum

Additional allowances up to £554 per annum may also be payable. This is a key post based at the Regional Computer Centre, Prestwich, Manchester, and the responsibilities include:

(a) development of integrated policies for the deployment and effective use of computer services throughout the Region, which covers the counties of Greater Manchester and Lancashire;

(b) acting as Secretary to the Regional Computing Committee;

(c) managing approximately 130 computing services staff;

(d) advising on choice of computer equipment.

Candidates should have wide experience in the management of large computer installations.

Application forms and job description from the Regional Personnel Officer, North Western Regional Health Authority, County House, Plessey South, Manchester M8 2LP, telephone 061-226 5454 ext. 425. Please quote reference number 28824. Closing date 30th March, 1984.

(8347)

ANALYST/PROGRAMMER

Grade S8/SO1 £8,154 to £9,680 p.a.

This is a temporary appointment for one year and applicants should have at least two years proven experience in specification and development of Cobol programs in ICL hardware. Experience with ICL DRS equipment and Fortran would be advantageous. The successful applicant will work as a member of a group providing computer support to the staff of the highways and transportation department. The work will be on a dual ICL 2980 running George 3 under DME and on ICL DRS equipment. The work will be predominantly the specification and development of management information systems relating to work of technical users within the department.

Commencing salary will be in accordance with qualifications and experience.

Application forms and further details are available from the County Surveyor, Northampton House, Northampton. Telephone 34533, ext. 5308.

Closing date for receipt of applications - March 30th, 1984. Please quote reference H434. Closing date: April 2nd, 1984.

PUBLIC SECTOR

GLC

Working for London

Systems Development in Traffic Control

The Council has recently approved a remote monitoring scheme for improved traffic control systems via a central monitoring computer system using an ETHERNET Local Area Network based on DEC equipment. Opportunities now arise for the following computer professionals to make a major contribution to this challenging project:

Senior Systems Specialist

To work with the contractor responsible for the remote monitoring system assisting, verifying, monitoring and reviewing the work on behalf of the Council. Participation in the specification and design of the system and contributing to software development will be important areas of responsibility.

A science or engineering degree plus at least 3 years' experience of real time systems and programming within a VAX/VMS or PDP/RXN environment is essential together with project management skills and a knowledge of database management systems.

Salary: £14,112-£15,675 inclusive.

Systems Analyst/Programmer

To assist in software specification, design and development. This may entail secondment to work with the contractor responsible for the remote monitoring system.

Applicants should hold a degree or equivalent in science or engineering with at least 2 years' real time programming experience within a VAX/VMS or PDP/RXN environment, or at least 5 years' programming experience of traffic control applications software.

Salary: £9,685-£12,042 inclusive.

For an application form, to be returned by 10th March 1984, write to: Transportation & Development Department, Greater London Council, Room 454B, The County Hall, SE1 7PB or telephone 01-713 7791.

These posts are suitable for job sharing.

The GLC welcomes applicants from all sections of the community, irrespective of their ethnic origin, colour, sexual orientation or disability, if they have the necessary attributes to do the job.

(level of appointment and starting salary dependant upon qualifications and experience. A National salary award is anticipated April 1984)

IN THE

DEPARTMENT OF COMMUNICATION ENGINEERING

AND

DEPARTMENT OF ELECTRICAL & ELECTRONIC ENGINEERING

Required to join a lively multidisciplinary group involved in:

(i) teaching undergraduates, including those on an MEng programme, and diploma students.

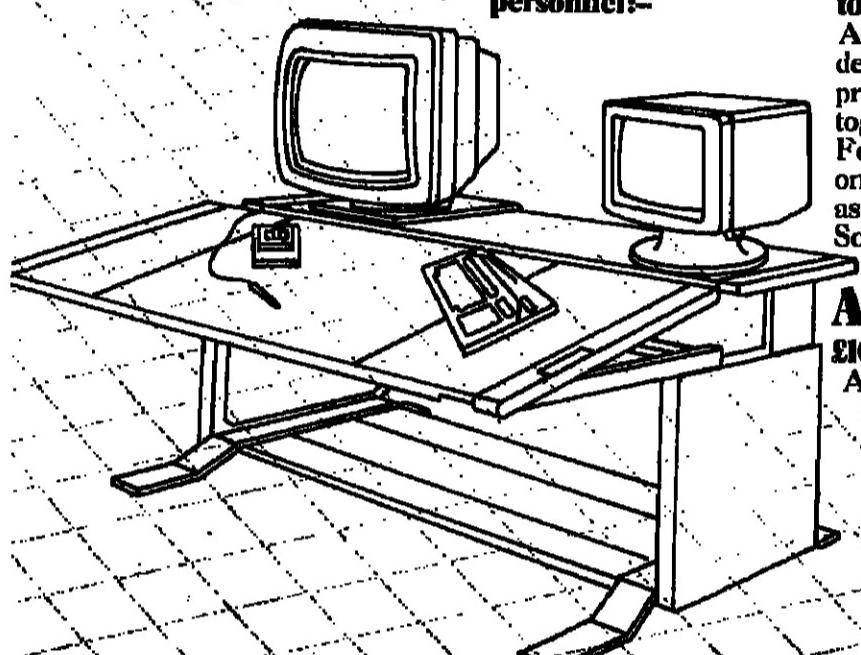

(ii) research and consultancy covering a wide range of activities as detailed by the post descriptions given below.

Applicants should hold a first degree in engineering or related discipline; together with relevant industrial, teaching or research experience.

Cambridge Interactive Systems Ltd., is one of the industry's most exciting and fast growing CAD/CAM companies. They are totally committed to a continued programme of research and development in the area of CAD/CAM, particularly 3D Modelling Techniques, Numerically Controlled Machine Tools, Sophisticated Database Techniques and the broadening of applications from Mechanical, Electrical, Civil and Architectural Engineering into other areas of industry. They have in-house, large Prime and Vax Mini-computers dedicated to this development work and these are networked to a number of other

Machines within the Organization. A wide variety of Graphics Display Equipment is installed for the development of Graphics Software.

To coincide with the introduction of a new and highly sophisticated range of Software products they have a need to recruit the following high calibre personnel:-

Medusa Product Support Manager £16,000

Responsible for the worldwide organization and support of the highly respected Medusa product, the successful candidate's responsibilities will include working closely with the development teams in the co-ordination and definition of product release schedules, liaison with customer field support organizations and the organization of training for field specialists. Additional responsibilities are the co-ordination of product development plans relating to marketing requirements, the organization of appropriate problems reporting and correction procedures and the co-ordination of product testing and documentation.

Development Programmers to £12,500

Applicants should have a good numerate degree, at least two years experience of programming in a technical environment, together with a good working knowledge of Fortran. Experience of Software development on VAX, Prime or Unix would be valuable as would previous exposure to CAD/CAM Software.

Applications Specialists £10,000 to £14,000

As part of the Marketing Group candidates will be responsible for promoting and exploiting Medusa in specific industry areas. The Applications Specialists will investigate market requirements in particular areas, specify enhancements to the system required by that market, liaise with the sales organizations and organize the production of special industry specific sales material, demonstration material and customization of Medusa.

Product Development Engineers to £12,000

As a Member of the Product Support Team you will be working closely with the Software Development Teams on the development, evaluation and testing of new CAD/CAM products. The post will include training field support staff in the use of new products together with developing appropriate user interface material such as menus, demonstration material and on-line instructional aids. Applicants should have at least two years experience of practical engineering preferably in a Drawing Office, Mechanical Design or NC environment together with some experience of working with Technical Software.

Technical Authors £10,000 to £14,000

Developing the technical documentation, training material and other support aids for CIS's wide range of CAD/CAM products. Candidates will be working closely alongside the efforts of the Software Development Teams. You will have a fairly deep understanding of both the Software being documented as well as the Drawing Office environment in which it will be used. Consideration will be given both to applicants who have previous documentation experience as well as those who have substantial experience in Engineering, Software Development or Field Support of CAD/CAM Systems.

For all of the above positions it is envisaged that applicants will be educated to either HND or Degree level, have substantial practical experience in a specific industry area such as Civil Engineering, Plant Design, Architectural, or Electrical Engineering together with a knowledge of current CAD/CAM technology. In addition to the excellent salaries and bonus offered, these positions represent unique opportunities to join a Company whose success to date far outstrips any of its nearest rivals.

SALES EXECUTIVE

High Basic Salary and Performance Related Earnings Leading to a Package:

c. £30,000 p.a. Plus Benefits and Car
Location – Bristol

The Company

We are one of the leading systems houses in the West Country, involved in supplying bespoke software on a project or turnkey basis to local companies. We have an impressive reputation, excellent capital funding and a sound development base from which to launch our future growth.

The Requirement

Due to the continuing expansion of our business we are eager to recruit an additional sales executive who will be closely involved with our management team in meeting the targets for expansion that we have set for the next 5 years. We consider it to be essential that prospective candidates should be able to demonstrate a successful track record and a thorough understanding of selling business solutions within the computer industry. They should be self motivated business men or women with an innate understanding of how to manage and meet individual and corporate goals.

The Job

Together with senior management, the successful candidate will be involved in developing our current sales strategy by building on the foundations of previous successes and initiating the contacts and procedures necessary for new business sales. The candidate will be able to draw on internal resources for all necessary support and guidance when presenting solutions to potential clients.

Location

We are based in Central Bristol close to Temple Meads Station with convenient car parking nearby.

For Further Details

Please contact our Branch Manager, Peter Johnston on 0272-215286 (office hours) or Malmesbury (0666) 840787 (evenings & weekends). He will be pleased to discuss this position further and to arrange for you to receive some background information about our company.

0272 215286

TOTAL SYSTEMS (Western)
LIMITED

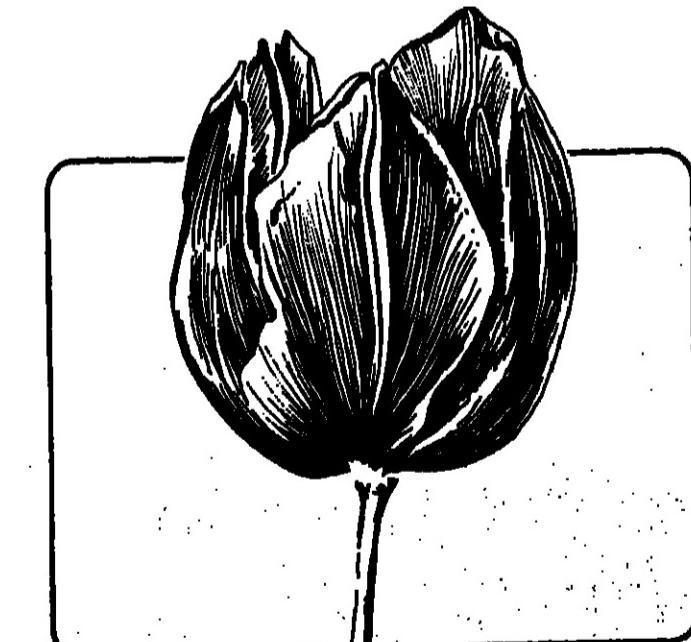

33-49 Victoria Street, Bristol BS1 6AD

Project Leader

Negotiable Salary

This position has arisen due to the increasing demands on the time of the Project Development Manager and the person selected will deputise for him in his absence. Candidates should have about 7 years' strong IBM experience and have been responsible for at least one major project. A good commercial background is essential and knowledge of library systems would be an advantage. Exposure to IDMS and Shadow II would be an asset.

HOLLAND

Analyst/ Programmer Library Systems

£11—£17,000

This opening offers the opportunity to become involved in important development work with strong emphasis on analysis. The ideal candidate should have between 3 and 5 years' analysis and programming experience, preferably in a DEC environment, although IBM would be acceptable. A good knowledge of COBOL is required together with a strong technical background. Experience of library systems is essential.

Relocation

A generous relocation package is offered to help candidates and their families settle in satisfactorily.

English, as well as being the working language of the installation, is generally spoken throughout Holland, which considerably eases settling-in problems.

IBM and DEC Installation

The organisation utilises large IBM hardware and multiple DEC computers and several on-line database systems are operational. In addition, a network with distributed databases at its offices in North and South America and Europe is being set up. COBOL is the main programming language.

Working Environment

The development team comprises a number of experienced analyst programmers who work individually on projects or combine into small project teams as the need arises. A high proportion of the staff is British and English is the working language of the installation.

Living in Holland

Many British computer staff work in Holland and it is in many ways the "softest landing" for those who wish to move to continental Europe. The client is located in a small town near the coast and accommodation in the area is not difficult to find.

Interviews

Initial interviews with the client's representatives will be held in the UK during April.

Contractors - What Will It Be? £----

No - we are not aiming for a mass rates explosion but our clients are in need of freelance programming and analytical support and the remuneration is very attractive.

Naturally, we would be more than interested to hear from any contractor who is now or shortly to be available but in particular our requirements are as follows:

Programmers with PL/I, IMS DB/DC and JSP experience

Programmers with NCR mini/mainframe, IMOS/IRX/VRX and COBOL experience

Programmers with Univac OS1100, DMS, TIP and COBOL experience

Analysts and analyst/programmers with banking/financial systems experience, preferably gained in an IBM mainframe environment.

Our clients are predominantly large organisations in the banking and insurance sectors who have extensive development plans and who offer excellent working conditions.

SALES EXECUTIVES FREEDOM TO BREATHE, ROOM TO GROW!

Many sales people never reach their full potential, because they are constantly frustrated by executive whim or stifled by corporate edict. How nice it is, therefore, to make available such jobs as these in

SOUTH EAST ENGLAND and the WEST MIDLANDS

that not only provide a 'ground-floor' opportunity within a fast growing and progressive organisation, but which also give the individual salesperson freedom of action, scope for creative selling and real involvement in shaping the destiny of the company.

Our client is a well-established name in both minicomputer-based turnkey systems and computer terminals and have secured some 25% of their specialist market. Such is the success, that all of their existing salespeople consistently achieve target. This is most likely due to the company's unusually high investment in advertising.

We are seeking three accomplished salespeople; one with significant experience of selling DEC-based commercial and industrial Turnkey Systems up to a value of say £200k, and two with a good track-record of selling Computer Terminals. In the former case, a pre-sales support analyst would also be considered. In the latter case, some exposure to DEC equipment will be advantageous, but not imperative, whereas a proven ability to communicate at a senior level is essential in both instances.

An attractive compensation package is negotiable, including a company car and a variety of fringe benefits with on target earnings of £22,000.

Please contact Lindsay Howie (London) or Roger Dodd (Midlands), quoting reference HSC/024.

SALES BIT

Installing a system is no small business for optimism

AS one who has sold a lot of business systems in his time, involving a variety of solutions from the installation of mainframe computers to the use of service bureau facilities, recently I have sustained the cultural shock of installing a microcomputer-based system for controlling company accounts.

What a revelation it has been, not only in terms of our own accounting procedures, but also in the realisation of the potential problems for small businesses which today are installing such systems without the benefit of understanding computers, appreciating systems design and, in many cases, having no full-time accountant to sort out the errors and exceptions that inevitably come to the surface when a computer is put into effect.

I am constantly horrified by the exploitation of the enormous gap

between superficial knowledge and total ignorance that is possible in some sections of the computer industry, but particularly where microcomputer-based business systems are concerned

natives I considered, the more they looked the same.

There were so many possibilities and permutations that their interaction served only to confuse.

I found myself in a "Gordian Knot" situation where the only way to untangle my deliberations was to cut it straight through the middle with a piece of pragmatic logic.

Having operated a manual accounting system for over eight years, I figured there were bound to be some problems with mis-postings, wrong analysis, compensating errors and the like, and the computer was bound to bring a few "nasties" to the surface. So, I figured I didn't so much need an analyst/programmer as an accountant to handle the challenge of dragging us into the world of electronic data processing.

I made a few enquiries in the locality of our Lichfield office to see if any of the local turnkey outfits employed qualified accountants as well as computer technicians. I soon discovered that this was not a common phenomenon.

But I eventually made contact with Robert Jones of Peach Data in Burton-on-Trent, himself a chartered accountant, and asked him over for a discussion on what his company could do for us.

He was soon able to identify areas of improvement in our procedures and report and pinpoint some of the eccentricities of previous book-keepers. We ironed out each problem as it arose and it was not long before the first profit and loss account was proudly presented.

The conditioning of a deprived youth coupled with the discipline of many years service with American corporations made me instinctively look at the figure in the bottom right-hand corner.

I knew instinctively that it was completely wrong!

Alan Williams

PUZZLE ANSWER

The square of $(n+1)$ is always $(2n+1)$ greater than n^2 . So 1985^2 must be $3,936,256 + 2(2 \times 1,984) + 1 = 3,940,225$.
